What in 1918 was just a modest stock broking firm, is today an institution that spans a diverse range of activities. An organisation that has grown from its first corporate brick into a gigantic industrial house, the core of a multifarious range of industries.

From plantations to textiles, fertilizers to heavy chemicals, from leasing and hire purchase to financial publications, and from engineering to the latest ventures into the fields of convenience foods and computers, Kothari's have blended their activities with efficiency and unflinching dedication. Dedication to the nation. To its people. To its tomorrow. Dedication that was translated into action not only by profitable activity on the industrial front but fruitful studies in the various research institutes, sponsored by Kothari's.

Kothari's. An Institution, where a glorious past has blossomed into a dynamic present. Whose future promises to transcend the limits of the horizon.

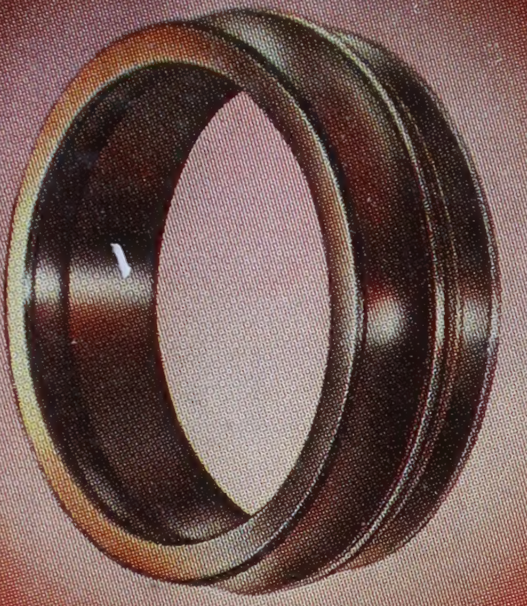
A circle of perfection



The Kunal R+F spinning ring

a product of Zero Defect technology

Manufactured to international standards in collaboration with Reiners + Fürst, West Germany, the Kunal R+F spinning ring is perfect for all applications–cotton, synthetic, woollen, worsted, tyre-cord and thread making.

Outstanding features of Kunal R+F rings.

* Consistently good operating behaviour due to high quality of raw materials.

* Unique heat treatment with Nitrogen diffusion gives rise to high resistance to wear with exceptional sliding property, ensuring easy running-in and longer traveller life.

* Tolerance limits for ovality, flange width, flatness, ring dia., etc., as per ISO. This results in low yarn breakage rates.

* Hundred percent check and destructive test on batches ensures ring to ring and batch to batch uniformity.

* Standard and elliptical profile in a well co-ordinated machining process, which makes the ring ideally suitable for 'C' and elliptical travellers available in the market, resulting in faster heat dissipation and better distribution of forces of the traveller on the ring.

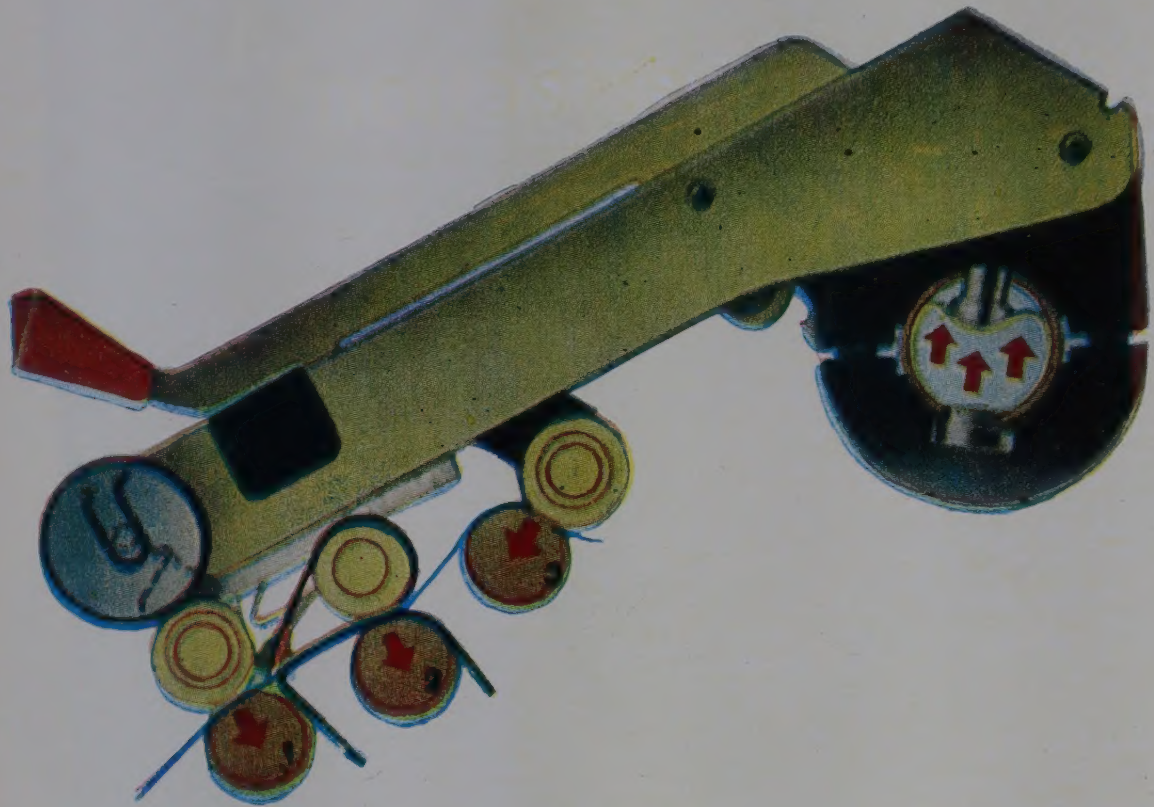
Better yarn, better profits

Kunal INA V Draft High Drafting System



1 upto 20 kgm　2 upto 14 kgm　3 upto 20 kgm

The technologically most progressive system for ring frames.

Advanced design features

- ✱ V Draft principle of fibre control.
- ✱ Increased guided distance for floating fibres in break draft zone.
- ✱ Available in two designs: * Mechanical loading * Pneumatic loading

A wide range of applications

- ✱ Caters to spinning of cotton and man-made fibres and blends, with: *Short cradle arrangement * Medium cradle arrangement * Long cradle arrangement * Slip draft system

Some down-to-earth advantages

- ✱ Improvement in yarn quality, better price for yarn.
- ✱ Coarser hank rovings; reduction in speed frame spindles and savings on cost for space, energy, labour and investment.
- ✱ Reduced number of hank rovings; simple production process and no confounded hank rovings.

Kunal INA V Draft High Drafting System is available for modernising old ring frames and original equipment with new ring frames.

Manufactured at

- ✱ **KUNAL MACHINERY MANUFACTURERS LTD.** in collaboration with INA WALZLAGER SCHAEFFLER KG, West Germany, equipped with high precision, CNC controlled modern automated machines.

Preface

Subscribers to this 35th Edition would have noted that the name of the book previously known as Kothari's Economic & Industrial Guide of India has been changed to Kothari's Industrial Directory of India and is being published by Kothari Enterprises due to reasons of administrative convenience. However, the change in name or the publisher has least affected the contents and the quality of the book widely known as Kothari's 'Investor's Encyclopaedia'. We have updated this edition with the same sincerity of purpose and eye for detail that dictated our efforts in earlier editions. We have added a detailed and analytical study of more than 200 new companies while eliminating a few of those for which Annual Reports were not available in spite of our repeated reminders to them. We have left no stones unturned to make our Directory as exhaustive as possible covering almost all major units in the Indian Corporate Sector. The Annual Reports of a few companies came too late to be included in the 15 sections under which the corporate units are classified; we have analysed them in the Supplement Section. Subscribers, unable to find the latest information on these companies may refer to this section and find additional information needed.

As is the case with our previous editions, we have made every earnest attempt to update all sections pertaining to the development and diversification of the Indian Corporate Sector.

We take this opportunity to place on record our deep sense of gratitude to our advertisers, without whose help, it would have been extremely difficult for us to carry on with the printing and publishing of a Directory of this enormous size and magnitude. We also wish to acknowledge the innumerable companies that have sent their annual reports which were the raw materials on which we were able to work on and serve in turn the investor and the corporate sector itself.

Lastly, we earnestly request our subscribers to let us have their considered suggestions for improvement of the directory. It will be our endeavour to incorporate such improvements in our future editions provided they are within our reach and convenience.

A. C. FERNANDO
Editor

Madras,

The most useful
and
up-to-date reference

EXPORTS
OF THE REPUBLIC OF CHINA
1985-1986

"Exports of the Republic of China" is your most authoritative, objective, and up-to-date directory to business in Taiwan, ROC. Compiled by a non-profit trade promotion organization, it lists a wide range of commodities and suppliers selected solely according to their annual value of exports The contents are brought completely up-to-date on a regular basis.

Jointly published by the Taipei World Trade Center Co. and the China External Trade Development Council, the latest edition, entitled "Exports of the Republic of China, 1985-1986" provides all the information you need to know about manufacturers and traders in the Republic of China Special features include:

Selective listings: Only those firms with annual export earnings in excess of US$200,000 for a single item (as defined in boxed-off titles in the directory) are listed. However, in the case of such commodity groups as musical instruments, paper products, houseware, specialty clothing, medical and pharmaceutical products and medical instruments and appliances, earnings of more than US$100,000 are considered sufficient for listing

Computerized data: All information is computerized after being checked and verified.

Convenience: Alphabetical listings in the Products' and Suppliers' indexes make it easy to find information.

Up-to-date references: Information listed is the most recent available,revised by the professional staff every year.

"Exports of the Republic of China" is undoubtedly a "Who's Who" of traders and manufacturers in Taiwan, ROC today It is an essential reference tool for all those doing business with Taiwan. To obtain a copy of "Exports of the Republic of China, 1985-1986," please send your order to

china external trade development council

(US$100 including airmail postage)

The most useful and up-to-date reference

IMPORTS

OF THE REPUBLIC OF CHINA

1985 - 1986

"Imports of the Republic of China" is your most authoritative, objective, and up-to-date directory to business in Taiwan, ROC. Compiled by a non-profit trade promotion organization, it lists a wide range of commodities and importers selected solely according to their annual value of imports The contents are brought completely up-to-date on a regular basis.

Jointly published by the Taipei World Trade Center Co. and the China External Trade Development Council, the latest edition, entitled "Imports of the Republic of China, 1985-1986" provides all the information you need to know about manufacturers and traders in the Republic of China. Special features include:

Selective listings: Only those firms with annual imports in excess of US$200,000 for a single item (as defined in boxed off titles in the directory) are listed. However, in the case of such commodity groups as musical instruments, paper products, houseware, specialty clothing, medical and pharmaceutical products and medical instruments and appliances, imports of more than US$100,000 are considered sufficient for listing.

Computerized data: All information is computerized after being checked and verified.

Convenience: Alphabetical listings in the Products' and Importers' indexes make it easy to find information.

Up-to-date references: Information listed is the most recent available, revised by the professional staff every two years.

"Imports of the Republic of China" is undoubtedly a "Who's Who" of traders and manufacturers in Taiwan, ROC today. It is an essential reference tool for all those doing business with Taiwan. To obtain a copy of "Imports of the Republic of China, 1985-1986," please send your order to:

Doing Business in Hong Kong ?

Start with DataBase Computerised Business Directories.

These directories provide the most accurate, complete and up-to-date business information available on the major companies in Hong Kong — the world's third largest financial centre and the gateway to China.

Produced directly from Hong Kong's largest information databank, the directories tell you who's who, who owns whom and what's what in Asia's leading trade and financial centre. Finding this data is hard enough in Hong Kong; it is virtually impossible overseas. Now DataBase Directories do the research for you. Each directory focuses on a single trade or industry. You can find the information fast and you can rely on it.

If you're interested in . . .

- **Airfreight agents**
- **Travel agents**
- **Banks**
- **Hotels**
- **Airlines**
- **Computer vendors**
- **Manufacturers**
- **Stockbrokers**
- **Exporters**
- **Importers**
- **Property**
- **Shipping**
- **Finance companies**
- **Japanese companies**
- **American companies**
- **Public companies**
- **Insurance underwriters**
- **and many more topics**

. . . then we'll have a directory for you.

GENERAL INFORMATION

ECONOMIC OUTLOOK

The year 1984-85 will go down in the history of Indian Economy as epoch-making, in more senses than one. Fast-moving political developments in the wake of the brutal assassination of Mrs. Indira Gandhi on October 31st, 1984, and the assuming of the office of the Prime Ministership by Mr. Rajiv Gandhi and with the interregnum marked by political turmoil and turbulence of the extent and nature that were never witnessed before, have brought about certain metamorphosis on the body politics and on socio-economic spheres. It should be said, however, to the credit of the resilient nature of the Indian political system and the Indian economy that these developments hardly destabilised their working.

The new Government has committed itself to 'improvement in productivity, absorption of modern technology and fuller utilisation of capacity'. This oft-stressed commitment is couched with a new meaning as reflected in the budget of 1985-86, which, while laying emphasis on growth, for the first time, has taken a long range perspective. The reduction in the effective rates of income and corporate taxes meets a long-felt need for facilitating larger internal generation of resources in the corporate sector and help ease the demand constraint and enlarge disposable incomes. The policy changes evolved in respect of industries such as textiles, automobiles, electronics and computers are welcome signs and the flexibility in product mix has facilitated achieving of the economies of scale and updating technologies. The new move to facilitate transfer of technologies, relaxation in the spheres of MRTP regulations, and the freedom for competition given to industries are steps in the right direction, which one hopes would be extended to as wide a spectrum of industry as possible.

The performance of the economy during the past decade has been better than that of previous decades since the country attained Independence. The past decade, for instance, has witnessed the growth in Gross National Product in real terms of around 4.4 per cent per annum as against an average 3.5 per cent of the previous decades. The average growth in GNP between 1981-82 and 1983-84 has been even higher around 5 per cent. With the better performance of the economy in 1984-85, the average annual increase in GNP during the Sixth Plan period would easily work out to reach the target of 5.2 per cent. The growth in population, on the other hand, has tended to decelerate to around 2 per cent, making the spread between economic growth and increase in population significantly larger to 3 per cent from just about 1 per cent upto middle of 1960s. If, as expected, some improvement in the spread is likely to materialise, the economy's overall performance will be better than in earlier years. The economic trends during the fiscal year 1984-85 have been, by and large, satisfactory even though the growth in GNP is expected to be just around 4 per cent as against 7.5 per cent in 1983-84. The repetition of the striking performance of 1983-84 obviously could not be expected either in 1984-85 or 1985-86 as that year being exceptionally good in agricultural production, had witnessed a spurt in farm output to as large an extent as 13.4 per cent.

The economic scenery on the eve of the Seventh Five Year Plan has been very encouraging with a buffer stock of foodgrains of about 29 million tonnes with the public distribution system and a reasonable level of foreign exchange reserves both of which are vital for the restoration and sustenance of price stability. There was also a noticeable improvement in the price situation during 1984-85, with the wholesale price index rising by 7.6 per cent on point to point basis against 8.9 per cent in the previous year. The growth rate of national income was 3.5 per cent to 4.0 per cent during 1984-85.

Domestic saving in India has grown commendably over the years. In the last couple of years saving has consistently accounted for more than 20 per cent of the national income. Net Domestic Saving which was only Rs. 5,099 crores in 1971-72 had risen to Rs. 31,031 crores by 1983-84 which is certainly a praiseworthy performance for a developing economy with very low per capita income. Of this, the household sector accounted for a creditable portion of Rs. 28,876 crores. However corporate saving continues to be low as compared to its potential. Private corporate saving and Public sector saving amounted respectively to Rs. 1,254 crores and Rs. 3,900 crores in 1983-84. Gross Domestic Capital Formation during the year was of the order of Rs. 46,700 crores against Gross Domestic Saving of Rs. 44,000 crores.

Foreign Trade

Though the balance of payment position is comfortable and reassuring, with the increased debt servicing obligations and the continuous need for essential imports, it has to be carefully watched and monitored. The trade deficit, which had been growing year after year, declined to around Rs. 5,200 crores in 1984-85 from a record level of almost Rs. 6,000 crores in 1983-84 providing a breather. This was, no doubt, largely because of a sharp spurt in exports by 20.3 per cent as against imports which rose only by 7.9 per cent. However, if one discounts the increase resulting from exchange fluctuations and the shipment of crude oil, which together accounted for nearly Rs. 2,717 crores, the export growth would work out to be not more than 7 to 8 per cent. Even the commodities which have been largely responsible for the increased foreign exchange earnings are highly income elastic and demand fluctuating. If exports have to provide the major thrust towards balancing of trade and payments gap, we have to place emphasis and indeed, go all out to export new and high value added products such as engineering and electronic goods, chemicals and so on. In many of these items of trade, India has a comparative cost advantage and can easily make a dent in the ever-growing world market. New products can be identified both in traditional and non-traditional sectors and with innovative product developments, keeping in view consumer preferences overseas, our exports can be stepped up significantly. The proposed body for promotion of exports of electronics and computer software should leave no stones unturned to get a fair share of the increasing world market for these items which increases by 25 per cent per annum. India has enormous potential in terms of rich natural resources, vast reservoir of highly skilled manpower and entrepreneurial capabilities of a very high order which should be exploited fully. We have to remodel our development strategy and make it export oriented if we have to balance our trade and payment.

Agriculture

On the agricultural front, the Green Revolution seems to be spreading to states beyond Punjab, Haryana, Western Uttar Pradesh, Central and Eastern Uttar Pradesh and even in parts of Bihar. It is now necessary to spread it to other parts of the country, particularly the South and the East, with due emphasis on breakthrough in rice output and production of oil-seeds, especially of the non-traditional variety like sunflower. Every attempt should be made to exploit grouwater, besides completion of a large numbof unfinished rrigation projects. Greater ation should be given to the maintenance and irs of existing irrigation works and power tions together with proper implementation oural Development Programmes with due ehasis on small and marginal farmers. The Snth Five Year Plan which has earmarked and Rs. 26,000 crores for the Integrated Rl Development Programme, the National Rl Employment and the Rural Labour Emplnent Guarantee Programme is likely to gener a considerable amount of newer activities in rural economy. Emphasis on agricultural proctivity and farm employment will also help thindustrial sector in overcoming the demand astraint which is being increasingly felt. Theast rural market should be made a harbinger f faster growth of the Indian economy. Besidespreading of the Green Revolution into newstates and newer crops, other areas that deserdue consideration by planners and administrors are dry-land farming and bringing unde the plough vast stretches of land that lie uncivated for want of irrigation. The proposed asteland Development Corporation should bebrought into being soon with adequate resourcs so that it could convert the cultivable lan into blossoming fields.

Industry

In the Industrial sphere, th Government should pay more attention to the roblems arising out of demand constraints which have inhibited the growth of Indian economy n recent times. One of the ways of boosting industrial demand would be to cut excise duties on a selective basis. The loss of revenue to the Government on this count in the initial period will be more than offset through increased demand and stimulated production in a short period of time. There are many industrial commodities on which levies of excise duties constitute about 25 per cent of the prices of those products, as for example, in Tyre, Paper, Plastics, Synthetic Fibres, Yarn and Textiles. Similar price cuts through reduction of excise duties would be helpful in raising demands in cases of commodities which are facing severe recessionery conditions and whose demand is highly elastic as in the case of refrigerators, air-conditioners, fans, two-wheelers etc. Increased demand would lead to better utilisation of existing capacities and would also fetch larger revenues. to the Government. An industrial growth of 8 per cent as envisaged in the Seventh Five Year Plan would require a huge amount of resources One of the way to reduce resource requirements is the reduction of customs duties on capital goods which are partly responsible for high capital-output ratio in India.

Small Scale Industries

Small scale industries make a giant contribution to the national economy. We have more than 12 lakhs registered and unregistered small scale units providing employment to more than 8 million persons. The total value of goods produced by these units has been estimated at more than Rs. 35,000 crores and is nearly 40 per cent of the total annual industrial production of the country. In the field of exports, this sector occupies a significant position. In 1983-84, for instance, the aggregate turnover of small scale units rose to Rs. 2,350 crores or by 120 per cent as compared to 1978-79. This sector accounts for nearly 25 per cent of the total value of exports during that year.

The small scale industry has exceeded the target for production and employment fixed for that year. There are other indicators which show extremely good performance achieved by the small scale industry. During the short period of five years ending 1983-84, production in this sector has recorded an increase of 65 per cent in real terms, employment has risen by 32 per cent and investment by 66 per cent.

The increase in the number of units as well as the value of investment in the small scale sector is phenomenal, and the number of units registered with the Small Industries Development Corporation (SIDCO) has more than doubled over the past five years. The value of investment in this sector amounts to approximately Rs. 7,400 crores which was 66 per cent higher than what it was in 1978-79. Even making due allowance for a fairly steep increase in prices of investment goods, the fact is that the phase of investment in this sector has been quite impressive.

Moreover, what cannot be signified in statistics is that, this sector has made good progress in regard to the quality and range of goods manufactured, though there is still further scope for modernisation. Initially, this sector was only producing relatively simple goods like soaps and detergents, now it has entered into sophisticated fields like electronics and computers, paper and plastics, mini cement plants and steel plants etc.

The success achieved in this sector is due to various factors. There has been a marked improvement in the availability of raw materials, both indigenous and imported. There has also been a spurt in the import licences issued to small scale industries and the list of items brought under OGL imports for actual users has been increased. The volume of credit available to the small scale units has also gone up considerably.

All this does not suggest that there have been no deficiencies and areas of weakness in the development of small scale industries in India. With the overwhelming growth in the number of small scale units, there is also a widespread sickness in the existing units. It is estimated that almost one fifth of the units are sick. There are various factors causing sickness in the small scale sector. Entrepreneurial development in India has been very limited. Most of the entrepreneurs available in this sector are technocrats who are not adequately trained to manage the enterprises resulting in poor management which is the bane of this sector. Problems of adequate and timely finance and financial indiscipline on the part of entrepreneurs coupled with ignorance of the facilities available, want of research and development facilities and the variable taxation policies of the State Governments often lead to sickness of the units. Further, actual availability of the scarce raw materials, in spite of the allotments made by the government to this sector, causes serious difficulties to the small entrepreneurs. Because of the shortage of critical raw materials and power, there is also gross under-utilisation of capacity leading to widespread sickness. Outdated machinery, lack of innovations and chronic labour problems are other hindrances in the growth of the small scale sector.

Although in the statistical sense there has been a considerable increase in the number of small scale units in all the states of the country, there is however, undue concentration of them in urban conglomerates and in the vicinity of the industrial complexes. More important than these, these units are located in highly industrialised states. That is to say, there has been no appreciable penetration of small scale industries in less advanced states or for that matter in the backward regions of the industrially advanced states.

New Economic Policy

A new era of progressive liberalisation has taken place with Mrs. Indira Gandhi's second regime in 1980. Mr. Rajiv Gandhi has taken this much further during 1984-85. With these measures, the country is entering a new phase of industrial and economic development where old approaches to planning and investment have lost much of their relevance. The recent initiatives taken to improve the economic climate reflect a new mood and a new style of the Government. The 1985-86 Budget has given a new thrust to the economy. It is growth, productivity, saving and investment oriented. It has, to some extent, rationalised the direct tax structure by making it simple and reasonable. Relief has been provided both to the corporate and non-corporate tax-payers.

The climate of investment and growth has been further improved by delicensing about 25 industries, increase in limit of MRTP companies from Rs. 20 crores to Rs. 100 crores, concessions to the small scale sector and ancillaries in respect of ceiling in investment in plant and machinery and raising the eligibility limit for excise duty concession together with introduction of slab rates, extension of new package of measures for computers other electronic items etc., are expected to boost the pace of industrial progress in the country.

The import-export policy announced by the Government early this year also marks a milestone in our effort at faster industrialisation. This policy, which has been announced for the first time for a three year stretch, will accelerate technological upgradation and modernisation while boosting external trade and stabilising export-import operations. The inclusion of 201 items of industrial machinery in OGL, increase in value limits of technological development fund to Rs. 100 crores, decanalisation of 53 items etc., are the other welcome features of the new import-export policy.

With a view to encouraging larger volume of production and to provide flexibility to the manufacturers to adjust their product-mix depending upon the market demand, the concept of broad-banding has recently been introduced by the Government in respect of machine tools, automobiles,electronics, textiles, chemicals and pharmaceuticals and a host of other items. Likewise, under the new textile policy, various curbs on expansion of existing capacity or setting up of new capacities in the mill sector have been removed. The new policy allows full flexibility for the use of man-made fibres and yarns while the pre-eminent role of cotton as the main raw material of textile industry would be maintained. Structural rigidities in the textile industry have largely been removed.

The present government also attaches a great deal of importance to the development of electronics and computer industries. The present policies applicable to electronics and computer industries contain a number of policy measures with a view to making these ' sunrise ' industries the harbingers of accelerated economic development.

The comprehensive long-term fiscal policy announced recently by the government goes a longway in establishing a favourable climate for stable expectations. The withdrawal of investment allowance from April 1, 1987 and the introduction of a new scheme of deduction upto 20 per cent of taxable profits if the profits are deposited with IDBI and other notified institutions, abolition of surcharge and surtax from the assessment year commencing from April 1, 1987, the continuation of the present rates of taxes on income for a minimum period of five years, introduction of a modified and more rational scheme in respect of capital gains, depreciation, national deposit scheme, a new value added tax (MODVAT) and duty drawback under the new policy framework, are all welcomed as they ensure a rational, simplified and stable fiscal system. By relating tax concession to net savings, the move towards expenditure tax is facilitated. Above all, this policy by lifting the ' veil of secrecy ' provides the basis for planning the future with cofidence. It also provides the incentive for savings both in the individual and the corporate sector.

These various policy changes and the efforts to check the generation of black money, simplification of procedures, stress on quicker decisions etc., augur well for the growth of Indian economy and would take her firmly into the threshold of the twenty-first century.

Climate for Investment

We have it on the authority of the World Bank that there is a considerable ' upsurge ' in industrial investments in India. The bank in its 1985 ' World Development Report ' has noted with satisfaction that the number of collaborations and the amount of foreign investment approved by the Government have risen significantly in recent years. According to the Bank, the major factors responsible for this healthy development have been, inter alia, procedure simplification, improved industrial policy environment, and favourable reassessment of India's economic management and prospects.

The Report has made pointed references to the changed thinking in Indian government circles in favour of foreign investment as an effective instrument to bring in new technologies, increasing exports and creating domestic employment. A string of policy relaxations have ensued as a result. Regulations have begun to be eased. New companies are offered various incentives with a view to reducing their potential tax liability in the first five year of their operations. Procedures governing inward investment and repatriation are being streamlined to avoid delay and remove irritants.

Foreign companies operating in India generally do well and several of them show a better return on capital than their principals abroad. It is partly because of the huge sheltered market and partly because of the great attachment the Indian investor has for foreign companies, whose shares get over-subscribed and quoted at high premia in stock exchanges. That foreign investment in India is profitable and compares very favourably with the investment in other industrially developed nations has been brought out in a number of studies. These reveal that the American companies in India have earned better returns than those operating in some advanced countries such as Canada.

Seventh Five Year Plan and Industry

India launched its Seventh Five Year Plan in April this year. This plan envisages a much increased role for the private sector in corporate industry than has been the case hitherto.

The target for industrial growth in the Plan has been set at 8 per cent per annum as against an average of 5 per cent growth during the Sixth Plan. The emphasis in the Seventh Plan is to be on food, productivity and employment. Increase in productivity is to be attempted in a concerted manner through modernisation and expansion. The Seventh Plan through its emphasis on employment can be expected to open up vast markets for industrial goods. The private corporate sector, thus, has a big challenge to meet. Foreign investors and collaborators can also take advantage of the immense opportunities ahead.

In the light of heavy investments involved, both in the public sector and private sector during the course of the Seventh Five Year Plan, and the paucity of resources, both in rupees and foreign exchange, the rationale for the emergence of a pragmatic attitude on the part of the Government is a certainty and is likely to lead to a quicker response to certain compulsions arising out of the constraints the economy is suffering from. As a result : (1) It is likely that new investments in heavy industries such as steel and aluminium where there exists a long gestation period and world-wide excess capacity, might be deferred. The Government might be interested more in the completion of on-going projects and removing the bottlenecks and helping modernisation ; (2) Because of the paucity of resources, the government is likely to permit and even encourage the private sector to play a much greater role in contributing to the growth of the economy than hitherto, provided, it can generate internal resources without recourse to the financial institutions. This policy change, in fact, is already taking shape with power generation and oil exploration being considered for active involvement of the private sector as against the traditional policy of these being handled only by the public sector. The buoyancy in the capital market noticed in recent times will help them to do so ; (3) To contain inflation and to meet the public aspirations, the corporate sector may be permitted to come into wage goods sector and a number of items now reserved for small scale sector may be dereserved ; (4) In order to extend the phase and extent of the Green Revolution, and to meet the shortages in vegetable oil, pulses, timber, firewood etc., the corporate sector might be encouraged to enter agriculture, horticulture, and forests and to deploy its financial resources, managerial skills and scientific inputs ; (5) The need to generate employment and conserve scarce resources is likely to lead to a greater emphasis on larger and medium industry and on the services sector ; (6) With the economy growing at about 4 per cent per annum over the next few years, there is likely to be a corresponding growth in demand for consumer goods and consumer durables. The extension of TV and other forms of communication is likely to increase the demand for goods in the rural sector ; and (7) Export of goods and services, where India has comparative cost advantage, will lead to a special stimulus to those with increasing capacities to generate exportable surpluses and the removal of fiscal and other impediments on a long term basis. This effort will lead to the concentration on a few selected promising areas ensuring high quality, attractive packaging, acceptable delivery, adequacy of supply and a strong home market basis providing economies of scale and competitive cost.

Indian Industry and the Twenty-first Century

The new style and mood of the present Government, the measures of liberalisation initiated so far and the desire to move into the twenty-first century have released pend-up and so far constricted energies of industrialists and entrepreneurs to consolidate their gains and lead forward. However, there are a few formidable barriers that might check our onward march to the twenty-first century. The most worrisome of these is the size and growth of our population. By the end of this century, it will have reached more than a billion. It will be well past the middle of the twenty-first century, before we could manage a population growth rate of less than one per cent. Another equally disturbing feature is that by the beginning of the 21st century, more than 30 per cent of our total population or an incredible number of 350 to 400 million people will be living in urban conglomerations with its attendant evils of overcrowding, congestion, lack of civic amenities, ecological imbalances etc.

Another factor that is the result of our population explosion is the problem of abject poverty of a large mass of our population. By the year 2000 A.D., we will have the stupendous task of pulling them out of their abysmal poverty, mass unemployment and prevent the mass migration from the rural to the urban sector that destroys both the spirit of growth and the physical quality of life.

While every earnest attempt should be made to attack squarely the problems of over-population and mass poverty on an existential basis, it is also necessary to increase the rate of economic growth as speedily as possible to solve them on a long-term basis. While agriculture, cottage and small-scale industries have to be encouraged so as to provide the means of livelihood to the growing population, it is also important that we do not lose sight of the desideratum to boost the heavy industry which alone could provide a basis for long-term balanced multi-sectoral development. The basic philosophy of Pandit Nehru in making the economy heavy industry and infrastructure oriented is basically sound and has successfully withstood the tests of time. In order that heavy industry is encouraged to grow and bear more fruits, it is necessary that we embark upon a policy of technological imports with a view to enhancing the overall productivity.

In the next one and a half decades that lie between today and 2000 A.D., it is only through increased productivity that we can achieve our cherished goal of accelerated economic growth. For the realisation of increased productivity, it is technology and management that make the maximum contribution. Technological research in the country is too often directed towards finding indigenous technology to reduce the imported technology. It would be desirable to shift the focus on research to the most basic task of improving productivity, discovering ways of minimising capital, energy and other scarce resources. Further, a more liberal attitude towards import of technology which is calculated to improve productivity should be adopted. To improve the performance of management, education should be updated with a view to giving an orientation towards running a profitable enterprise within the conditions under which it is being operated. Greater attention should also be paid to management in the public sector, get the best men available and give them the requisite freedom from bureaucratic or ministerial interference in the discharge of their responsibilities. Again, it is not only managements that should be conscious of the need for increased productivity but labour should also contribute its mite towards this end. Labour laws and maintenance of industrial relations should be on the basis of compensation linked to productivity. This should be done not with a view to denying labour what it deserves but more with a view to getting the best of our manpower resources. Labour should also be briefed on the benefits of the economies of large-scale production and the fact that as a result of improvement in productivity they are not likely to suffer.

The importance of productivity needs to be recognised and reflected much more than it has been in the formulation of plans and in the critical debates which follow their presentation. Planning has so far concerned itself primarily with new investments to attain certain targets of output. Getting more out of investments already made in the previous plans is not treated as a part of the plan exercise and the resources needed for the purpose have to be found elsewhere outside the plan. We have the sorry spectacle of new power plants being put up while the power generation of the existing plants is far below their capacity because resources to improve the performance including replacement of wornout equipment or buying of spare parts, may be lacking. This happens in other fields as well, such as steel plants etc. If the productivity has to be improved outlays in different sectors should be determined not on the basis that they must give importance to new projects only but with due regard to the possibilities of fulfilling production targets, partly by improving the productivity of existing projects and partly by setting new ones. If such an attempt is made, the growth rate can be stepped up substantially with much less additional resource mobilisation. In short, our plan should be more productivity-oriented rather than investment-oriented.

Another area that requires our serious attention is in the area of infrastructural bottlenecks. Of all the constraints, the infrastructural bottleneck is the most immediate and also the one, most easily handled. Inadequate production of vital intermediates like steel, power, coal and cement, severely constraining industrial growth in periods when demand is buoyant, is only partly due to insufficient investment in the past. The most significant reason is the low level of utilisation of existing capacity that calls for, among other things, better management and a minimum of balancing investments. In the steel industry, for example, utilisation averaged 65 per cent over the last five years. And in the case of the thermal power sector, the plant load factor stood at less than 50 per cent over the last two years. The performance of industries depends, to a large extent, on the availability of infrastructural support and it is imperative that we should, apart from multiplying our investments on new units, strive our best to make the existing ones work as efficiently as they should, removing the hindrances that afflict their fuller capacity utilisation.

To conclude, it is no exaggeration to say that the country with its immense potential and untapped reservoir of resources, both human and material, can march confidently to be a great industrial power in the twenty-first century. The liberalisation measures recently being pursued by the government to import sophisticated technology, giving a boost to the electronic and computer industry, revamping of our archaic educational system and the relaxation in the sphere of industrial licensing and MRTP Acts are all likely to help us reach our goal sooner than it would have been otherwise possible. Added to this, the various anamolies in the country's economic policy frame should be removed and the industry and the government should jointly have a look at the controls with a view to reducing them. With a more rational policy and better management of resources within the spectrum of the ever-widening domestic and export markets, it is not an impossible dream to make the twenty-first century truly belonging to India !

ECONOMIC SURVEY

Summary of the Pre-budget Economic Survey on the performance of the Indian economy during the year 1984-85.

The financial year 1984-85 assumes special significance, being the terminal year of the Sixth Five-Year Plan. Impressive achievements recorded during this year contribute significantly towards the achievement of the plan targets. The expected increase in GNP during the year is 4 per cent and with this, the Sixth Plan targets of annual average growth rate of 5.2 per cent for the five year period would be realised. Rise in per capita income for the quinquennium is estimated to be around 3 per cent per annum.

The five year period covered by the Sixth Plan has witnessed an acceleration in foodgrain production, a quickening in the pace of industrial growth in the last two years and major improvements in the key infrastructural sectors of power and oil production. This expansion in production and production potential was achieved simultaneously with a reduction in inflation and marked improvement in the balance of payments position. The achievements are particularly impressive in view of the unfavourable external environment which has forced most developing economies into a period of decelerated growth.

Agriculture : Despite unsatisfactory weather conditions with an erratic south-west monsoon and inadequate winter rains, foodgrains production is likely to reach the record level of the previous year. Overall agricultural production is ever expected to show marginal increase over the previous year's peak level.

Thus the exceptionally strong performance of the year 1983-84 is being sustained during the year 1984-85, even in the face of adverse weather conditions. This is an indicator of the strengtheing of the production base of Indian agriculture. Analysing the trend, it may be pointed out that there has been an acceleration in the growth rate of foodgrain production in the Sixth Plan period. This has been achieved through the determined pursuit of the strategy of augmenting the supply of critical inputs, notably irrigation and fertilizers.

Infrastructure : Energy and Transport, the major infrastructural sectors recorded good performance during 1984-85 and were broadly supportive of an accelerated industrial growth. Power generation recorded satisfactory growth. Generation of power during April-December 1984 was 13.5% higher than in the corresponding period of the previous year. This represents an accelerated growth and is significant in the face of the performance in the preceding years—The growth rate in generation had decelerated to 6.6% in 1982-83 and shown only a modest recovery to 7.6% in 1983-84. However, it must be noted that the pace of additional generating capacity had slowed down. Coal production registered an accelerated growth rate as compared to 5.8% in 1983-84. However, the rate would fall short of the targeted growth rate of 10%. Crude Oil production which had reached 26 million tonnes in 1983-84, has risen to higher levels.

Industry : It is expected that the rate of growth of industrial production would reach 7% in 1984-85 as compared to 5.5% in the previous year. This would bring the average annual growth rate for the Sixth Plan period to 6%. This is a modest improvement over the growth rate of 5.3% achieved during the previous five years. It is essential that this rate is stepped up for the continued growth of the economy. In this context, it may be observed that the initiative taken by the Government of India in the past couple of years to liberalise policies and streamline procedures would augur well towards increasing efficiency and expanding production.

Prices : The first half of 1984-85 witnessed a continuous inflationary trend. The price index rose by 7.4% in the first five months, perhaps as a spill over of the previous year's price spiral by 8.3%. However, there was a marked improvement in the later part of the year, reflecting higher production and effective supply management. By February 9, 1985, annual rate of inflation as reflected in wholesale price index had declined to 4.6%. Inflation rate as measured by consumer price index was also down at 5.2% from the prior year level of 12.5%.

Fiscal and Monetary Policy : Policy in 1984-85 was mainly tuned towards maintaining the difficult balance between the need for greater plan expenditure to meet the targets in the Sixth Plan and the need to contain inflationary pressures.

Monetary policy was formulated against the background of high growth rate in money supply (M_3) and reserve money in the previous year. Efforts to reduce the rates of expansion in these monetary aggregates included a two phased increase in the statutory liquidity ratio, maintenance of the incremental cash reserve ratio and the raising of the cut-off point for food credit, beyond which 100% refinance is made available. However, M_3 grew at a slightly higher rate until January 1985 than in the corresponding period of the previous year. This is perhaps attributable to the increase in net bank credit to government which was more than anticipated and the enhancement of the net foreign assets holdings of the banking system.

Balance of Payments : The country's balance of payments position continued on a steadily mproving course. The government voluntarily terminated the IMF arrangement effective from May 1, 1984 after drawing SDR 3.9 billion out of the 5 billion facility made available to it. Despite the cessation of IMF withdrawals in the current year, foreign exchange reserves including gold and SDR's increased by about Rs. 547 crores upto end of January 1985.

Problems and Prospects : Agricultural performance will have to show continued improvement if the economy is to grow at 5% per year in the Seventh Plan. For this, considerable agronomic potential for increasing the paddy yields in the eastern and southern regions has to be realised. Also there will have to be sustained increase in production and yields of pulses and oilseeds. This may call for a major breakthrough in technology.

With the diversified industrial base in existence in the country and the large domestic market for industrial products together with the ready availability of manpower and entrepreneurship, Indian industry has the potential to grow at a rate of 8—9% per year. A fresh look at the structure of industrial and trade policies should certainly serve to provide the necessary momentum in the desired directions.

The Pre-budget Economic Survey 1985 emphasises the importance of public sector enterprises for generating the resources required for the plan. These enterprises however, have to strive for such achievements operating within the constraints of difficult outlook for concessional external finance and consideration of price stability. Prevailing circumstances also call for much greater fiscal discipline, tighter programming and monitoring of public expenditure, greater circumspection in providing subsidies and minimising, if not, eliminating state overdrafts.

With the prospect of external assistance not very promising, we require greater vigil on the balance of payments front. It has to be remembered that we have already made use of substantial external financing on commercial or near-commercial terms, the debt service ratio is bound to rise further as repayment obligations fall due.

It is essential to keep future commercial borrowings within the strict limits of prudent debt management. Against this background, acceleration of exports acquires prime importance. To achieve this, the government must give appropriate incentives. The industry, for its part must respond with a general upgradation of cost-effectiveness and product quality.

INDIA UNDER THE PLANS

It is a well-known fact that in the last three decades, we have built the foundations of a modern, self-reliant economy through our plans. We have achieved self-sufficiency in food, diversified our industrial structure and made significant progress in science and technology. The continuity of the planning process with its thrusts and checks, has helped us to create and renew national assets and to take up programmes for the amelioration of the weakest strata and the uplift of the most backward regions. Through the years, it was the endeavour of the planners that economic growth should be balanced, that it should ensure self-reliance, stability and social justice and that there is no discrimination between various sections.

India began the process of planned development with the start of the First Five-Year Plan in April 1951. The central purpose of planning was identified as that of initiating a process of development which will raise living standards and open out to the people new opportunities for a richer and more varied life. The manner in which this purpose has been translated into specific objectives has varied from plan to plan. The basic objectives fall under four broad heads : growth with stability, modernisation, self-reliance and social justice. In one form or another, but with varying degrees of emphasis, these objectives cover all sections of the population and represent a national consensus on the aims of planning.

The growth of the economy during the planning era has to be judged in the context of the prolonged period of stagnation that preceded Independence. The trend growth rate, for undivided India in as long a period as 1900-46, of the national income was 1.2 per cent, of agricultural production 0.3 per cent and that for industrial production 2 per cent. One of the most significant achievements of our development policy under the plans is that, this handicap of stagnation was overcome and the process of growth initiated. Between 1950-51 and 1978-79 (i.e. upto the end of the Fifth Five-Year Plan) the underlying trend rate of growth of national income was 2.5 per cent, of agricultural production 2.7 per cent and of industrial production 6.1 per cent. Happily however, this secular trend has been broken and the Fifth and Sixth Five-Year Plan periods have witnessed over 5 per cent growth rates. Though the efforts put in were phenomenal and the task undertaken stupendous, the achievements in per capita terms were modest. In per capita terms, income has grown at a trend rate of 1.3 per cent which, after allowing for the rising share of investment in national income, has meant an annual rise of only 1.1 per cent in per capita consumption.

The rate of growth of national income has generally ranged between 3.5 per cent, except during the Third Plan, in the last year of which the economy was hit by a severe drought. This is a significant achievement. However except during the First, Fifth and Sixth Plans, the growth rates have been below the targeted levels. The growth performance of the economy in different plan periods is presented below :

India's Growth Performance Under the Plans

Plan	Targeted Growth rate	Actual Growth rate
First Plan ..	2.1	3.6 (national income)
Second Plan ..	4.5	4.0 (national income)
Third Plan ..	5.6	2.2 (national income)
Fourth Plan ..	5.7	3.3 (net domestic product)
Fifth Plan ..	4.4	5.2 (gross domestic product)
Sixth Plan ..	5.2	5.2 (gross national product)

Plan	National Income	Agricultural Production	Industrial Production	Per Capita Consumption	Gross Fixed Investment
First Plan (1951-52 to 55-56) ..	3.6	4.1	7.3	1.7	3.0
Second Plan (1956-57 to 60-61) ..	4.0	4.0	6.6	1.8	5.8
Third Plan (1961-62 to 65-66) ..	2.2	—1.4	9.0	0.1	8.7
Annual Plan (1966-67 to 68-69) ..	4.0	6.2	2.0	2.0	1.5
Fourth Plan (1969-70 to 73-74) ..	3.3	2.9	4.7	0.4	3.1
Fifth Plan (1974-75 to 78-79) ..	5.4	4.2	5.9	2.3	6.6
Sixth Plan (1980-81 to 84-85) ..	5.2	7.2	5.9	N.A.	N.A.

Thirty-four years of planning has launched us firmly on the path towards progress. Power generation capacity has grown more than 17 times from 2.3 million kw in 1950-51 to over 40 million kw now. The number of villages electrified has risen from 3,000 to 3,40,000 during this period.

The index of industrial production with 1970 as the base has increased from 29.7 in 1950-51 to 173.8 in 1982-83. The country now ranks among the top 10 producers in the world in respect of cotton yarn, scooters, coal, sugar, rayon, fertilizers and cement.

PLANNING IN INDIA—THE PLANS AT A GLANCE

Five-Year Plan & Period	First (1951-56)	Second (1956-61)	Third (1961-66)	Annual Plans (1966-69)	Fourth (1969-74)	Fifth (1974-79)	Sixth (1980-85)
OBJECTIVES	1. Correcting the disequilibrium in the economy caused by war and partition	1. A sizable increase in National Income so as to raise the standard of living	1. To increase the National Income by 5% per annum	To meet the situation created by : 1. The Indo-Pak conflict	1. To raise the standard of living (speccially in enlarged income for weaker sections) with 5.5% annual increase in National Income	1. To achieve self-reliance	1. Higher growth rate of the economy
	2. To initiate simultaneously a process of balanced development	2. Rapid industrialisation	2. To achieve self-sufficiency in foodgrains	2. Two successive years of severe drought	2. To speed up production on all fronts	2. To adopt measures for raising consumption standards of the people living below the poverty line	2. Efficient use of resources and improved productivity
	3. To build economic overheads	3. Expansion in employment opportunities	3. To expand basic industries to become self-reliant in industrial requirements	3. Devaluation of the rupee	3. Provision of employment and education	3. To bring inflation under-control	3. Strengthening the impulses of modernisation for achieving economic and technological self-reliance

	4. Increasing productivity	4. Reduction of inequalities	4. To bring about full employment	4. General rise in prices	4. Reduction in economic inequalities and removal of concentration of power and wealth	4. To achieve stability in the economic situation	4. Progressive reduction in the incidence of poverty and unemployment
	5. Reduction of inequalities	5. To move towards the ideal of socialistic pattern of society	5. Reduction in inequalities	5. Erosion of resources available for the plan, there was a break in our perspective planning and thus three annual plans were undertaken	5. Reducing the foreign aid to half and thus aim at becoming self-reliant	5. All these objectives to be achieved within the general objectives of removal of poverty and increased employment opportunities	5. Speedy development of indigenous source of energy conservation and efficiency in energy use
	6. To meet food crisis						
	7. To check inflationary pressures

PLANNING IN INDIA—THE PLANS AT A GLANCE—(*Contd.*)

Five-Year Plan & Period	First (1951-56)	Second (1956-61)	Third (1961-66)	Annual Plans (1966-69)	Fourth (1969-74)	Fifth (1974-79)	Sixth (1980-85)
ASSESSMENT	1. The National income increased by 18%	1. Steel Plants were set up at Durgapur, Bhilai and Rourkela	1. On an average the National income increased by 2.2% p.a. instead of 5.6%	**1966-67** The National income increased by 14.7% at current prices.	1. The average annual compound rate of growth has been about 5% as against the target of 5.6%	1. The annual growth rate for GDP was 5.2% against the targeted 4.4%	1. Growth in national income averaged 5.22 per cent, marginally exceeding the target of 5.2 per cent.
	2. Per capita income increased by 11%	2. National income increased by 20% instead of 25%	2. Per capita income increased by 1.8% per year instead of 3.2%	**1967-68** Onset of the Green Revolution. Food production was 98 million tons. National income increased by 9% instead of anticipated 12%. Industrial Sector was gradually recovering from recession.	2. Food production has acquired the flavour of crisis.	2. The target was achieved in foodgrains production. Performance in all other key sectors such as coal, cement, sugarcane, paper, steel and electricity was below targets fixed.	2. There was a pronounced rise in agricultural production in four out of the five years. The average growth rate was 7.2 per cent for the plan period as against 2.7 per cent for the last 35 years. Foodgrains output rose commendably, exceeding targets and aiding a comfortable buffer build-up. Progress in cash crops was uneven ; except

PLANNING IN INDIA—THE PLANS AT A GLANCE—(*Contd.*)

Five-Year Plan & Period	First (1951-56)	Second (1956-61)	Third (1961-66)	Annual Plans (1966-69)	Fourth (1969-74)	Fifth (1974-79)	Sixth (1980-85)
							cotton, the other major cash crops, viz. jute, sugarcane and oilseed continued to record deficiencies.
	3. Rate of investment increased from 5% to 7.3%	3. Annual rate of growth remained at 3.5% instead of 5%	3. Shortfall in food grains production because of failure of monsoon and non-availability of agricultural inputs.	**1968-69** Signs of recovery. Industrial output rose by 5%. Exports rose by 9%. National income registered an overall increase of 4% over the 3-year period. Industrial production rose by 2% and agricultural production by 6.2%.	3. Prices have risen sharply.	3. The Fifth Plan had made no dent on the unemployment problem. The objective of wiping out the backlog of unemployment by the end of the Fifth Plan remained unfulfilled.	3. The average increase in industrial production was 5.9 per cent against the target of 8.10 per cent. Crude output showed a spectacular rise to 29.60 million tonnes against the target of 21.60 million tonnes. However coal output will be 10 per cent below target at 148 million tonnes. While cement industry's performance was outstanding with a

						growth in production of 84 per cent, steel, aluminium, textiles, heavy chemiclas and others have not fared well due to shortage of power and sluggish demand.
4. The physical targets were surpassed. Food grains production increased by 20%. Irrigation was provided to 16 million acres of land. Index of industrial production rose to 139 giving an annual growth rate of 8%	4. Per Capita income increased by 9% instead of 18%	4. Industrial production increased at the rate of 5.7% per year instead of 14%		4. Problem of unemployment has worsened.	4. The Plan period recorded an average increase of 5.4% in national income but the supply of foodgrains and other wage goods did not increase commensurately.	4. Addition to power generating capacity was only 14,500 MW against the expected increase of 19,600 MW. A persisting parer deficit of 10 per cent has been a bottleneck in fuller capacity utilisation in industry.
5. The general price level declined by the end of the plan by 13%	5. Area of inequality widened	5. The problem of unemployment worsened.		5. The area of inequality has been widening	5. The general price level increased by 33.5% while the consumer price index shot up by 33.2%	5. During the Sixth Plan period the average annual inflation rate (on a point to point basis) was 8 per cent in terms

PLANNING IN INDIA—THE PLANS AT A GLANCE (*Contd.*)

Five-year Plan & Period	First (1951-56)	Second (1956-61)	Third (1961-66)	Annul Plans (1966-69)	Fourth (1969-74)	Fifth (1974-79)	Sixth (1980-85)
							of wholesale price index and 9.5 per cent in terms of consumer price index. Prices were generally under pressure throughout the period, but there was a definite easing in the latter half of the terminal year.
	6. However unemployment continued.	6. Price level started rising	6. Inflationary pressures set in.		6. Population continues to explode.		
	7. Area of inequality widened.	7. Balance of payment was adversely affected. Our foreign exchange balances came down from Rs. 700 crores to Rs. 100 crores.	7. Situation on food front worsened.		7. The per-capital real income has declined with the sharp decline in the value of money.		
		8. Unemployment problem worsened.			8. Thus there is a wide gap between planning and performance.

SEVENTH PLAN

(Approach Paper)

At the threshold of the Seventh Plan, the nation finds itself in a position where there are compelling reasons for shifts in emphasis and re-ordering of priorities that would distinguish the Seventh Plan from the preceding Plans. The achievement of self-reliance in food grains was, till the decade of Seventies, viewed with much pessimism; it is now an established reality. The hesitant first step towards liberalisation has now acquired a new firmness and a definite direction. Even the balance of payments situation has acquired a measure of stability.

The guiding principles of the Seventh Plan are stated as growth, equity and social justice, self-reliance, improved efficiency and productivity. The Seventh Plan aims at an average growth rate in NNP of around 5 per cent.

The agricultural sector is to aim at an overall growth rate of around 4 per cent per annum; food production is to grow at 5 per cent, and sustained self-sufficiency will be aimed at. Rapid advance in agricultural production is the central strategy of the Plan which aims at greater stability and smoothening out of annual fluctuations. The pattern of growth in this sector would be to reduce inequality by concentrating on specific target groups such as small and marginal farmers and agriculturally backward areas. The approach paper also calls for special efforts to secure a varietal breakthrough and accords high priority for production of pulses and oilseeds.

Besides foodcrops, the paper stresses the importance of development strategy for accelerated production of milk, eggs, meat, fish, marine products, fruits and vegetables for improving nutritious status of people. Production technologies for export crops would have to satisfy both cost effectiveness and social cost considerations so as not to increase the draft on scarce inputs like irrigation water, fertilizer, special chemicals as well as credit. Small holders will b encouraged to grow export crops.

Underscoring the importance of irrigation expansion, the approach paper envisages key roles to states in the area, while the Centre would concentrate on command area development in order to reduce the existing gap between creation and utilisation of irrigation potential.

The Seventh Plan gives great emphasis to the expansion and consolidation of infrastructural facilities. Investment in the transport sector, particularly Railways is likely to be enhanced considerably. Schemes to boost coal and power output will also be accorded priority. Greatest attention is being paid to poverty alleviation programmes such as Integrated Rural Development Programme, National Rural Employment Programme and Rural Landless Employment Guarantee Programme. These schemes will be expanded and implementation streamlined to provide optimum benefit to those covered.

The document makes an assumption that the savings rate would reach a peak level of 26 per cent in the terminal year of the Sixth Plan, at which level it would stabilize. An aggregate investment of the order of Rs. 3,20,000 crores, public investment of Rs. 1,50,000 crores and public sector outlay of Rs. 1,80,000 crores are envisaged over the five year horizon. Industrial production is given a target growth rate of 8 per cent per annum.

A new thrust area is the exploitation of mass media especially television for realising a variety of objectives ranging from technology diffusion to social justice. These are to provide 'an opportune amplification factor and must be fulfilled appropriately to fulfil this function'.

In a nutshell the plan priorities have been stated as food, work and productivity. The strategy outlined is a combined effort for higher agricultural growth and creation of employment, improvement in efficiency and quality of production, technological upgradation in industry and infrastructure, use of less capital intensive and more labour intensive techniques and shifts in investment priorities towards items of mass consumption and measures to improve the quality of life.

Key Targets of the Seventh Plan

The National Development Council approved the following key targets for the Seventh Plan period.

Food grain production	: 188-191 million tonnes.
Steel production	: 13 million tonnes
Cement production	: 48-50 million tonnes
Electricity generation	: 270 billion Kwh.
Originating railway freight.	: 375 million tonnes
Crude production	: 35 million tonnes from existing fields, and upto 5 million tonnes from new fields
Population growth rate	: reduction by 1.83 per cent.
Estimated population (end VII Plan)	: 83 million
Poverty ratio (end VII Plan)	: 23 per cent (fall of 14 per cent)
Additional irrigation	: 15 million hectares
Gross savings rate	: 26 per cent
Overall growth rate	: 5 per cent +
Agricultural growth rate	: 4 per cent
Foodgrains growth rate	: 5 per cent
Industrial growth rate	: 8 per cent
Improvement in capacity utilisation	: 20 per cent
Improvement in public savings	: 15-18 per cent (as proportion to GNP)
Total Plan outlay	: 320,000 crores
Public Sector outlay	: 180,000 crores
Incremental Capital output ratio	: 4.99 per cent

POPULATION AND EMPLOYMENT

At a time when global population has crossed the four-billion mark and has left it far behind, India for its part has crossed the mark of 700 million. This means one out of every six persons inhabiting Planet Earth is a resident of India. So, in so far as the planners have before them the stupendous task of over seventy crores population to be fed, clothed, sheltered and reasonably educated and a considerable proportion of them gainfully employed, the demographic picture so emerging, is far from encouraging. The increase during the decade is 24.75 per cent. The rate of growth is only fractionally lower than that of the previous decade.

The results of the 1981 census are revealing: The Indian Population has grown at an annual exponential rate of 0.83 per cent between 1901 and 1951 and at a much more rapid pace of 2.13 per cent in the three decades 1951-81. Should this rate continue the Indian population by 2000 A.D. would be one and a half times its present size, at 1,025 million.

Key Census Statistics		1961	1971	1981
Population	millions	439	547	684
Density	no./sq. km.	138	182	221
Birth rate	per thousand	42	39	36
Death rate	per thousand	23	14	14.8
Expectation of life	years	42.2	52.6	54
Literacy rate	%	34.4	39.5	46.7*
—Male		13.0	18.7	24.9*
—Female				

* Excluding Assam, J & K.

The states in India may be classified into four groups according to the probable stage of demographic transition indicated by their trend growth rate. Group *A* states are in the earliest stage of transition, with stable fertility and declining mortality and therefore increasing growth rates. These states are Jammu and Kashmir, Rajasthan, Uttar Pradesh and Bihar. Group *B* states are those in the next stage of transition with declines in both fertility and mortality—but the former not significant enough, so that the growth rate is still increasing. This group consists of Karnataka. Punjab and Andhra Pradesh. The states in Group *C* are further advanced in transition, where decline in fertility has possibly caught up with mortality, resulting in declining growth rate in the last decade though the growth rate still remains above the 2 per cent level. These include Haryana Gujarat, Madhya Pradesh, Maharashtra and West Bengal. Group D states of Orissa, Kerala and Tamil Nadu are foremost in transition with large decline in mortality and a compensating decline in fertility so as to bring down the growth rate to a less than—two per cent level. This analysis would serve to pin-point the target population group and to frame a perspective population policy appropriately tailored to each group.

The annual growth rate in population has remained at the old level of 2.2 per cent ; our best efforts so far have not succeeded in lowering this rate. If the present trend continues, it may not even be possible to achieve the already lowered target of the Sixth Five-Year Plan viz. bringing down the birth rate from 35 to 30 per thousand It may be mentioned here that our improved health programmes have helped in good measure to lower the death rate, and in particular, the infant mortality rate.

The seriousness of our economic problem lies mainly in the existence of chronic underemployment and disguised unemployment in the rural sector and unemployment among the educated classes in the urban areas. In an underdeveloped country like India, this is the consequence of shortage of capital and not necessarily ' deficiency of effective demand '. The need is to create jobs and absorb the surplus population in useful employment.

Rural employment, again, is both seasonal and perennial and the nature of unemployment differs from state to state, with varying conditions. About 70 per cent of the working population is engaged in the primary sector of agriculture. In the urban areas there are two types of labour, industrial and the educated middle class. But the rate at which industries have expanded has not been proportionate to the growth in the employable population.

All the Five-Year Plans have had as one of their objective, rapid creation of employment opportunities, but all of them have not satisfactorily achieved the objectives. Instead, only increasing backlogs have been created. In this context it has also been pointed out that a mere increase in production does not automatically lead to the creation of employment. It is equally or even more important that investment and the flow of technology are stepped up.

Demographic Perspective

The demographic profiile presented here is based on the population projections made by the expert committee under the chairmanship of the Registrar General of India.

According to these projections, population is expected to grow to 786 million in 1990 and 864 million in 1996. The growth rate of population is expected to decelerate in successive quinquennia consequent to the declining birth rate. The annual average rate of growth in population has been projected at 1.66 per cent during 1986-91 and 1.56 per cent during 1991-96.

A feature of the population with high growth rates in the initial periods is the relatively higher proportion of younger people (below 15 years) in these periods. However, due to the expected decline in fertility and mortality, the age structure of the population is expected to have an increasing proportion of people above 15 years.

TABLE : Age Structure of Indian Population

Age Group	1980	1985	1990*	1996*
	(Per cent of Total Population)			
0— 4 ..	14.08	12.91	11.96	11.18
5—14 ..	25.59	24.33	22.78	21.32
15—59 ..	54.85	56.92	58.94	60.59
60+ ..	5.48	5.84	6.32	6.91
Total ..	100.00	100.00	100.00	100.00

* Projections.

		General Fertility Rate		Average Life Expectation (Yrs.)				
Period	End-period Population (Millions)	Decline compared to previous 5 years	Absolute Level	Male	Female	Birth rate	Death rate	Growth rate
1971-76 ..	609	9	175	50.1	48.8	36.6	15.2	21.4
1976-81 ..	672	12	154	52.6	51.6	32.9	13.2	19.7
1981-86 ..	735	14	133	55.1	54.3	29.5	11.6	17.9
1986-91 ..	799	12	117	57.6	57.1	27.0	10.4	16.6
1991-96 ..	864	9	106	60.1	59.8	25.0	9.4	15.6

The progressive decline in the proportion of 0-14 age group from 39.67 per cent of the total population in 1980 to 32.50 per cent in 1996 is expected to bring down the dependency ratio (i.e. the ratio of numbers in the age group 0—14 to the rest of the population) from 0.66 to 0.48.

The rising trend in urbanisation witnessed in the last two decades is expected to continue. The urban population which was estimated at 144 million in 1980 is expected to increase to 189 million in 1990 and 220.73 million in 1996.

TABLE : Urban Population—Projections

Year	Urban Population (1)	Total Population (2)	(1) as % of (2)
1980 ..	143.81	659.39	21.81
1985 ..	165.65	722.42	22.93
1990 ..	189.36	786.05	24.09
1996 ..	220.73	869.00	25.40

Labour Force

The projections of labour force (using the concept of usual status determined with reference to the preceding 365 days, whether or not currently in labour force) by age, sex and place of residence upto 1995 are given below, based on the results of the 32nd round of the National Sample Survey on Employment. It was estimated that about 251 million persons in the age group above 15 years were in the labour force out of the total population of 659 million in 1980. The figure is expected to raise to 359 million in 1995. The estimated addition of 108 million persons to the labour force over the period 1980-85 combined with the backlog of unemployment/under employment would prove to be the most important challenge to our development strategy in the years ahead.

Population Policy

Our planners set a long-term goal of reducing the net reproduction rate to unity by 1995 for the country as a whole. This is possible only by reducing birth rate to 21 per thousand, death rate to 9 and increasing the proportion of people protected by family planning to about 60 per cent. In the light of the demographic profile presented earlier, it is expected that the proportion of women in the reproductive age group 15-44 to the total female population would show a continuous rise.

The implication of the above demographic profile is that the birth rate is likely to show a rising trend even if the age-specific fertility rates remain static. The Planning Commission, therefore, underscored the necessity for an effective strategy for fertility control in order to realise the long term goal of population stabilisation. The family planning programme has to be reactivised by education and persuasion of people, avoiding any form of coercion. The small family norm has to be built into the social and cultural ethos of the people.

A multi-pronged, but integrated approach comprising education and employment, particularly of women, eradication of poverty, maternal and child-care services including immunisation, prophylaxis and nutrition, building up of health care facilities etc., is needed. The health-infrastructure in the country has to be extended and all existing channels of communication including governmental extension machinery, voluntary organisations, youth organisations, womens' organisations and village opinion leaders will have to be fully mobilised for promoting the widespread acceptance of family welfare measures.

A national consensus is essential on the importance of family planning programme, in the present context of the growing pressures on the basic life support systems and the country's economic well-being. Social pressures against early marriages and large family sizes should be built up. It should be remembered that all the plan projections of reduction of poverty and unemployment will go wrong if success is not achieved in containing population growth.

Despite the steep hike in plan outlays for family welfare programmes from Rs. 25 lakhs in the I Plan to Rs. 1448 crores in the VI Plan, India's population has nearly doubled in the course of the six five year plans to well over 700 million. Despite great government efforts, the annual growth rate still lingers around 2 per cent. The decadal growth rate has increased from 13.3 per cent in 1941-51 to around 25 per cent in 1971-81.

While the All India figure for birth rate shows a decline, the fall in death rate has been sharper and the gap between the two increased from 18.9 per 1000 in 1951-61 to 22.2 in 1971-81. The country, by all account has been passing through the phase of 'population explosion'. As per projections, our population is expected to stabilise only by the turn of the century at the staggering level of 1170 crores. However much before our population reaches that level, the already burgeoning Indian metropolises will become thoroughly unmanageable.

In the Indian context, for planning an effective population policy, it is important to reduce the high fertility rates. Three factors play a profound role in this : (i) better health through reduction of child and infant mortality, evolving ultimately to the smaller family norm ; (ii) a strong correlation between women's education and fertility which prompts measures to strengthen the former; (iii) a strong association between a high rate of female work participation and low growth rate of population. What is required in the face of these, is an integrated approach to population control, with family welfare, education, health and rural development programmes complementing each other.

PUBLIC SECTOR

The performance of the public sector enterprises during 1984-85 has improved considerably, with 191 out of 205 units earning a profit of Rs. 956.12 crores. This surpasses the previous best figure of Rs. 613.51 crores by 195 enterprises in 1982-83. Percentage wise, the gross profit to capital employed has improved to 12.30 per cent in 1984-85 compared to 11.94 per cent, the previous year. However, the ratio of gross margin to capital employed continued to remain at 19.32 per cent. Except for medium and light engineering sectors, all other sectors showed an upswing in their performance during the last financial year. Even the loss making units like steel, metals and minerals and heavy engineering have geared up their performance considerably. The comparative performance of the four sectors which showed significantly improved performance are listed as follows :

	Net Profit/Loss (Rs. crores) (1983-84)	(1984-85)
Petroleum	.. (+) 1,012.75	(+) 1,137.38
Chemicals & Fertilisers	.. (−) 65.97	(+) 7.97
Coal	.. (−) 243.10	(+) 7.47
Steel	.. (−) 248.35	(−) 38.40
Total	.. (+) 455.33	(+) 1,114.42

The petroleum companies continued to account for a major portion of the profits. Another encouraging feature during the last financial year was the decrease in losses of other sectors. The total cash loss had decreased to Rs. 892.05 crores in 1984-85 from Rs. 978.87 crores in 1983-84. The performance of 84 loss-making enterprises improved with net loss declining to Rs. 1,315.15 crores from Rs. 1,534.37 crores in 1983-84. However, the sick units taken over showed a further decline in 1984-85. The decline in performance of Zinc, Lead, Gold and Textiles was attributable largely to power shortages, unsatisfactory industrial relations, indigenous equipment problems, poor quality of concentrates and declining trend in gold reserves.

The public sector undertakings under the department of heavy industry recorded a growth of 19 per cent during 1984-85 over the previous year. The 19 undertakings increased their production from Rs. 2,258 crores in 1983-84 to Rs. 2,680 crores in 1984-85. The two undertakings Burn Standard Co. Ltd., and Maruti Udyog Ltd., exceeded their respective targets for 1984-85. As against a target of 20,544 vehicles, Maruti Udyog Ltd., produced 22,369 vehicles. Bharat Heavy Electricals Ltd., and Hindustan Machine Tools achieved 100 per cent of their target. The units which achieved over 90 per cent of their target include Tungabhadra Steel Products (94 per cent), Triveni Structural Ltd., Richardson and Cruddas (92 per cent) and Jessop and Co. (90 per cent).

While successive governments have added more and more enterprises and industries to the public sector, there has also been criticism of the performance of this sector. In the assessment of the performance, the question has been whether profit should be the criterion. But as public enterprises are influenced by several other considerations, profit alone is not an appropriate yardstick especially in such cases as Posts and Telegraphs, Railways and Electricity generation. The bulk of investments being in heavy and basic enterprises, the gestation period is also much longer. There are of course many other considerations which should go into a proper assessment of their performance.

The Planning Commission has approved an outlay of Rs. 1,80,000 crores for the public sector with the shares of Centre, States and Union Territories being Rs. 95,734 crores, Rs. 80,498 crores and Rs. 3,768 crores respectively. The total outlay represents an increase of 85 per cent over the Sixth Plan outlay of Rs. 97,500 crores. However, the resources of the public sector has come under severe strain in the current year and is likely to remain difficult in the Seventh Plan period. Even assuming an additional resource mobilisation of Rs. 36,000 crores by the Centre and the States during the five year period of the plan, a gap of Rs. 33,000 crores remains after pre-supposing a generous measure of foreign aid and deficit financing to the extent of Rs. 10,000 crores.

The difficulties stem from certain structural features of plan financing, which have evolved over a number of years and which cannot be corrected in a short time frame. Tax revenues are not rising at a rate which is sufficient even to meet increases in the non-plan expenditure on account of items such as defence,interest payments and subsidies. These three items taken together account for 75 per cent of the total non-plan revenue expenditure of the Centre. For the past few years the resources position of the public sector has been buttressed by an expanded programme of public borrowing, but there are severe limitations to this strategy in the years ahead. Availability of external borrowings on concessional items is strictly limited. Domestically the scope for borrowing from banks is constrained by the need to limit monetary expansion to levels consistent with non-inflationary growth.

In view of the resources constraint, the Planning Commission has pruned drastically the Seventh Plan Outlays for two critical sectors viz., Power and Oil. While the outlay for power was reduced from Rs. 67,500 crores to Rs. 34,000 crores, Oil sector outlay has been pruned from Rs. 34,000 crores to Rs. 12,800 crores. Another sector whose outlay has also been reduced is the Telecom sector. Its outlay has been reduced from Rs. 12,800 crores to Rs. 4,800 crores.

Several measures have been initiated to improve the performance of the public sector undertakings. These include besides expeditious implementation of modernisation schemes, regular supply of inputs especially power and coal and better maintenance of plant and equipment which ensures increased efficiency in operation. A high level committee has been appointed to review the working of the public sector enterprises and suggest changes in their organisation and policies.

The Arjun Sengupta panel examined in depth the problems of the public sector units and has made several recommendations with far reaching implications. The report of the committee was submitted in December 1984.

The major suggestions included restructuring of the core sector units, a more scientific pricing format for the administered prices with an inbuilt provision for automatic increase in prices upon each increase in cost of production and phasing out of the price preference scheme.

The experts panel had suggested the creation of holding companies for the core sector and apex companies for the non-core sector. It may be pointed out that the concept is not entirely new and in the two core sectors of steel and coal structural pattern is already on the lines of holding and subsidiary companies.

It was suggested that the core sector should enjoy full autonomy. At present the state units are completely dependent on the ministry department to which they belong. While the panel favours government directors on the boards of the holding companies, the subsidiaries, it feels, should be free from such obligations. The parent company could be either an autonomous body, or operate under the ministry or department concerned. One major suggestion by the panel is that the government should concern itself only with the investment decisions, appointments and setting up of plan targets, giving the units necessary freedom and sense of responsibility.

In the present system of administered prices there is a time-lag in allowing companies to implement each price hike because of procedural delays and in the face of opposition from consuming units. When a proposed price hike is finally approved, it is delayed and insufficient. This issue therefore needs to be probed in detail to find a permanent solution. The panel also felt that the state units should be gradually weaned away from the facility of price preference scheme and should be encouraged to stand on their own.

INDUSTRIAL POLICY OF INDIA

The concept of 'Industrial Policy' is comprehensive and covers all those procedures, principles, policies, rules and regulations which control the industrial undertakings of a country and shape its pattern of industrialisation. It incorporates fiscal and monetary policies, the tariff policy, labour policy and government's attitude not only towards external assistance but the public and private sectors also. Thus, the industrial policy is broadly made up of two components. One is the philosophy of a given society to shape industrial growth. Second is the implementation i.e. rules and principles which give concrete shape to the philosophy of the policy.

The philosophy generally takes the form of objectives which are either explicitly stated or which are implicit in the rules and principles of the policy. The philosophy can be that of non-intervention, as was the case in the past. Non-intervention on the part of the government expresses implicitly the faith of society in market with private property as a desirable end in itself; or the policy may be that of intervention in the form of simple regulation of market and/or in the form of government also undertaking entrepreneurial functions, as in India.

The motivating philosophy behind market regulation and government itself undertaking the task of entrepreneurship is that a mixed economy combines the best of a market society and socialism and avoids the evils of both, or the objective can be of complete socialisation of all productive activity on the ground that socialism is a higher level economy to which all the systems will ultimately move. Thus all the three choices—non-intervention, or intervention in market or elimination of market flow from the political objectives of a society. It is these which provide a frame for the industrial policy of a country.

The second component of industrial policy is to provide the wherewithal for its implementation. In the context of the mixed economy of India, the policy is expected to include such things as principles, procedures, rules and regulations which are intended to control and regulate industrial undertaking, both large-scale and small-scale, policies relating to the division of industries into public, private, joint and co-operative sectors; participation of foreign enterprises, their management etc.

A well designed industrial policy is important for several reasons :

(1) It can help to correct the lop-sided development of industrial structure and thereby bring about desirable balance and diversification in our economic structure.

(2) It can direct the flow of scarce resources in the most desirable areas of investment in accordance with national priorities.

(3) It can prevent duplication or wasteful use of our resources so that the country can ensure conservation and judicious use of our limited resources (both exhaustible and renewable).

(4) It empowers the state to regulate and control the establishment and expansion of the industrial undertakings in the private sector, in accordance with our planned objectives.

(5) It can help to demarcate the areas of economic activity between the different sectors of our economy.

(6) It can prevent, through industrial licensing and other supporting measures of fiscal and monetary policy, the concentration of wealth and economic power in a few hands so that the emergence and evils of monopoly capitalism can be effectively curbed.

(7) It can also lay down policies towards the import of foreign capital and the conditions on which such capital would be permitted to operate in India.

In short, industrial policy provides guidelines, for effective co-ordination and integration of the activities of the various sectors of the economy with a view to achieving a balanced and self-reliant pattern of development that can ensure rapid growth of output and employment.

Pre-Independence Policy

Till India became independent, the government mainly followed the policy of laissez-faire in respect of industrial development. During the inter-war period, the policy of discriminating protection was adopted in early twenties on the recommendation of the First Fiscal Commission. Besides, during the two world-wars, the government made a slight departure from its laissez-faire policy and actively supported the development of certain industries which were calculated to help the war effort. In the pre-independence period rapid industrialisation was out of question as it would have been detrimental to British interests. More rapid growth of industries were impossible in the absence of an all-round process of development planning.

Industrial Policy of 1948

The industrial policy resolution of 1948 contemplated a mixed economy, reserving a sphere for the private sector and another for the public sector. The industries were divided into four broad categories.

(*a*) The manufacture of arms and ammunition, the production and control of atomic energy, and the ownership and management of railway transport were to be the exclusive monopoly of the Central Government.

(*b*) The second category covered coal, iron and steel, aircraft manufacture, shipbuilding, manufacture of telephone, telegraphs and wireless apparatus excluding radio receiving sets and mineral oils. New undertakings in these industries could henceforth be undertaken only by the State. The inherent right of the State to acquire any existing industrial undertaking in this category was emphasised.

(*c*) The third category comprised of certain basic industries such as salt, automobiles, tractors, prime movers, electric engineering, heavy machinery, machine tools, heavy chemicals, fertilisers, electro-chemical industries, non-ferrous metals, rubber manufactures, power and industrial alcohol, cotton and woollen textiles, cement, sugar, paper and newsprint, air and sea transport, minerals and industries relating to defence. It was emphasised that the Central Government could take over any industry vital for national drive.

(*d*) The fourth category comprising the ' remainder of the industrial field ', was left open to private enterprise, individual, as well as co-operatives.

Besides this, the resolution indicated lines of policy in many other directions :

(i) The resolution ascribed a very important role to cottage and small-scale industries in the national economy offering as they do, scope for individual, village or co-operative enterprises and means for decentralising industries.

(ii) It had enunciated a policy of fair labour conditions as an essential basis for harmonious relations between management and labour. The government proposed to evolve a suitable machinery for advising on fair wages and fair remuneration for capital and conditions of labour. Labour was also to be associated with the management of the concern.

(iii) The policy had also emphasised the need for securing the participation of foreign capital and enterprise particularly as regards industrial technique and knowledge so as to foster the pace of industrialisation of the Indian Economy. But, the participation of foreign capital should be carefully regulated in national interests. The resolution however, made it amply clear, ' that as a rule the major interest in ownership, and effective control should always be in Indian hands '. In all cases, however, the training of suitable Indian personnel for the purpose of eventually replacing foreign experts will be insisted upon. Thus while recognising the need for foreign capital in the industrialisation of the economy, the Government nsisted upon the progressive Indianisation of foreign concerns.

The aim of the Industrial Policy Resolution of 1948 was to clear the foggy atmosphere and help the process of investment (both domestic and foreign) and also to lessen industrial conflict. The main thrust of the 1948 Industrial Policy was to lay the foundation of a mixed economy in which both private and public enterprises would match hand in hand to accelerate the pace of industrial development.

Industrial Policy Resolution, 1956

The adoption of a socialistic pattern of society as the national objective and the programme of rapid industrialisation, contemplated in the Second Five-Year Plan, necessitated a clear and positive formulation of industrial policy in relation to planned economic development. The Second Five-Year Plan, bent on developing heavy industries, envisaged Rs. 890 crores for industrial development and mining. In the context of this bold industrial programme there was an urgent necessity for reformulation and re-orientation of the 1948 Industrial Policy Resolution. Therefore, almost simultaneously with the launching of the Second Five-Year Plan, Government of India's Second Industrial Policy was announced.

Important provisions of the 1956 Resolution were :

(i) *New Classification of Industries.* The resolution laid down three categories which bear a close resemblance to the earlier classification, but were sharply defined and were broader in coverage as to the role of the state. These categories were : (*a*) Schedule A : those which were to be an exclusive responsibility of the state ; (*b*) Schedule B : those which were to be progressively state owned and in which the state would generally set up new enterprises, but in which private enterprise would be expected only to supplement the effort of the state ; and (*c*) Schedule C : all the remaining industries and their future development would in general, be left to the initiative and enterprise of the private sector.

(ii) *Fair and Non-discriminatory Treatment for the Private Sector.* In order that the private sector may feel confident and function efficiently, the state was to facilitate and encourage the development of industries in the private sector by ensuring the development of transport, power and other services and by appropriate fiscal and other measures. The State would continue to foster institutions to provide financial aid to these industries, and special assistance would be given to enterprises organised on co-operative lines for industrial and agricultural purposes. When there exist in the same industry both private and publicly owned units, it would continue to be the policy of the state to give full and non-discriminatory treatment to both of them.

(iii) *Encouragement to Village and Small-scale Enterprises.* The state has constantly been endeavouring to support cottage and village and small-scale enterprises by restricting the volume of production in the large-scale sector, by differential taxation, or by direct subsidies. The state would concentrate on measures designed to improve the competitive strength of the small-scale producer by constantly improving and modernising the technique of production.

(iv) *Removing Regional Disparities.* The resolution stressed the necessity of reducing the regional disparities in levels of development in order that industrialisation may benefit the country as a whole. The resolution fully supported the idea that only by securing a balanced and co-ordinated development of the industrial and agricultural economy in each region, can the entire country attain higher standards of living.

(v) *The Need for the Provision of Amenities for Labour.* The resolution also recognised that in a socialist democracy, labour is a partner in the common task of development and should participate in it with enthusiasm and for this, the maintenance of industrial peace is one of the essential conditions. It stressed that the living and working conditions of workers should be improved and their standard of efficiency raised. There should be joint consultation ; and workers and technicians should, whenever possible, be associated progressively in management. The resolution expected the enterprises in the public sector to set an example in this respect.

(vi) *Attitude towards Foreign Capital.* The Government's attitude to foreign capital was the same as was enunciated in Industrial Policy resolution of 1948.

The redeeming feature of the 1956 policy is that it brings about an excellent synchronisation between Government's industrial policy and the industrial programmes included in the plan. The objective of a socialistic pattern and mixed economy was given expression in terms of industrial development through this resolution. It had not only stated clearly the inherent right of the state to acquire any industrial undertaking, but had also expressed doubts in the ability of the private sector, to bring about fast economic development by itself. Therefore with the announcement of the 1956 policy, the industrialists in the private sector raised a strong protest on the grounds that strengthening of the restrictive powers of Government and indirect threats of nationalisation would curb incentives and retard capital formation in the private sector. This fear was based on a misreading of the resolution. The policy did not aim at nationalising the existing units but on the contrary devised adequate steps for their growth and development.

Industrial Policy of 1973

Though the Government was going ahead with programmes of progressive nationalisation and expansion of the public sector, it was unable to develop an efficient public sector. This created uncertainity in the investment climate and thus discouraged the private sector investment, resulting in a slow rate of growth of industrial production. The government therefore decided to modify its policy. The industrial policy statement of February 1973 indicated the direction of change. The following are the main features of the new policy announced on 2nd February, 1973.

(i) The Industrial Policy Resolution of 1956 will continue to provide the base for the policy of 1973.

(ii) In the context of the approach to the Fifth Five-Year Plan, the state industrial sector will cover a wider field to promote growth with social justice, self-reliance and satisfaction of basic minimum needs.

(iii) The industrial licensing policy of 1970 will be amended from time to time in order to have a greater clarity in the investment climate that will facilitate the priorities and production objectives in the Fifth Plan.

(iv) The industrial licensing policy ordinarily excludes the larger industrial houses from participating in sectors other than the core and heavy investment sectors. The larger industrial houses refer to industrial concerns having assets, including the assets of inter-connected undertakings exceeding Rs. 35 crores. The Industrial Policy of 1973 considers that the definition of larger industrial houses for the purpose of licensing restrictions should conform in all aspects to the definition adopted in the Monopolies and Restrictive Trade Practices Act 1969. (MRTP Act 1969). The Act defines a larger unit to be one having assets including assets of inter-connected undertakings, exceeding Rs. 100 crores.

(v) The core industries, industries having direct linkages with such core industries, and industries with a long term export potential will fall under basic, critical and strategic industries important for the growth of the economy.

(vi) The seventeen strategic and basic industries, comprising the first category of industries mentioned in the 1956 Industrial Policy will continue to be reserved for the public sector.

(vii) Large houses are eligible to participate in basic, critical and strategic industries, along with other applicants, provided that the item of manufacture is not one which is reserved for production in the public sector. This will be easier if production is predominantly for export. Foreign concerns and subsidiary branches of foreign companies will also be eligible to participate in such industries, particularly when the production is for export purpose.

(viii) The existing policy of reservation for the small-scale sector (involving investment in machinery and equipment upto Rs. 7.5 lakhs, and in the case of ancillary industries upto Rs. 10 lakhs) is to be continued. The area of such reservation is to be extended consistent with potentialities and performance of the small-scale sector.

(ix) The joint sector will not be permitted to be used for the entry of larger houses, dominant undertakings and foreign companies in areas precluded to them. In a joint sector unit the government will play an effective role in guiding policies, management and operations, the actual pattern and mode being decided as appropriate in each case. The joint sector will be used mainly as a promotional instrument and will benefit the small investor.

The 1973 policy resolution has kept the concept of joint sector as hazy as ever. Though it is intended to largely associate the middle and small firms in the joint sector, the participation of large industrial houses in the joint sector has not been entirely ruled out. The Industrial Policy of 1973 should be viewed as a supplement to the Industrial Licensing Policy of 1970. It has paid greater attention in defining the role of the private sector with particular reference to the larger industrial houses but, failed to identify the joint sector with a view to making use of private expertise and resources in line with governments' socio-economic objectives.

Industrial Policy of 1977

The government policy in the sphere of industry since the middle of 1956 has been governed by the Industrial Policy Resolution of 1956. But the results in the industrial field have fallen far short of the desired objectives. The growth of industrial output during the period 1967-1977, except for the year 1976 has been no more than 3 to 4 per cent per annum on an average. The incidence of industrial sickness has been widespread and some of the major industries have been worst affected. Unemployment has increased, rural urban disparities have widened and the rate of real investment has stagnated. The Industrial Policy, announced in December 1977, was, therefore, primarily directed towards removing these distortions of the past so that the goal of faster economic development could be achieved within a time bound programme.

The broad objectives of the 1977 industrial policy were as follows :

(1) Doubling the rate of growth of national income from 3.5% to 7% per annum.

(2) A rapid increase in the rate of growth of industrial production.

(3) Creating much larger employment opportunities and

(4) Reducing wide regional disparities and imbalances.

The salient features of 1977 Industrial Policy were :

(*a*) Development of Small Scale Sector—The main thrust of the new Industrial policy will be an effective promotion of cottage and small industries widely dispersed in rural areas and small towns. The policy statement categorically mentioned : 'The emphasis on industrial policy has been mainly on large industries, neglecting cottage industries completely, relegating small industries to a minor role......' 'It is the policy of the Government that whatever can be produced by small and cottage industries must only be so produced.' The small sector was further classified into the following categories : (i) cottage and household industries which provide self-employment on a wide scale, (ii) tiny-sector which comprises of units whose investment in machinery and equipment is up to Rs. 1 lakh, and is situated in towns and villages with a population of less than 50,000. The new industrial policy intended to simultaneously develop all the categories mentioned above.

(*b*) Protecting the interest of cottage and household industries through the introduction of special legislation, with a view to ensuring that these activities which provide self-employment in large numbers, get due recognition in our industrial development.

(*c*) Promotion of Khadi and Village Industries by adopting modern techniques. For this purpose the government proposed to draw up special programmes to progressively increase the production of footwear and soaps in the small sector. It had also proposed to revamp the Commission with a view to enlarge its area of operation. In the programme of development of village industries, the Government intended to give special place to Khadi and especially 'Nai Kadi' as it was hoped that the productivity and earnings of khadi spinners and weavers would improve.

(*d*) Development of appropriate technology—It would be an integral part of the Governments' policy to ensure that the development and application of technology appropriate to the country's socio-economic condition receives adequate attention. Special arrangements were to be made to ensure an effective and co-ordinated approach for the development and widespread application of suitable, small and simple machines, and devices for improving the productivity and earning capacity of workers in small and village industries.

(*e*) Role of Large-scale Industries will be essentially related to the programme for meeting the basic minimum needs of the population through wider dispersal of small-scale and village industries and strengthening of the agricultural sector. The Government will not favour large-scale industry merely for demonstration of sophisticated skills or as movements of irrelevant foreign technology. The Industrial policy, therefore prescribed the following areas for large-scale sector (i) basic industries which are essential for providing infrastructure as well as for development of small-scale and village industries, such as steel, non-ferrous metals, cement, oil refineries ; (ii) capital goods industries for meeting the machinery requirements of basic industries as well as small-scale industries ; (iii) high technology industries which require large-scale production and which are related to agricultural and small-scale industrial development such as fertilisers, pesticides, petrochemicals etc. and (iv) other industries which are outside the list of reserved items for the small-scale sector, and which are considered essential for the development of the economy such as machine tools, organic and inorganic chemicals.

(*f*) Expanding role for the public sector—The new Industrial policy specifies that the public sector will not only be the producer of important and strategic goods of basic nature, but will also be used effectively as a stabilising force for maintaining essential supplies for the consumer. It will be charged with the responsibility of encouraging the development of a wide range of ancillary industries and contribute to the growth of decentralised production by making available its expertise in technology and management to small-scale and cottage industry sectors. The Government would also endeavour to operate public sector enterprises on profitable and efficient lines in order to ensure that investment in these industries pay an adequate return to society.

(*g*) Foreign Investment—The provisions of the Foreign Exchange Regulation Act will be strictly enforced so far as the existing foreign companies are concerned. After dilution of equity, companies with direct non-resident investment not exceeding 40 per cent will be treated generally on par with Indian companies, and their future expansion will be guided by the same principles as those applicable to Indian companies.

(*h*) Take-over of sick units—The Industrial policy suggested that in future, the take over of the management of sick units would be resorted to on a selective basis and this would be done only after a careful examination of the steps required to revive the units. The Government in co-operation with the Reserve Bank have instituted arrangements for monitoring incipient sickness in industrial units so that corrective action can be initiated as soon as there is evidence of mismanagement or financial or technical weakness.

(*i*) Restricting family control of industry—The Industrial policy statement mentioned ' Family control of business, particularly in the field of large-scale industry, is an anchronism, and it will be the Governments' policy to insist on professionalisation in management '. The Government decided to examine the possibilities of encouraging workers' participation in the equity of industrial units without in any way, adversely affecting their interests.

The 1977 Industrial policy was framed with the idea that it would ' help in the creation of a just and equitable society in which the benefits of industrial development will be shared by all the people '. The objective was undoubtedly laudable but was difficult to fulfil. The policy was somewhat harsh to the large units in the private sector when it stipulated that they would have to rely on internally generated resources for financing new projects or expanding existing projects. The financing of large-scale sector does not have to be at the cost of other sectors but at the same time it would certainly hurt the economy if the large-scale sector is not able to function effectively due to shortage of funds. Most of the large industries are not doing well. To enable these units to increase profitability, the Government should not close the door of outside financial resources to the large units. A welcoming feature of the policy is the expanding role assigned to the public sector and the Government's determination to run public sector enterprises on profitable basis in order to ensure that investment in these industries pay an adequate return to society.

New Industrial Policy of 1980

The Indira Gandhi Government which replaced the Janata/Lok Dal, Congress (U) Alliance Governments at the Centre in January 1980 understandably came up with its own alternative to the Janata party's Industrial policy statement of December 1977 more particularly in view of the industrial stagnation that had marked the immediately preceding year. While endorsing the philosophy of the 1956 Industrial policy, the Government announced on July 23, 1980, the new industrial policy which included major relaxations and concessions benefiting the small, medium as well as large-scale sector with the triple object of modernisation, expansion, and development in backward areas.

The thrust of the concessions is in doubling the investment limit of tiny, small and ancillary sectors, regularisation of the excess capacity and permitting automatic expansion facility for large units in the priority sector and setting up of several nucleus industrial centres in industrially backward areas. Broadly speaking, this new policy of integrated industrial development seeks to promote the concept of economic federalism, offers a new deal to the private sector, promises to improve the efficiency of the public sector, seeks to reverse the trend of the past three years towards creating artificial divisions between small and large-scale industry, and re-affirms its faith in Monopolies and Restrictive Trade Practices Act (MRTP Act) and the Foreign Exchange Regulation Act (FERA).

Highlights of the New Policy

The following are the main features of the new policy :—

(i) *Socio-Economic Objectives :* The new policy has spelt out the main socio-economic objectives as under ;

(*a*) Optimum utilisation of the installed capacity.

(*b*) Maximising production and achieving higher productivity.

(*c*) Higher employment generation.

(*d*) Correction of regional imbalances through a preferential development of industrially backward areas.

(*e*) Strengthening of the agricultural base by according a preferential treatment to agro-based industries and promoting optimum inter-sectoral relationship.

(*f*) Faster promotion of export-oriented and import substitution industries.

(*g*) Promoting economic federalism with an equitable spread of investment and the dispersal of returns amongst widely spread small but, growing units in rural as well as urban areas.

(ii) *Revival of the Economic Infrastructure :* The main emphasis of the new policy is on the revival of the economy which has recently been inhibited by infrastructural gaps and inadequacies in performance. This put the economy into a vicious circle of shortages of major industrial inputs like energy, transport and coal. To normalise the situation, Government, through this policy, seeks to break this vicious circle and to put the economy again on its feet.

(iii) *Revamping of the Public Sector :* The new policy re-affirms its faith in the primacy of the public sector and seeks to restore the people's faith in it, as ' People's sector ' and not as ' no body's sector '. With this end in view, it proposes to evolve effective operational systems of management in the public sector undertakings. More specifically, such industrial undertakings will be closely examined on a unit-by-unit basis and corrective action will be taken in terms of a time bound programme. Priority will be accorded to convert losing concerns into viable ones through a broad restructuring of the system and by providing dynamic and competent management. Since one of the main reasons for the unsatisfactory performance of public undertakings has been identified as the absence of proper management cadre, the new policy envisages the development of management cadres in functional fields such as operations, finance, marketing and information system.

(iv) *Role of the Private Sector :* Rather than running down the private sector, the Government would pursue the goal of a vibrant, self-reliant and modern economy in which all sectors and all segments of the society have a positive role to play. Government recognises that it would be, in general, desirable to allow private sector undertakings to develop in consonance with targets and objectives of national plans and policies but, shall not permit the growth of monopolistic tendencies or concentration of economic power and wealth in a few hands.

(v) *Economic Federalism* : According to the policy statement, it will be the Governments' endeavour to reverse the trend towards creating artificial divisions between small and large-scale industry under the misconception that these interests are essentially conflicting. While making all efforts towards integrated industrial development, the policy proposes to promote the concept of economic federalism with the setting up of a few nucleus plants in each district identified as industrially backward to generate as many ancillaries and small and cottage units as possible.

(vi) *Nucleus Plants :* The policy has introduced a new concept that of nucleus plants. A nucleus plant is one which would concentrate on assembling the products of the ancillary units falling within its orbit, on producing the inputs needed by a large number of small units and making adequate marketing arrangements. The nucleus plant will also ensure a widely spread pattern of investment and employment and will distribute the benefits of industrialisation to the maximum possible extent. The nucleus plants would work for upgrading the technology of small units. A carefully worked out time bound programme for greater ancillarisation in certain industries will contribute considerably towards dispersal of industry and growth of entrepreneurship.

(vii) (*a*) *Redefining of Small-Scale units :* In order to boost the development of small-scale industries and to ensure their rapid growth, Government have decided ;

(1) To increase the limit of investment in the case of tiny units from Rs. 1 lakh to Rs. 2 lakhs.

(2) To increase the limit of investment in case of small scale units from Rs. 10 lakhs to Rs. 20 lakhs and

(3) To increase the limit of investment in the case of ancillaries from Rs. 15 lakhs to Rs. 25 lakhs.

The policy contemplates that, the upward revision of limits of investment for the small units would eliminate the tendency to circumvent the present limit by underestimating the value of machinery and equipment, falsification of accounts or resort to ' benami ' units. The enhancement of the limit in terms of investment in plants and machinery will also help genuine small-scale units particularly those being set up by young and technically qualified entrepreneurs to come up. This measure will also facilitate long overdue modernisation of the existing small-scale units.

(*b*) *Financial support to small units :* One of the major constraints to the growth of the decentralised sector has been the difficulties of finance experienced particularly by industrial entrepreneurs in small, cottage and rural sectors. Although, there is adequate network of institutional finance, yet there is need for co-ordinating the flow of capital both short-term and long-term. Government would evolve a system of co-ordination to ensure the flow of credit to the growing units in the decentralised sector at the right time and on appropriate terms. The new policy envisages the strengthening of the existing arrangements and making such changes as may be necessary to facilitate the availability of credit to the growing units in the small-scale sector.

(*c*) *Buffer stocks of critical inputs for small-scale industries :* In order to assist the growth of small-scale industries it is proposed to introduce a scheme for building up buffer stocks of essential materials which are often difficult to obtain.

(*d*) *Marketing support and reservation of items for small-scale industries :* Policies regarding marketing support to the decentralised sectors and reservation of items for small-scale industries shall continue to be in force in the interest of growth of the small-scale industries.

(*e*) *Greater attention to village industries :* Government would promote such a form of industrialisation in the country as can generate economic viability in the villages. Promotion of suitable industries in rural areas will be accelerated to generate higher employment and higher per capita income for the villagers in the country without disturbing the ecological balance. Handlooms, handicrafts, khadi and other village industries will receive greater attention to achieve a faster rate of growth in villages.

(viii) *Correcting regional imbalances*: Particular emphasis will also be laid on correcting the regional disparities in industrial growth in the country which, instead of being narrowed down have actually been accentuated. For the achievement of this goal, Government has decided to encourage dispersal of industry and setting up of units in industrially backward areas. Special concessions and facilities will be offered for this purpose and these incentives will be growth and performance-oriented.

(ix) *Generation of employment and higher production :* Industrial development has to be viewed in the broader context of generating higher production and employment. Overcoming the problems of poverty and backwardness, need a multi-pronged approach. An integral part of this approach would be to create new focal points of industrial growth which have the maximum effect on the quality of life. This will have to be based essentially on the utilisation of local materials and locally available manpower. The ripple effect of substantial investments in backward districts in the past has, in many cases not been adequate, mainly because such investments did not have effective linkages with local resources. The new policy therefore proposes to encourage investment by public and private sectors which will meet these criteria and would also promote a network of spreadout ancillaries.

(x) *Liberalisation of existing/licensed capacities :* A very important feature of the new policy relates to the recognition as well as liberalisation of the productive capacity of industrial units in the interest of raising industrial production in the country. There are several industries which are important from the point of view of national economy or are engaged in the production of articles of mass consumption. Their productive capacity may have greatly improved as a result of increased labour productivity or technological improvements, but they cannot avail of this increased productive capacity because of the constraint imposed by the original industrial licence. The new policy proposes to recognise and endorse such enhanced productive potential. Where the industrialists had exceeded their original licensed capacities, these would also be regularised on a selective basis.

(xi) *Provision for automatic growth :* A very notable feature of the new policy relates to the provision for automatic growth of the existing capacities. Realising the constraint on resources on the one hand and the high prices of new capital goods on the other, the Government had in 1975, allowed to 15 selected industries the facility for automatic expansion (limited to 5 per cent per annum or 25 per cent in 5 year period). The 15 industries fell either in the category of core industries or in those which had direct linkages with them or which had long-term potential. This expansion was to be in addition to the normal permissible expansion in production by 25 per cent of the approved capacity. Now in terms of the new policy, this facility will also be extended to all other industries included in Appendix 1 of the Industries (Development and Regulation) Act 1951.

(xii) *Streamlining licensing procedures :* There has already been considerable simplification and streamlining of licensing procedures. Nevertheless, there is scope for further improvement in reducing the period of time taken for disposal of applications for the creation of new capacities or proposals for the production of new items. The new policy proposes to speed up the process of examination and decision-making and also to examine the possibilities of further rationalisation and simplification of the system of industrial licensing.

(xiii) *Encouraging export-oriented units :* Realising the key role of exports in development, the new policy provides for sympathetic consideration of requests for setting up 100 per cent export-oriented units, or for the expansion of existing units exclusively for purposes of export and for allowing higher production for exploiting fully, the emerging export opportunities.

(xiv) *Permitting larger capacities to reap economies of scale :* In a number of cases Indian industry has not been able to compete in markets abroad because the scale of output which is related to the level of domestic demand is too small to give them the advantages of modern technology and economies of scale. In cases where a larger production base would increase competitiveness of Indian industry abroad, government will consider favourably the induction of advanced technology, and will permit creation of capacity, large enough to make it competitive in world markets, provided substantial exports are likely.

(xv) *Encouragement to research and development (R & D) :* Research and Development is essential to constantly up-date technologies with a view to optimal utilisation of scarce resources, better service to the consumer and achieving greater exports. Greater emphasis will be put on bringing the benefits of the latest R & D to the medium and small units.

(xvi) *Transfer of technology :* Government will take active measures to facilitate the transfer of technology from efficiently operating units to new units. Companies which have well established R & D organisations and have demonstrated their ability to absorb, adopt and disseminate modern technology will be permitted to import such technology as will increase their efficiency and cost-effectiveness.

(xvii) *Modernisation packages and energy industry dovetailing* : 'Modernisation Packages' will be evolved to suit the requirements of each industry, and will include all aspects, i.e. appropriate location and optimum use of energy and the adoption of the right kind of technology in order to minimise costs and improve efficiency in the use of scarce materials. It will be Government's endeavour to ensure that the process of modernisation percolates down to small units and villages, until recently little effort has been made in dovetailing the industry and energy policies. Accordingly, such industrial processes and technologies as would aim at optimal utilisation of energy or the exploitation of alternative sources of energy, would be given special assistance, including finance on concessional terms.

(xviii) *Monitoring System and Data Bank* : The new policy also proposes that, in future the agencies connected with the issuance of letters of intent/industrial licences will not merely concern themselves with letters of intent/industrial licences, but would also evolve a comprehensive system of monitoring the implementation of the schemes through the establishment of the Data Bank.

(xix) *Evaluation of Incentives* : It is Government's considered view that all incentives given to industry must be performance-oriented. This desire of the Government was emphasised in the new policy. It was therefore proposed that a regular periodic assessment will be made of the impact of these incentives to see the extent to which they have fulfilled their initial purpose.

(xx) *Devising an early-warning system to bring to light the industrial sickness* : Government is concerned at the growing problem of sickness in a large number of industrial undertakings. While it is recognised that it would be in national interest to protect the investments in these undertakings by appropriate remedial action, it is also the view of the Government that deliberate mismanagement and financial improprieties leading to sickness, should be dealt with firmly. Various financial institutions have made arrangements to detect sickness in undertakings at an early stage with a view to taking necessary corrective action. To ensure this, the Government proposes to introduce a checklist to serve as 'an early warning system' for identifying symptoms of sickness.

(xxi) *Merger and Amalgamations* : In case of existing sick undertakings which show adequate potential for revival, it would be the policy of the government to encourage their merger (through liberalising tax concessions) with healthy units which are capable of managing the sick undertakings and restoring their viability.

(xxii) *Take-over to be in exceptional cases* : Recourse to the takeover of management under the Industries (Development and Regulation Act, will be had only in exceptional cases on grounds of public interest where other means for the revival of sick undertakings are not considered feasible.

(xxiii) *Industrial Relations* : Deteriorating industrial relations in the last three years has affected a number of important sectors of the economy and have led to a fall in the industrial production. The new policy, therefore, while attaching great importance to the interests and welfare of labour, also considers that the maintenance of constructive and cordial industrial relations in which both labour and management have to co-operate in a responsible manner, is essential for the sustained growth of the economy. The new industrial policy envisages the revival of the tripartite labour conference and it is hoped that, through an attitude of mutual understanding and constructive co-operation, it will be possible to establish higher standards of productivity and industrial harmony.

(xxiv) *Industrial Pricing Policy*: It is the Government's policy that while all reasonable facilities and incentives will be providedto industry, it must recognise and accept its social responsibility particularly in terms of maintaining the price line, avoiding hoarding and speculation, and maximising production on an efficient basis.

(xxv) *Scrapping of District Industries Centres*: The new policy states that the Government must review the scheme of district industries centres and scrap those centres which have not produced benefits commensurate with the expenditure incurred.

The announcement of the new industrial policy came not a day too soon. The industrial situation in the country had been deterioriating fast; not only was there a deceleration of the index of industrial production but the index of industrial production actually showed a negative rate. The deterioration on the price front had been worse still, with the rate of price-rise rising to 4.5 per cent in a single month immediately preceding the announcement of this new policy (June 19 to July 19, 1980). A major cause for this was the industrial stagnation in the country. The new policy sets out to pull the economy out of this morass.

The overall impression that one would get from this new industrial policy is that it believes in the working of a mixed economy in which the private sector is destined to play a more effective role. All in all, the new policy is to be welcomed without many reservations as being pragmatic and sensible. It fits well into the prevailing situation of industrial stagnation.

New Approach to Industrial policy

In amending Appendix 1 of the Industrial Policy Statement of 1980 the Government has in fact carried out a major revision of the Industrial Licensing Policy. The series of measures announced during the course of the year 1981-82 represents a new and pragmatic approach towards industry and trade. By conceding most of the demands for which the organised industry in the country has been pleading, the ball has now been placed squarely in the court of the private sector. Steering clear of a system of controls and procedural regulations in many areas, the Indian Government's latest measures have exhibited a definitely positive attitude toward liberalisation for both domestic and overseas investors.

The new policy throws open five more core sector industries to large houses and FERA companies and allows the industry to enhance capacity by 33.33 per cent over the best production during the last five years ending 81-82. This enhancement is over and above the 25 per cent excess production permitted already. Large houses and FERA companies will moreover be permitted to set up units outside Appendix 1 list, if the units are predominantly export oriented. In case of those exporting items reserved for the small scale sector, exports would have to be as high as 75 per cent and only 60 per cent in the case of others.

The Government has simultaneously liberalised facilities available to non-residents of Indian nationality/origin, for investment in shares of Indian companies. This facility of investing which was available only to individuals so far, is also now extended to overseas companies, partnership firms, societies etc. Non-residents of Indian nationality and origin have been allowed to make investments upto 74 per cent in any of the priority industries. The incentive of higher interests on deposits of one year and above for Non-Resident (External) Rupee Account Scheme and Foreign Currency Non-Resident Account Scheme, will give a fillip to such deposits.

The Reserve Bank of India also announced on April 21, 1981, steps liberalising the norms for investment by non-resident Indians. They can now invest, with repatriation rights, in any new or existing company upto 40 per cent of the capital issued by such a company provided (*a*) the shares are purchased through a Stock Exchange, (*b*) the purchase of such shares in any one company does not exceed Rs. 1 lakh in face value or one per cent of the paid-up capital of the company whichever is lower. Such investments can be made in any industry including those in the 'negative' list of industries as well as in hotel industry. Further non-residents may also invest in shares through Stock Exchanges in India without any limit on the quantum and value of investment, but the repatriation of capital and income earned thereon will not be allowed. They may also freely invest in Six Year National Savings Certificates and such investments and income earned thereon will be free from wealth tax, gift tax and income tax.

Overseas companies, firms, societies and trusts can also freely invest in units of the UTI, securities of Central and State Governments and National Savings Certificates etc. Such investments will enjoy benefits of repatriation of capital as well as income earned thereon.

Thus, the major shift in the policy of the Government, through the introduction of the new policy, has not only enlarged the scope of operations for foreign as well as large Indian companies, but also promotes a better climate for investment and widens the ground for international co-operation.

INDUSTRIAL LICENSING

Industrialisation is a *sine qua non* for economic progress. Government of India is committed to rapid and balanced industrialisation of the country with a view to benefit the common man in the shape of increasing availability of goods at fair and reasonable prices, large employment and higher per capita income. Keeping in view the resources and the national priorities, establishment of industries are regulated through a system of licensing so that Government could scrutinise substantial investment proposals and examine the nature of industry to be set up, its importance and linkage effects to other sectors of the economy.

The Industries (Development and Regulation) Act 1951 is the central legislation which provides the basic framework for directing the flow of investment into various industries for achieving the planned targets. Various administrative bodies have been set up to process the applications for industrial licence, import of capital equipment foreign collaboration etc. These bodies are expected to decide the requests within a stipulated time limit. As a matter of general practice initially a letter of intent is issued stipulating condition subject to which a licence will be issued. The industrial licence is issued on furnishing evidence that the prescribed conditions have been fulfilled.

Under the Act, the entrepreneur is required to obtain prior permission from the technical authorities like the Directorate General of Technical Development (DGTD) for setting up industries, to manufacture any of the items included in the first schedule of the Act. The schedule covers a number of industries like metallurgical industries, electrical equipment, prime movers, industrial machinery, medical and surgical appliances, scientific instruments, machine tools, textiles, chemicals and fertilisers, leather ceramics etc. The act is applicable to a factory wherein 50 or more workers are working with the aid of power and where 100 or more workers are working without the aid of power.

The licence is issued for a specific product, quantity and location. It is also necesary for the following purposes :

(i) taking up the manufacture of a new article in an existing undertaking.

(ii) substantially expanding the capacity of an industrial undertaking in an existing line of manufacture.

(iii) carrying on the business of an existing undertaking to which licensing provisions did not originally apply on account of an exemption order issued by the Government and became applicable thereafter as a result of cancellation of the exemption order and under certain cicumstances as provided in the Act. Such licences are referred to as COB (carrying on business) licenses and

(iv) changing the location of an existing industrial undertaking. There are however, certain industries which are exempted from the provision of licensing on the basis of the investment involved in them, the nature of industry, foreign exchange requirements etc.

The categories of industrial undertakings which are exempted from licensing are:

(1) Small-scale industries, i.e. industrial undertakings with investments, in plant and machinery not exceeding Rs. 3.5 million.

(2) Ancillary units with investments in plant and machinery not exceeding Rs. 4.5 million.

(3) Undertaking other than small-scale and ancillary units with investments, in land, building, plant and machinery not exceeding Rs. 30 million.

(4) Certain notified industries, subject to the condition that (*a*) the item is not reserved for exclusive development in the small scale sector, (*b*) the undertaking is not within the purview of either MRTP Act or Foreign Exchange Regulation Act and (*c*) the industrial undertaking does not require imported capital goods or raw materials or foreign collaboration.

(5) Industrial undertaking (other than those falling under the purview of the MRTP Act and FERA) which take up the manufacture of any items based on the technology developed by any of the laboratories established by the Council of Scientific and Industrial Research and laboratories approved by the Department of Science and Technology. The item of manufacture should not be one reserved for development in public sector or small scale sector or governed by special regulations.

How to apply for Licence

The Government of India have constituted an Inter-ministerial Committee of Secretaries, known as the Foreign Investment Board (FIB) which has the responsibility for scrutinising the foreign collaboration proposals and recommending acceptance or rejection of these proposals. Similarly, there is a Licensing Committee for industrial licences, Capital Goods Committee for import of capital goods and Licensing-cum-MRTP Advisory Committee for cases involving both licence and MRTP clearance. There is also a Project Approval Board (PAB) which deals with composite applications for industrial licence, foreign collaboration and import of capital goods. These committees are serviced by a common office called Secretariat for Industrial Aprovals (SIA) in the Department of Industrial Development (Ministry of Industry). The SIA receives applications for various approvals processes them through the concerned approval committees and technical agencies and issues final order of the Government to each applicant.

(1) In order to obtain an industrial licence from the Government an application should be made in the prescribed form. Application forms can be obtained from the Entrepreneurial Assistance Unit, Secretariat for Industrial Approvals, Udyog Bhavan, New Delhi or from offices of the Indian Investment Centre, or from any of the authorised dealers in Government publications.

(2) An application for industrial licence should be addressed alongwith 10 spare copies to the Secretariat for Industrial Approvals (SIA), Department of Industrial Development, Udyog Bhavan, New Delhi alongwith an 'Account Payee' crossed Bank Draft for Rs. 500 towards licence fee drawn on the State Bank of India, Nirman Bhavan Branch, New Delhi, in the name of Pay & Accounts Officer, Department

of Industrial Development, Ministry of Industry.

(3) Applicants who are registered under section 26 of the Monopolies and Restrictive Trade Practices (MRTP) Act, 1969 should necessarily submit their applications under the said act along with their industrial licence application, or, in the alternative, clearly state the reasons for not submitting the MRTP application. Applications under the MRTP Act, 1969 may be submitted directly to the Secretary, Department of Company Affairs, 'A' Wing, 5th Floor, Shastri Bhavan, Dr. Rajendra Prasad Road, New Delhi-1. A copy of the application should be furnished along with the industrial licence application to the Secretariat for Industrial Approvals.

(4) For expeditious issue of industrial approvals, entrepreneurs are advised to apply to SIA simultaneously, wherever possible, for various approvals like industrial licence/letter of intent, foreign collaboration and import of capital goods. In the case of such composite applications the time limit for a simultaneous disposal of the application for licence, foreign collaboration and capital goods, is 90 days. Even in cases involving MRTP clearance the time limit now is 90 days. In the case of non-MRTP and non FERA units which require only industrial licence, the time limit is 60 days.

Registration

Small-scale and ancillary units do not require any industrial licence or other approval except when the item of manufacture is governed by special regulations. However, undertakings which are exempted from licensing are expected to register themselves with the Directorate General of Technical Development (DGTD) in the Ministry of Industry. Application for registration should be made in the prescribed form. Those who require approval for foreign collaboration and/or import of capital goods must obtain the same before registration by the technical authority is accorded.

Capacity Utilisation and Growth in Capacity

It is recognised that actual production of an industrial unit may not always conform to the licensed capacity. Efficient utilisation of production facilities may result in actual production exceeding the licensed capacity. Similarly, the need for meeting growth in demand for particular items as well as the necessity to allow existing units to produce more, have to be kept in mind. For these reasons, certain concessions have been allowed for production in excess of licensed capacity. These are briefly discussed below:

(i) *Excess production upto 25 per cent:* Industrial undertakings can increase production of articles, for which they are licensed or registered, upto 25 per cent of the capacity so licenced or registered without obtaining a substantial expansion licence provided, (*a*) no additional plant and machinery is installed; (*b*) no additional expenditure of foreign exchange is involved; (*c*) the extra production does not result in additional demand for scarce raw materials; and (*d*) the item is not reserved for the small scale sector.

(ii) *Excess production without limit:* Entrepreneurs who do not come under the purview of the MRTP Act, 1969 or FERA 1973, are allowed to utilise their installed capacity without limit, even though this may be in excess of their licensed capacity. The articles manufactured in these industries should not, however, be those reserved for development in the small scale sector, and further, no additional machinery should be required to be installed. This facility is also available to those undertakings coming under the purview of MRTP Act, 1969 and FERA 1973 provided, the excess production is exported or sold in accordance with the directions of Government.

(iii) *Automatic growth of capacity:* Industrial undertakings operating in the industries included in Appendix-I of the Government Press Note dated 2nd February 1973 can increase their capacity at the rate of 5 per cent per annum and upto a limit of 25 per cent in a 5-year plan period without obtaining a 'substantial expansion' licence under the Industries (Development & Regulation) Act. This is however, subject to certain conditions which are specified in this behalf by the Government. Any increase in capacity under this facility will be over and above the normal permissible limit of 25 per cent in production over the authorised licensed capacity mentioned in sub-para (i) above.

(iv) *Additional capacity in certain cases:* In cases where a large production base would increase the competitiveness of Indian Industry abroad, Government will consider favourably the induction of advanced technology and will permit creation of capacity large enough to make it competitive in world markets provided substantial exports are likely.

(v) *Recognition of existing capacity:* Taking note of the substantial increase in the productive capacity in several industries as a result of higher labour productivity and technological improvements in the last several years, the Government have decided to regularise such capacity in excess of licensed capacity in 34 specified industries. This is subject to the conditions that the concerned industrial undertakings would not instal any additional machinery and the items of manufacture are not those reserved for development in the small scale sector. The facilities mentioned under (i) and (ii) above will also be available on such regularised capacity. In the case of companies coming under the purview of the Foreign Exchange Regulation Act (FERA) and the Monopolies and Restrictive Trade Practices (MRTP) Act, the question of regularisation of excess capacity would be considered by the Administrative Ministries concerned, only in consultation with the Directorate General of Technical Development (DGTD) and the Department of Company Affairs.

Special Procedure for Diversification

The present facilities for diversification without having to obtain an industrial licence are subject to certain restrictions as to foreign exchange requirements, status of the entrepreneurs etc. In addition to such facilities certain specified industries are allowed full freedom for diversification of their production on the basis of a special approval procedure. The specified industries are machinery and machine tools industries, electrical equipment industry, steel castings, forgings and steel ingots, steel pipes and tubes. Diversification is allowed in respect of other items under the name major industry or related industry as specified by the Government. Certain industries having special problems were also allowed to diversify into other industries. For example, in view of the demand problem faced by passenger car industry, Government has allowed units engaged in the manufacture of passenger cars to diversify into other motor vehicles. Similarly, industries falling under the groups industrial machinery and machine tools may be allowed to diversify their production. Likewise, producers of cement may be permitted to fabricate cement machinery and equipment for captive use if the party has necessary facilities to do so. The simplified procedure adopted in all these cases ensures quick disposal of applications for permission for diversification.

In a further liberalisation of the licensing policy, the Government has now permitted the manufacture of any type of motorised two-wheelers without prior official permission. None of the two-wheeler manufacturers will however be allowed to produce vehicles beyond an engine capacity of 350 CC without obtaining prior approval.

The concept of broad banding for licensing purposes, which was introduced sometime ago with regard to selective industries such as machine tools, two and four wheelers, chemical, pharmaceutical, petrochemical and fertilises, machinery and paper and pulp industry has now been extended to 14 more product groups. These include steel pipes and tubes, metallurgical machinery including steel plant equipment, earth moving machinery, agricultural machinery, auto ancillaries, instruments of all types of automobiles, diesel engines, aerial ropeways, marine freight containers, railway wagons and coaches, vacuum and air-brakes, steel fabricated structures, off-shore platform and cranes.

The main objective of the scheme was to provide flexibility to manufacturers for adjusting their product-mix in tune with the market demand. Also such a policy would encourage optimum utilisation of manufacturing facilities and lead to economies of scale. However, this scheme of broad-banding will not be available to items reserved for small scale sector. MRTP and FERA companies also cannot avail this facility if the items are not included in Appendix. I.

MRTP Clearance

Under the provisions of the Monopolies and Restrictive Trade Practices (MRTP) Act, 1969, all those companies, having singly or together with inter-connected undertakings, assets worth not less than Rs. 100 million or which are 'dominant undertakings' (i.e. those undertakings which produce, distribute, supply or otherwise control one-third or more of any goods or services, with assets of the value of not less than Rs. 10 million) have to get themselves registerd as such with the Government. Such companies, commonly called MRTP companies, have to obtain the permission of the Central Government for any substantial expansion of their activities.

Establishment of any new undertaking which would become an inter-connected undertaking of a large or dominant company referred to above would also require the previous permission of the Central Government. The Act does not make any distinction between foreign companies and domestic companies in the matter of applicability of these provisions. Applications under MRTP Act for substantial expansion or establishment of new undertaking, as mentioned above, should be made in the prescribed form with eleven copies thereof and evidence of payment of prescribed fee of Rupees two hundred to the Sectetary, Department of Company Affairs, Government of India, 'A' Wing, 5th Floor, Shastri Bhavan, Dr. Rajendra Prasad Road, New Delhi. If the fee is paid by means of a bank draft it should be drawn in favour of the Pay & Accounts Officer, Department of Company Affairs, (Ministry of Law, Justice & Company Affairs), drawn preferably on Punjab National Bank, Barakhamba Road, New Delhi.

In a major liberalisation move, the Government has decided to exempt the larger industrial houses and companies falling within the purview of the Foreign Exchange Regulation Act (FERA) from seeking prior approval from the Company Law Board for either implementation of new projects or expansion of existing capacities. This was intended to serve the twin purposes of channelising investment from large houses and FERA companies into areas where there was a need and to cut down procedural delays. This liberalisation will be available for a period of five years. However this facility is subject to two conditions, firstly the proposal does not relate to any article that may be reserved for exclusive production by the small scale industrial undertakings and secondly, the owner of the undertaking making the proposal shall submit to the Department of Company Affairs, a memorandum containing the detailed proposal alongwith a copy of their application, wherever required to be made under the Industries (Development and Regulation) Act.

The Government has drawn up a list of 25 industries in keeping with certain specified priorities, where neither the large industrial houses falling within the purview of the MRTP Act nor FERA companies would be required to submit their applications to the Company Law Board prior to submitting them to the Secretariat of Industrial Approvals (SIA). In other words, these companies will be exempt from making applications under Section 21 and 22 of the MRTP Act. They have to file only a memorandum and a copy of the licence application which is submitted to the SIA.

The schedule enlists 27 industries which include pig iron, castings and forgings, alternative energy devices and systems, transmission line towers, electrical motors with starters and internal combustion engines. Electronic components and equipments required for the electronic industry other than specified type of integrated circuits, viz., VLSL and LSI, computer peripherals computer software, magnetic tapes for use in computers and video equipment, hard discs, floppy discs and diskettes for computers, test and measuring instruments, materials for electronics, computers, broadcasting equipment, control instrumentation and industrial and professional electronics, communication equipment. However, exemption in respect of the above electronic components and equipments shall be available only if the MRTP house establishes in depth production facilities vertically integrated : it shall not be allowed to do mere assembly work from the mported kits with regard to the above exempted items.

Motorised two/three/four wheelers automotive components, spares and ancillaries, pollution control equipment, process pumps; process equipment for utilisation of recycling of wastes, chemical process plants, machinery for chemical industry as listed below: (i) rupture discs; (ii) special pneumatic caligrators; (iii) karbate pumps; (iv) centrifugal gas compressors, air compressors, industrial valves, and (v) dairy industry equipment, namely, homogenisers.

Printing machinery such as (i) web for high speed letter press rotary and off-set rotary printing machines having output of 30,000 or more impressions per hour i.e. cylinder speed of 30,000 per hour. (ii) photo/composing/type setting machines and ancilliaries key boards, editing terminals and film/paper processors. (iii) four colour/two colour off-set machines.

Machine tools, tool room products and industrial machinery for drilling and production of mineral oil/natural gas, mechanised sailing vessels upto 10,000 DWT for units with capacity for meeting the requirements of the oil industry in particular. Oil field services, inorganic fertilizers under '18-fertilizers' in the first schedule to the Industries (Development and Regulation) Act, 1951, excluding fertilizer industry dealing with single superphosphate, drugs/drug intermediates.

High technology bulk drugs from basic stages and formulations based thereon with an overall ratio of drugs consumption (from own manufacture) to formulation from all sources of 1 : 5 as listed below: (i) Rifampicin, (ii) Dansone, (iii) Colofazimine, (iv) Primaquin, (v) EMME (Ethoxy Methylene Malonic Ester), (vi) Novaldiamine, (vii) Insulin, (viii) Anticancer drugs, (ix) Vitamin B6, (x) Norgestrel, (xi) Piperazine, (xii) New bulk drugs developed through indigenous research, and Newsprint and Portland Cement.

In addition to 12 bulk drugs and drug intermediates which were delicensed under the scheme of delicensing of 25 broad industries, the government has further delicensed 82 essential and mass consumption bulk drugs and formulation based thereon. The industrial units engaged in the manufacture of these items need not obtain a licence as required under the IDR Act, subject however to the condition that they do not fall within the purview of the MRTP Act or FERA and the article of manufacture is not reserved for the small-scale sector. Another condition is that industrial unit should not be located or proposed to be located within the standard urban limits of a city, having a population of more than 10 lakhs or within the municipal limit of a city with a population of more than 5 lakhs.

The delicensed industrial units will however be required to register themselves with the Secretariat for Industrial Approvals, Department of Industrial Development. The eligible units would be required to submit to the SIA the application for registration in the prescribed form. The registration of the delicensed industrial undertakings will be subject to other clearances from the concerned State and Central authorities with regard to the pollution control, foreign collaboration and capital goods.

Patents Legislation

The Patents Act, 1970 has been enacted with the main objective of promoting research and invention and accelerating industrial growth. The Act provides for due protection and reasonable remuneration to the inventor. The provisions of the Act also ensure that foreign patentees are treated on the same footing as Indian patentees and get ample opportunities to utilise their inventions made in India either by themselves or through their licencees. All patents are normally granted for a period of 14 years except in the case of foodstuffs and drugs where the limit is 5 years from the date of sealing of patents or 7 years from the date of filling of the complete specifications whichever period is shorter.

NEW ELECTRONICS POLICY

The new electronics policy announced by the Government of India on March 21, 1985 is yet another attempt by the Government towards giving a new deal to sophisticated high technology areas and to give greater scope for free enterprise in building a better future for the country.

The set of 'integrated policy measures' for Electronics and Science and Technology provides for liberalised licensing and a bigger role for the FERA and MRTP companies as well as Indian companies with foreign equity upto 40 per cent. The private sector is being asked to make larger investment, with the Government restricting its own participation. It is programmed to raise electronics production to Rs. 1,00,000 crores by 1989-90.

Indian companies including those with 40 per cent or less foreign equity will no longer be precluded from any field of electronics which is open to the organised private sector.

The Government would welcome foreign equity companies (those with 40 per cent foreign equity) to set up manufacturing facilities for electronic components, materials and other closely held technologies, where the country has not been able to invest sufficiently in research and development. Import of technology is to be permitted freely to develop an appropriate electronics base in the country. However, industries will be encouraged to establish in-house technology base so as to minimise repeated import of technologies.

The number of electronic items exempted from MRTP Act has been increased. The exemption is being extended to materials for electronics, computers, broadcasting equipment, control instrumentation, industrial and professional electronics and communication equipment.

The concept of broad-banding of licenses has been extended to the area of electronics also. This would enable manufacturers to change their product-mix in keeping with fluctuating demand patterns or high profit areas, leading to optimal utilisation of investments. The 'Broad-band' licences will be issued to items of entertainment electronics such as radio, TV and tape recorders. electronic toys, computer peripherals, electronic test and measuring instruments and semi-conductor devices. Government had earlier removed excise duty on 24 types of electronic components, computers and computer peripherals to bring prices of locally manufactured goods closer to international levels.

For video cassette recorders, the Department of Electronics or its designated agency will purchase the technology and the deck mechanism will be manufactured by units in the public or private sector. The existing licensed or registered units that wish to enhance their capacity should apply afresh and their applications will be considered along with other applications.

The existing industrial and technology policies have also been modified in respect of electronic watches. For the manufacture of watch modules, besides the semi-conductor complex, a second unit in the private sector will be allowed.

It has also been stated that once a licence is issued, the licence-holders will be assured of liberal upward growth. In approving phased manufacturing programmes, the government will ensure that reliance on imported populated printed circuit boards is reduced and genuine domestic manufacture is encouraged. All electronic units in the country will have to compulsorily submit a single proforma every year, so that the government has detailed data for planning the industry in an integrated manner.

The liberalised computer policy, earlier announced will be suitably extended to electronic control instruments, instrumentation and systems, industrial and professional electronics and data communication equipment. The electronics components industry, already delicensed, has further fillip towards large scale production through de-reservation of components hitherto reserved for small sector. Manufacture of components from intermediate levels has also been allowed. In the case of certain heavy investment areas viz., bipolar, linear and digital integrated circuits, assembling from intermediate stages has been permitted, provided an investment of 5 crores or more is made.

Since electronics is a knowledge-intensive area characterised by rapid innovtaion as well ' obsolescence ', manpower development assumes crucial importance. With this in view, various programmes are undertaken especially in the area of computer application. Setting up of a centre for developnent of telematics, a national microelectronics council and a centre for development of materials for electronics are some of the other steps taken by the government for the promotion of the industry in India. These measures are being envisaged to reduce dependence on imported technologies and promote indigenous research and development.

NEW COMPUTER POLICY

A revised computer policy was announced by the Government of India on 19th November 1984. Broadly, its objectives are the following :

(1) To enable manufacture of computers based on latest technology at prices comparable with international levels and progressively increase indigenisation consistent with economic viability.

(2) To simplify existing procedures to enable users to obtain computers from indigenous/overseas sources.

(3) To promote appropriate applications of computers which are of development-catalysing nature, with due regard for long-term computerisation.

The revised policy and procedures pertains to computers, their associated sub-systems (peripherals and software) and computer-based systems in which computer is a major sub-system.

A. Manufacture

1. All regulatory measures concerning manufacture like letters of intent, industrial licences, foreign collaboration etc., will be exercised by the Inter-Ministerial Standing Committee under the department of Electronics (DOE), designated for this purpose. All applications should be made directly to the Computer-Communication and Instrumentation Wing of the DOE.

2. Manufacture of micro/mini computers including personal computers will be permitted to wholly-owned Indian companies and those with foreign equity not exceeding 40 per cent.

3. Manufacture of CPU mainframes and super mini-computers will be reserved for the public sector for two years.

4. A new classification ' Computer and Computer-based systems ' will be introduced for the items covered under this policy and will be entitled to investment allowance and other incentives available for new industries. Software development and manufacture is classified as ' industry ' and is exempted from locational policy.

5. Manufacture of micro and mini computer systems will be permitted without any restriction on capacity, except a minimum requirement of a viable capacity and giving scope for progressive indigenisation. Such indigenisation and progressive updating of technology will be ensured by the DOE.

6. For companies supplying CPUs, peripherals and other sub-systems on original equipment manufacture basis, liberal import know-how is permitted and the excise duty will be relatively low, with appropriate set-offs.

7. Price purchase preference to public sector enterprises will be available for government and public sector purchases as per applicable policies.

8. Import of designs and drawings will be allowed under OGL for R & D units recognised by the DOE.

9. Adequately liberal import of designs and drawings, systems software and utility software will be initially permitted for manufacture, and later regulated.

10. The DOE will take appropriate measures for the promotion of standardisation around certain LSI/VLSI chips and peripherals.

11. Import of software, where allowed will be preferably in the form of source code. Special encouragement will be given to central purchase of source code of software and its distribution.

12. Revision of duty structure on components will be recommended by the DOE from time to time so as to make the final products internationally price-competitive.

13. Procedure for import of raw materials and components for actual use of the manufacturer is being simplified and expedited.

14. Appropriate protection will be accorded to indigenous computers through fiscal measures like protective import duty as recommended by DOE from time to time. These duties may be progressively reduced in order to encourage reductions in the cost of domestic manufacture.

15. Procedures will be evolved to make indigenous manufacture competitive vis-a-vis imports which do not attract duty if imported by educational, defence and R & D establishments.

16. Letter of approval would face cancellation, if effective steps are not taken within the stipulated period.

17. Local manufacturers would be encouraged to provide bilingual input-output facility.

18. Computer applications in any social or economic sector will be promoted by encouraging the setting up of systems engineering companies.

B. Import

1. Applications for import of computers will be examined by the Inter-Ministerial Standing Committee under the DOE.

2. Imports of computers, computer-based systems and sub-systems for integrating with imported CPU will be permitted only to actual end users.

3. Domestic computers will be enabled to compete with imported computers by leving protective duty. Actual users will be allowed import of standardised EDP systems, costing less than Rs. 10 lakhs (c.i.f.) by paying sufficiently high protective duty. Such duty will be lowered from time to time in order to make local manufacture progressively more competitive with respect to equivalent imported systems.

4. For import of computers and predominantly computer-based systems costing more than Rs. 10 lakhs (c.i.f.) the actual users would be required to apply to the DOE who would examine the application from the point of desirability of applications and indigenous availability. The user will be permitted to import at a low duty from a standardised list which would be announced periodically by the DOE. The DOE would negotiate with the vendors of the models in the standardised list and execute a rate contract where possible so as to take advantage of the substantial reduction in foreign exchange for bulk purchase.

5. Where import of computers/sub-systems are required as part of a justified proprietory purchase or as any special purpose computer not locally available, clearance of the DOE is necessary. A low-level of duty will apply.

6. After clearance the user will be free to negotiate directly and take further procurement action.

7. If for a justifiable special reason the users wish to avail of DOE's assistance in the actual procurement of the computer they may approach the DOE.

8. Import of application software not available in the country will be permitted to actual users with low duty levels on a case to case clearance by the DOE. The actual user may avail of OGL facility with a sufficiently high protective duty for any software after informing in writing, the DOE. Where possible, the DOE

would arrange for centralised import of software for distribution to users on no-profit no-loss basis.

9. Maintenance of imported computers/systems will be done either in-house by the actual user or by the CMC Ltd. or by any other agency designated by the DOE. The agency responsible for such maintenance will be allowed to import spares, tools, test equipment and software support for warranty maintenance on the basis of CCP licence, if so required.

10. All import applications will be processed by the DOE within two months of the registration of application in complete form as per proforma notified from time to time.

11. Actual users who are required to use Hindi under the Official Languages Act will be encouraged to augment their computing facilities for input-output processing in Devanagari in addition to English.

12. Within the ambit of this policy framework, all details of procedures will be laid down by the DOE which will be empowered to steer the implementation and interpret policies and procedures.

C. Software Development and Export

The DOE will set up an extensive research, design and development facility to develop indigenous know-how, and also import know-how on a centralised basis and to absorb and improve on this know-how on a continuous basis. This organisation would cumulate a standardised menu of know-how for making them available to users.

The DOE will also set up a Software Development Promotion Agency to give an impetus to the growth of manpower intensive software development efforts for exports and domestic requirements.

The Software Export Promotion Policy of January 1982 will continue to apply, but will include certain modifications.

Duty Structure

Customs duty has been reduced in the case of parts for manufacture of peripherals and microprocessor-based equipment from 80 per cent to 5 per cent ; for software in object code in any media from above 100 per cent to 60 per cent ; software in source code as printed matter on paper from above 100 per cent to nil ; software in source code other than as printed matter on paper from above 100 per cent to 60 per cent ; floppy disk drives, winchester disk drives and serial printers including dot matrix daisy wheel printers from 75 per cent to 60 per cent ; line printers, paper tape reader, paper tape punch, card reader, card punch, magnetic tape/cassette/cartridge drive, printer politters, digitisers, magnetic disk drives other than floppy disk drive and winchester disk drives from between 75 and 196 per cent to 25 per cent ; and computers not indigeously available from 135 per cent to 60 per cent.

FOREIGN COLLABORATION IN INDIAN INDUSTRY

The need for international interdependence has always been recognised for the fuller development and exploitation of the potentialities of a nation and the capabilities of its people in order to reap maximum economic benefits. Today, this notion of interdependence has developed into a more meaningful, more complex and more complete concept which stresses that all countries, whether developed or developing, rely on their links with the rest of the world for their growth and prosperity. The phenomena of foreign trade, foreign aid and foreign collaboration are to be seen not merely as 'acts of charity' of 'the affluent' towards 'the needy' but as manifestations of this concept of interdependence, as contributions towards a better world that yields maximum welfare to every involved party, individually and collectively.

From the point of view of India, the fast developing economy, investment from abroad is a means of bridging the two crucial gaps; the savings gap and the foreign exchange gap. It acts as a catalyst in the process of economic development. However, to the unique requirements of nation building in India—with its vast reservoirs of material and human potential, what is more important than the value of foreign investment as a source of capital is that, it acts as a vehicle for the transfer of modern technology. Therefore, as a rule the flow of foreign capital unaccompanied by foreign technology has been restricted in this country.

The number of foreign collaborations approved has been steadily increasing in the last few years. Till the end of 1984 more than 9000 foreign collaboration agreements were approved by the Government. Of these, 1669 agreements also involved financial participation by foreign parties in the equity capital of Indian enterprises utilising the foreign technology covered by the agreements. From the figure of 591 in 1982, it has risen to 752 in 1984. Of the 752 approvals 601 is non-financial in nature, which included 473 technical collaborations and 128 for supply of drawings and designs. Financial-cum-technical collaborations during 1984 totalled 151 as against 115 in 1982. The approvals sanctioned in 1984 were in respect of 36 countries, the most prominent among them were the U.S., West Germany and the U.K., which formed 54 per cent of total approvals. Along with Japan, France, Italy and Switzerland, these seven countries accounted for nearly four-fifths (79 per cent) of total approvals.

Countries	1982	1983	1984	Total (1982-84)
1. U.S. ..	110	135	148	393
2. West Germany ..	110	128	132	370
3. U.K. ..	107	119	126	352
4. Japan ..	51	58	78	187
5. France ..	28	40	38	106
6. Italy ..	37	30	38	105
7. Switzerland ..	41	47	30	118
Sub-total (a) ..	484	557	590	1,631
8. Others ..	107	116	162	385
Total (b) ..	591	673	752	2,016
(a) as % of (b) ..	81.9	82.8	78.5	80.9

An encouraging feature of foreign collaborations in recent years has been the increasing participation by the non-resident Indians in financial and or technological investment in India. In 1981 there was only one non-resident Indian proposal approved whereas the number rose to 20 in 1983 and 34 in 1984. Countrywise the largest number of collaboration in NRI cases, approved in 1984 was from the U.S. (19) followed by West Germany (9), the U.K. (4) and the UAE (3). The collaboration cases related to the manufacture of a number of product ranges such as automobiles and auto-ancillaries, chemicals, electronic and electric items, machinery instruments and machine with hand tools.

The basic policy of the Government of India is to welcome foreign private investment and collaborations on a selective basis, in the fields in which such investment and collaborations would be of an advantage to the Indian economy. With the technological achievements and modernisation already attained by India, the country's current requirements for foreign investment and collaborations are essentially in technically advanced fields such as chemicals, petro-chemicals, electronics, items of industrial machinery etc. Besides, the areas of sophisticated technology and of high priority, foreign investment and collaborations are also liberally welcome in industries which are predominantly export-oriented i.e. where the minimum exports are 60 per cent of the total production. For the export-oriented industries, foreign collaborations may be considered even in the low priority industries.

India looks upon foreign investment as a vehicle for the transfer of modern technology rather than as a source of capital. As such foreign investment not accompanied by foreign technology is not allowed. However, Government of India has relaxed this policy in respect of investors from Oil Exporting Developing (OED) countries. Accordingly, investments upto 40 per cent in equity of new ventures, without being linked with technology transfer, can now be made by investors from OED countries in specified industries. The Government has already allowed non-residents of Indian origin to invest in Indian industrial units under certain schemes and subject to certain conditions even if there is no transfer of technology along with the investment. In order to facilitate flow of modern technology, collaborations with foreign parties who are in a position to offer such technology are allowed in a number of industries except those in which foreign technology is not considered to be necessary. Proposals involving foreign financial participation along with technology are considered on merits.

As a matter of policy, the major ownership and effective control of undertakings was to be in Indian hands. The Government however permitted in a few cases foreign capital to have majority control of an enterprise. A few concessions were extended and industrial licensing procedures were streamlined to avoid delays in approvals. The Indian Investment Centre was set up in 1961 to bring together Indian and foreign entrepreneurs. The Government of India decided in 1972 to permit wholly-owned subsidiaries of foreign companies, provided they undertake to export 100 per cent of their output. In case the new venture is to export less than 100 per cent of its output, the extent of permissible foreign capital participation would be subject to negotiations with the Government.

Equity Participation

During 1972 the Government developed a precise formula setting out the limits of participation by the Indians in foreign subsidiary companies if they undertook plans of output extension. Thus companies with foreign holdings exceeding 75 per cent would have to raise 40 per cent of the estimated cost of expansion by issue of additional equity to Indians. The corresponding proportion for companies with 60-75 per cent foreign holdings was 33.3 per cent and those with 51-60 per cent foreign ownership was 25 per cent.

There was no specific law to regulate foreign investment in India until the Foreign Exchange Regulation Act was passed in 1973. The Act stipulates that in areas in which foreign investment is permitted, it should generally be restricted to 40 per cent of the equity capital. However, higher percentage of foreign equity upto a maximum of 74 per cent would be considered in case of priority industries involving sophisticated technology which is not available in the country or in cases where the venture is largely export-oriented. The percentage can go upto 100 in case of projects set up exclusively for exports. The foreign share capital should be contributed by way of cash without being linked to tied imports of machinery and equipment or to payment for know-how, trademarks, brand names etc. The foreign companies which were operating in India on the date of commencement of the Act were directed to adjust their equity levels in accordance with the above policy.

CFT 1531 (V 12/9/18 MYSO

Technical Collaboration

Technical Collaboration are considered on the basis of the annual royalty payments which are linked with the value of actual production. The percentage of royalty will depend on the nature of technology but should not ordinarily exceed 5 per cent. Higher rate of royalty may be considered in exceptional cases or in respect of those ventures which would export a major part of their production. Royalty payments are subject to Indian taxes. Wherever appropriate, payment of a fixed amount of royalty per unit of production will be preferred. Lumpsum payments may also be considered in appropriate cases for the import of drawings, documentation and other forms of know-how. In deciding on the reasonableness of such payments, account will be taken of the value of production so that the lumpsum and recurring royalty if any, is an acceptable proportion of the value of production. The basis of computation of royalties payable by Indian companies to their foreign collaborators has been changed. Royalties will now be paid on the basis of *f.o.b.* prices of the indigenised products of collaborators, produced in their respective countries, *minus* standard bought-outs. This replaces the practice hitherto in vogue of computing royalties based on ex-factory prices of products *minus* excise duties and the standard bought-out components. This is expected to result in a huge saving of foreign exchange on a recurring basis.

Once the foreign collaboration is approved by the Government, remittance of royalties, dividends etc, is freely allowed. Government also allows repatriation of capital invested by foreigners in India including capital appreciation if any, subject to regulations laid down there for under FERA. Application for extension of collaboration agreements are scrutinised carefully and extensions are agreed to, only if the Government is satisfied that there is a need for them. Extensions are allowed under the following circumstances : (1) If the item of manufacture is sophisticated and it is necessary that the period of collaboration be extended to enable the Indian party to fully absorb the know-how ; (2) If the collaboration agreement involves the manufacture of a large number of items and the Indian party could start manufacturing some of the items only at a later stage. In such cases extension is granted only in respect of these few items ; (3) If it is felt that such extension would be in the interest of the export of the manufactured product.

Even where extensions are granted, every effort is made to reduce the rate of royalty paid, with regard to the nature of the product and the period of extension.

Guidelines for Entrepreneurs

The following are the guidelines which the entrepreneurs are required to take note of while negotiating proposals for foreign collaboration so as to ensure that such proposals conform to the policies of the Government.

(i) They should, to the fullest extent possible, explore alternative sources of technology, evaluate them from a techno-economic point of view and furnish the reasons for preferring the particular technology and the source of imports ;

(ii) The Indian party should be free to sub-license the technical know-how/product design/ engineering design under the agreement to another Indian party.

(iii) The royalty wherever allowed will be calculated on the basis of the net ex-factory sale price of the product exclusive of the excise duties, *minus* the cost of the imported components, irrespective of the source of procurement including ocean freight, insurance, custom duties etc. The payment of royalty at the above rates will be restricted to annual licensed/registered capacity plus 25% in excess thereof. In case of production in excess of this quantum, prior approval of the Government would have to be obtained regarding the terms of payment of royalty in respect of such excess production ;

(iv) There should be no requirements for the payment of a minimum guaranteed royalty regardless of the quantum and value of production.

(v) Arrangement or clauses which in any manner bind the Indian party with regard to the procurement of capital goods, components, spares, raw materials, pricing policy, selling arrangements etc. should be avoided ;

(vi) To the fullest extent possible, there should be no restrictions of free export to all countries ;

(vii) The use of foreign brand names will be permitted for internal sales ;

(viii) Every effort should be made to assimilate the technology within the initial duration of the agreement. Requests for extension of duration are not favoured ;

(ix) Suitable provisions should be made for the training of Indians in the fields of production and management. There should also be adequate arrangement for R & D engineering design, training of technological personnel and other measures for absorption, adaptation and development of the imported technology. Such measures can be undertaken through in-house facilities of the entrepreneur or in collaboration with recognised engineering, R&D and consultancy organisations or institutions where necessary facilities exist ;

(x) Consultancy services required to execute the project should be obtained from Indian consultancy firms. If foreign consultancy is also considered necessary, an Indian firm should be the prime consultant ;

(xi) If the proposed item of manufacture is covered by a patent in India, it should be ensured that the payment of royalty or lumpsum payment for the duration of the agreement, would also constitute compensation for the use of patent rights till the expiry of the life of the patent and that the Indian party would have the freedom to produce the item even after the expiry of the collaboration period without any additional payment ;

(xii) Collaboration agreements will be subject to Indian laws.

Application for foreign collaboration should be submitted with 16 spare copies and an equal number of copies of covering letter to the Secretariat for Industrial Approvals (Foreign Collaboration Unit), Department of Industrial Development in the form prescribed. No fee is required.

Entrepreneurs desirous of setting up an industry with foreign collaborators have to first obtain a letter of intent, if the item of manufacture pertains to a scheduled industry and the undertaking is not exempt from licensing under the current licensing policy of the Government. Entrepreneurs may submit composite application for a letter of intent as well as foreign collaboration. In such cases it is the intention of the Government to give a simultaneous disposal of both the applications. Where the proposed investment is exempt from licensing, entrepreneurs can straightway apply for the approval of foreign collaboration.

Special Procedure for the Import of Designs and Drawings

Government of India has introduced a simplified procedure for the import of designs and drawings by undertakings engaged in manufacturing activities. According to this procedure, import of drawings and designs not exceeding Rs. 10 lakhs in value per year is permitted to industrial undertakings. Applications for this purpose have to be submitted in the prescribed forms (with 5 spare copies) to the Secretariat for Industrial Approvals.

New Industrial Policy

In April 1982, the Government of India has carried out a major revision of its earlier industrial policy. The FERA companies have now been allowed greater leeway and fresh avenues of operation have been opened up. Five more core sector industries including high technology reproduction and multiplication equipments have been thrown open to these companies. They have been, in addition, permitted to set up units outside the Appendix 1 list, if the units are predominantly export-oriented. A list of industries open to these companies has been specified and this list comprises 24 major industrial groups.

This has been done with the intention of creating a better investment climate and enhancing production which is interpreted as a step towards *laissez faire* economy. A new spate of investment was expected, which would open the gates for greater industrial prosperity. The response from the industry is already showing encouraging signs. Several enterprises have come forward to take advantage of the new liberalised policy towards foreign collaboration. To quote but one example, in the two-wheeler industry (which has been recently thrown open to foreign collaboration), a number of enterprises have signed up foreign collaboration agreements with world leaders and their products under international brand names made entry into the domestic market in late 1983.

Although this phenomenon would be widespread, considering the large number of foreign collaborations granted in the motor cycle and moped sectors, it would be much more pronounced in the case of scooters where four new entrants will be competing with Bajaj Auto, the existing monopoly manufacturer. The new entrants are Andhra Pradesh Scooters, Lohia Machines (both of whom will manufacture Vespa Scooters in collaboration with Piaggio of Italy), Kinetic Engineering (in collaboration with Honda of Japan), and Mr. N. Krishnan collaborating with Suzuki of Japan.

Under the liberalised policy, the Government has thrown open the field of micro and mini computers to the foreign companies with the facility of 40 per cent equity participation. In view of the fact that the new policy might result in the flooding of indigenous market with the personal computers of the foreign equity companies, the Department of Electronics constituted by the Government has decided to permit foreign collaboration with a pre-requisite of export obligations. The quantum of exports would depend on the volume of production and the ratio of equity of the foreign collaboration. The export obligations would not only check the domestic sales of particular company but also ensure export earnings. The exports could be either through buy-back arrangement or direct exports to other countries. In order that the indigenous company may have a say in the management and the marketing of the product, the Government insists on the transfer of the proprietory right to the indigenous company. This would ensure gradual transfer of technology as well. The third condition stipulated by the Government relates to the balancing of imports by the company with exports. This, the Government felt was necessary to ensure that collaboration did not entail any outflow of foreign exchange.

Appendix : Illustrative list of industries where no foreign collaboration, financial or technical, is considered necessary.

(1) *Metallurgical industries :* Ordinary castings, bright bars, structurals, antimony, sodium metal, electrical resistance heating, aluminium litho plates etc.

(2) *Electrical equipment :* Electric fans, common domestic appliances, winding wires and switches, AC motors, cables and distribution transformers.

(3) *Electronic components and equipments :* General purpose transistors and diodes, paper, mica and variable capacitors, TV receivers, tape recorders, teleprinters, P.A. systems, record players/changers.

(4) *Scientific and industrial instruments :* Non-specialised types of valves, meters, weighing machinery, mathematical, surveying and drawing instruments.

(5) *Transportation :* Railway wagons, bicycles.

(6) *Industrial machinery :* Building and constructional machinery, oil mill machinery, conventional rice mill machinery, sugar machinery, tea processing machinery etc.

(7) *Machine tools :* Forged hand tools and general purpose machine tools.

(8) *Agricultural machinery :* Tractor drawal implements, power tillers, foodgrains dryers, agricultural implements.

(9) Miscellaneous mechanical engineering industries.

(10) Commercial office and household equipment of common use.

(11) Medical and surgical appliances.

(12) *Fertilizers :* Single superphosphate, granulated fertilizers.

(13) *Chemicals :* Acetic acid, ethyl chloride, viscose filament, yarn/staple fibre, sulphate of alumina, potassium chlorate, fatty acid and glycerine, butyl titanate, silicagel, ethyl ether etc.

(14) *Dyestuffs :* Benzidine, O-tolidine, carbozole dioxazine violet pigment, cadmium sulphide orange.

(15) *Drugs and Pharmaceuticals :* Cafferine (natural), phenyl butazone, tolbutamide, paracetamol, phanacetin, diasgenin, clofibrate, 4-hydroxy cumarin, xenthopotoxin, calcium gluconate, glyceryl gulacolate, colchicina, diazepam, balladonna, chlordia zepoxide etc.

(16) Paper and pulp including paper products.

(17) Consumer goods.

(18) Vegetable oil and vanaspati.

(19) *Rubber industries :* Viscose tyre yarn, metal-bonded rubber, latex foam, rubberised fabrics, bicycle tyres and tubes.

(20) *Leather, leather goods and pickers :* Belting leather, cotton and hair finished leather, picking bands, vegetable tanning extracts, fat liquors other than synthetic.

(21) Glass and ceramics.

(22) Cement and gypsum products.

(*Note :* This list is illustrative and not exhaustive. Clarification of details within the broad headings is the responsibility of administrative ministries.)

New Procedures

The Government of India in August 1985 announced a new procedure for foreign collaboration agreements in order to eliminate the implementation delays caused by the prevalent procedure. The object is to encourage speedier implementation of technology upgradation. The new procedure is outlined below :

(*a*) After the clearance on foreign collaboration is given by Project Approval Board and Foreign Investment Board, the Secretariat for Industrial Approvals, would issue the approvals.

(*b*) In the letter of approval to be given by the SIA, the following clauses would be added : 'This letter of approval No. . . . . dated . . . . . . issued by the Secretariat for Industrial Development (SIA) with regard to the present collaboration is made a part of this agreement and any provision of this agreement not covered by the said letter or is at variance with the provisions of the letter shall be void and not binding on the Government or Reserve Bank of India. If a question arises as to whether a provision in this agreement is or is not covered by the government approval, the parties here do agree that the decision of the government in the Department of Industrial Development shall be final.'

(*c*) To ensure technology absorption and to promote R & D efforts, the annual report of the Indian company would contain a chapter on the absorption of technology. This chapter would also indicate research and development efforts made by the company.

(*d*) Wherever the words 'taken on record' occur in the standard conditions, they would be substituted with 'after the agreement is filed with the Reserve Bank of India.'

(*e*) A copy of the collaboration agreement signed by both the parties would be furnished to the Administrative Department/Ministry referred to in the letter. One copy should be sent to the following :

(1) SIA (FC-II Section) ; (2) Department of Science and Industrial Research ; (3) Ministry of Finance (Department of Economic affairs). For purposes of the aforesaid provisions, the foreign collaboration approvals issued by the Secretariat for Industrial Approvals (SIA) in the Department of Industrial Development or as the case may be, by the concerned Ministry/Department of Union Government would be treated as approvals by the Union Government.

INDIA'S JOINT VENTURES ABROAD

The metamorphosis that India has undergone in the field of joint ventures is commendable. From a state of heavy dependence on foreign countries for technology, India has now transformed itself into a supplier of the same to other countries. Apart from technical know-how and consultancy, India is now exporting projects as diverse as roads, transmission lines, airports, townships, power stations and steel mills. India's presence is growing day by day in many of the countries of Asia and Africa, especially in the Middle East, where she is now collaborating in industrial and other ventures with almost every sheikdom. But the transformation is not complete as yet and India is still very much in the embryonic stage as far as joint ventures are concerned.

The chief reason attributed to India emerging as a supplier of know-how and projects is that her technology, being less sophisticated than the technology of industrialised nations, suits well the developmental needs of the developing countries. Having taken the road to industrialisation a few years ahead of the other developing nations, India has had more experience in modifying sophisticated technology to suit her needs than other developing nations could do for themselves. By virtue of her experience, she is now in a position to offer this highly prized intermediate technology to other developing countries. This technology offered by India has found ready acceptability in most of the developing countries because of the similarity in socio-economic conditions and its labour-intensive character.

India's debut in the field of joint ventures was the establishment of a textile mill project in Ethiopia by the Birlas in 1959. Initially, the pick-up of the ventures abroad was rather slow and the sixties proved to be a period of lull. In the early sixties, many of the joint ventures approved by the Government could not be implemented largely because of lack of experience and inadequate groundwork on the part of the Indian ventures. The seventies, however, turned out to be a comparatively better decade than the sixties. Most of the joint ventures existing today, took shape during this period. The number of joint ventures by India has been increasing steadily since the late seventies and as on 1st July 1984 there were 228 such ventures with an investment of over Rs. 120 crores in about 40 countries including developed market economies. Of this, 134 projects with equity investment of Rs. 46.4 crores have already become producing units and the remaining 94 ventures are under various stages of implementation. Together, these units have been able to generate exports worth Rs. 115 crores, consisting of plants, machinery, components, spares and raw materials. A matter of gratification is that 40 of these projects are located in the developed market economies like U.K., U.S.A., France, West Germany, Switzerland, Yugoslavia, Australia and Cyprus.

An analysis of the progress of Indian joint ventures abroad reveals that the preference for countries for setting up these ventures has been changing from time to time. In the early sixties the preference was for countries of the African continent such as Kenya, Ethiopia and Nigeria. In recent years, the preference is for countries in the Mid-East. The considerations for the preference are several and include political and economic stability, industrial incentives available, size of the market etc., in the participating country.

The petro-dollar boom contributed greatly to the establishment of many joint ventures and the Middle-East has become one of the most attractive regions for Indian joint ventures. Today, the Middle East is a very fertile ground for India's joint ventures especially in construction services and civil engineering. It is significant that many Indian construction firms both in the private and public sectors have been able to win several prestigious contracts in the Gulf countries. Primarily, the reason for our success in these countries is geographical, i.e. our proximity to the Middle East. Secondly, we have a surplus of construction workers in our country who could be profitably deployed there.

Ventures in Middle East

India's Principal co-ventures in the Mid-East are Kuwait, Oman, South Yemen, Saudi Arabia, Jordan, Iran and Iraq. Recently, the International Airports Authority of India (IAAI) was awarded a contract by South Yemen for the construction of an airport at Riyan. In March 1981, Bridge and Roof. Co. had secured a prestigious contract valued at Rs. 40 million from the Government of Kuwait for construction work at the Shuwaikh Power Station. In 1980, BHEL completed a Rs. 720 million power project executed on a turnkey basis in Saudi Arabia. Two countries in the Mid-East which raised great hope for our ventures were Iran and Iraq. But the war between these two countries has disrupted construction activity there and our companies had to lose quite a few projects. The Engineering Projects India (EPI) alone had to lose three projects in Iraq. Though the Middle East holds out a great potential for our ventures, at present the South-East Asian countries, notably Malaysia, Indonesia, Thailand, Phillipines, Hong-Kong and Singapore account for a majority of our ventures.

Ventures in South East Asia

Most of India's joint ventures in the region are coming up in Indonesia and Malaysia. India's colloboration with Indonesia are in areas such as steel mills, paper manufacture, iron ore, shipping, crude oil and gas. Indonesia is also interested in the small scale sector. The National Small Industries Corporation (NSIC) is setting up more than 200 industrial units in Indonesia on a turnkey basis. Next to Tanzania, Iran, Afghanisthan and Bangladesh, this is the fifth country to seek Indian expertise in this field. Recently, Indonesia has sought the services of MECON for setting up a 2,00,000 tonne annual capacity cold rolling mill complex and three small cold rolling mills, each with a capacity of 50,000 tonnes. MECON will be helping Karakatau Steel of Indonesia in setting up the mills. The Project Equipment Corporation (PEC) has also won a contract for the setting up of a 2000 tonne cement plant in Pedang, Indonesia on a turnkey basis. In the private sector, Voltas, one of the companies in the Tata Group has bagged a few projects in Indonesia for the generation of power, water drilling and dripping sprinkler irrigation system.

Malaysia tops the list of countries hosting Indian joint ventures. Indian investment there, grew steadily in the seventies and we rank sixth as their major source of foreign investments. By 1981 around 70 joint venture projects with Indian interests had been approved in that country. Most of the joint ventures in Malaysia have been entered into by India's private sector. TEXMACO, a company belonging to the Birla group has set up a massive paper manufacturing complex in Malaysia. Tata Engineering and Locomotive Company (TELCO) has set up a Tata vehicle assembly plant there. The House of Mafatlals has taken up a project in Malaysia for the manufacture of High Density Polythelene. Tata Oil Mills has set up a palm oil project in Malaysia which is claimed to be the most integrated and diversified processing facility in the world. Gwalior Rayon, also being interested in joint projects, is negotiating with the Malaysian Government for a paper-cum-pulp manufacturing complex in the state of Sabah. The joint projects in Malaysia have invariably been the preserve of the top business houses in India.

Singapore, having a splendid location and a good harbour is well suited for Indian joint ventures in South East Asia. A few joint ventures, have been entered into with Singapore in recent years. One prestigious venture is the one entered into between The Economic Development Board of Singapore and Hindustan Computers Ltd. A new company, christened the Far East Computers Ltd. has been formed by these two ventures for the production of computers. HCL's share in the new company is 43 per cent. This computer project is one of the latest additions to the range of our joint ventures and marks a diversion from our traditional ventures. The Tea Trading Corporation has also entered into a joint venture with Singapore based 20th Century Foods for tea packaging-cum-marketing.

More recently, several Indian enterprises have taken advantage of the favourable conditio prevalent in the Island Republic triggering what has been described as an 'explosion of Indian joint ventures'. Raunaq Enterprises and Punjab Semi-Conductors have co-sponsored a U.S. $ 1.62 million plant for the manufacture of silicon semiconductor devices including rectifiers, power-transistors and voltage regulators. Orion Corporation of Hong Kong is the foreign collaborator. A project for manufacturing instruments of horology, systems, controls & custom-made equipment is in the offing. Another massive project already in the pipeline is a 27 million Singapore dollar plant sponsored by Pratap Steel Rolling Mills in collaboration with Concast of Zurich for the manufacture of steel ingots, billets and rolled products.

Amongst India's neighbours, Sri Lanka and Bangladesh have sought her collaboration. In January 1980, Dacca had sanctioned 10 joint projects of value Rs. 250 million. Included in these were a project by Bajaj Auto Ltd. to manufacture three wheelers and one by Kirloskars to manufacture diesel engines.

Ventures in Africa

In the African continent, Nigeria, Algeria, Libya, Kenya, Tanzania, Ghana and Zambia are promising for Indian tie-ups. Oil-rich Nigeria is a country with which India has had fairly close economic and commercial relations. Authorities in both countries have realised the scope for still more closer economic ties. This potential has not been tapped to any marked extent by India yet. The Indian businessman in Nigeria have earned a lot of goodwill lately and this could be banked upon. Several prized contracts have been secured in Nigeria by Indian companies recently, largely due to the good work done by the Indian Railways there. Our railway men, by helping to systematise the working of the virtually defunct rail transport system there, have projected a healthy image of our country. One of the recent projects bagged by India is by WAPCOS (The Water and Power Development Consultancy) for a drinking water supply system in Nigeria. HMTI (Hindustan Machine Tools International) has been selected as a collaborator for a machine tool complex in Nigeria. The Birlas who have already established a paper cum pulp complex at Jebba, Nigeria, have been appointed consultants for another such complex near Lagos.

Algeria too has agreed to collaborate with India in joint ventures in a big way. Through a memorandum signed on February 15, 1980 India has agreed to establish industrial units in Algeria for the manufacture of cement, paper, drugs and pharmaceuticals, time-pieces, handicrafts, textiles, hoisery and synthetic fibres. Algeria has also turned to India for conducting railway feasibility studies, construction of an underground railway line, modernisation of existing rail network, remodelling of marshalling yards, and providing technical personnel for operation and management of the Algerian Railways.

Kenya also has welcomed Indian participation in its industrial development. Kenya has invited joint venture proposals for the setting up of mini-cement, mini-paper, power alcohol and transformer plants. The Kenyan Industrial Estate has stipulated that the proposals be less than Rs. 5.4 million. The Projects and Equipments Corporation, has accepted Kenya's invitation and will be setting up a mini-sugar plant there with a crushing capacity of 200 tonnes per day.

Libya, in North Africa is another fertile ground for Indian joint ventures. The biggest turnkey power project ever undertaken abroad by India was successfully commissioned in Tripoli, Libya in early 1980. This 120 M.W. thermal project was set up by BHEL at a cost of Rs. 1,000 million. The Building Constructions Corporation already executing seven works in Libya contracted for Rs. 2,232 million, has signed a protocol to build a township there at an estimated cost of Rs. 400 million in March 1980. The Indian Roads Construction Corporation has also been offered a Libyan Road contract for Rs. 190 million in February, 1981.

Ventures with Developed Countries

Besides ventures with countries of the Third World we also have ventures with the developed nations. These ventures have mostly taken the form of joint bids with western countries for the execution of turnkey projects and other ventures in third countries. One specific reason for western countries joining hands with India appears to be the shortage of skilled personnel and managerial talent besides certain type of equipment, all of which India is in a position to provide. Third country joint ventures have been successful in certain fields where certain amount of machinery and/or sophisticated know-how is required for the execution of the projects. Indian companies have been able to forge alliance with some well-known western companies like G.E.C. of U.K., Kaiser Engineering, Brown and Caldwell, and Envirotech all of the USA, Alusuisse of Switzerland and Tungsram of Hungary.

Other than joint bids, joint ventures have also been established by India in the participating developed countries. But these projects are mostly concentrated in service ventures like hotels, restaurants and food processing, though a few deviations have been made recently. A few joint ventures have been entered into for producing oil engines, and rice milling machines in West Germany, polythelene products in the USA, steel wire ropes in Yugoslavia and bicycle tyres and tubes in Canada.

High Mortality

Hidden behind the facade of our successful joint ventures is a high mortality. The mortality rate is quite high—as high as 48 per cent. Out of 399 joint ventures approved till March, 1981 almost half (195) had been abandoned, some of them even after the plants were put up. The number of drop-outs rose to 245 by mid 1982.

The reasons for such a high failure are several, like nationalisation in the case of Ethiopia and political problems as in Uganda. But such instances are few and far between. The major reason appears to be protection from imports in the participating country. Some joint ventures in Indonesia have been in precarious existence as the Government has not been able to restrict imports. As many as 13 projects in Sri Lanka had to be abandoned over the years due to liberalisation of its restrictive import policy. Only four ventures in that country have survived. Sometimes smuggling of competitive products has added to the misery of Indian ventures. Also, in a few cases, Indian entrepreneurs have not done their home work—pre-investment calculations regarding market prospects, cost etc. properly, which has resulted in abandonment of their ventures.

Contribution of Joint Ventures

The contribution of our joint ventures by way of know-how fees and dividends has not been very significant in view of the fact that most of our joint ventures began production only after 1973. The total earnings from these two sources totalled no more than Rs. 14.4 crores by March 1980 inclusive of dividends amounting to Rs. 3.61 crores. But, industry cannot be blamed for such a low level of remittance, since equity participation in joint ventures abroad was discouraged as a matter of policy until recently.

In spite of low earnings, these joint ventures have been able to generate exports of capital equipment, semi-finished products and raw materials to the extent of Rs. 115 crores till June 1982. Eighty-five joint ventures set up abroad by the Indian private sector brought repatriated earnings to the tune of Rs. 11.86 crores upto the end of 1981. The repatriation dividends, know-how fees, service charges etc., earned by these companies formed 29.8 per cent of their equity participation. The totality of efforts in joint ventures, continues to be small when judged by the volume of foreign exchange they fetch for India.

With increasing experience gained over the years in the field of joint ventures and more and more projects getting into stream, the earnings by way of know-how fees, dividends and capital goods exports is bound to increase in the years to come. The growth potential in joint venture is unlimited and it is hoped India would be able to tap this potential to the fullest extent.

INVESTMENT BY NON-RESIDENTS OF INDIAN ORIGIN

The Government of India offers considerable facilities to non-residents of Indian origin to invest in India. Indian citizens who stay abroad for employment or for carrying on business or vocation outside India, or for any other purpose involving an indefinite period of stay abroad are considered to be non-resident Indians. Also, Indians who have made their permanent homes outside India and acquired foreign citizenship, as well as descendants of Indians who had earlier migrated from undivided India are considered as persons of Indian origin. A foreign born wife of Indian citizen or a person of Indian origin is also treated as a person of Indian origin. All investments by non-resident Indians require the prior approval of the Government of India and/or the Reserve Bank of India. Such investments would be of various categories.

Investments with Right of Repatriation

I. *Direct Investment :* Non-residents of Indian nationality or origin can invest in new issues of any new or existing companies which raise capital through public issues by means of a prospectus, upto 40% of the new capital issues. They cannot however invest in companies in which non-resident interest is already more than 40%. They can also invest with full repatriation benefits in the capital raised by private limited and public limited companies otherwise than through a prospectus upto 40% of the new issue subject to a ceiling of Rs. 4 million.

A. The scheme is applicable to all industries including hotel industry; these investments can be made for setting up new projects or for expansion/diversification of existing undertakings. Applications for necessary approval for issue of shares to Non-resident Indians under the 40% scheme should be made to the Controller, Exchange Control Department in Reserve Bank of India's Foreign Investment Division.

B. Non-residents of Indian origin/nationality can invest upto 74 per cent of the equity capital of a company in any industry listed in Appendix-I to the Ministry of Industry Press Note dated 2-2-1973 as amended on 21-4-1982. Such investments can now be made in hotel industry also. Investments under this scheme will also be allowed in any industry if the investor undertakes to export 60 per cent of the output or 75 per cent of the output in case of industries reserved for small sector. Import of capital equipment etc., is permissible to the extent of foreign exchange brought in by the Non-resident Indians. Application for this scheme should be made in Form FC to the Secretariat for Industrial Approvals, Department of Industrial Development, Ministry of Industry. After securing Government approval, application must be made to the Reserve Bank of India for formal permission to issue shares to non-residents. Investment in a partnership firm is also within the ambit of this scheme.

II. *Portfolio Investment :* Non-residents of Indian nationality/origin are permitted to make portfolio investment in India with full benefits of repatriation of capital and income. The conditions to be fulfilled are : (i) shares must be purchased through a stock exchange ; (ii) purchase of shares in any one company by each non-resident investor should not exceed one per cent of the paid-up equity capital of the company ; (iii) payment for such investment should be made either by fresh investments from abroad or out of the funds held in the investor's Non-Resident (external) Account/FCNR Account with a bank in India. Also an overall limit of 5 per cent has been specified on the holdings allowed to non-residents in existing companies bought through stock exchanges with or without benefits of repatriation. Holdings beyond this limit would require the prior approval of the Reserve Bank of India.

The Reserve Bank of India permits authorised dealers in foreign exchange to purchase shares through stock exchanges on behalf of their non-resident customers.

Investments without Rights of Repatriation

I. *Direct Investment :* Non-residents of Indian nationality/origin are permitted to subscribe freely to new issues of any public or private company engaged in any business activity other than real estate business, provided they undertake not to seek at any time repatriation of capital or income. Such investments may even go upto 100 per cent of the issued capital of a company.

Investment under this scheme would require permission from the Reserve Bank of India. Indian companies proposing to issue shares to non-residents should apply to Reserve Bank of India in form ISD together with a non-repatriation undertaking from each such non-resident in the prescribed form.

II. Portfolio Investment : Investment in shares through recognised stock exchanges by non-residents is permitted, subject to some specific conditions. Payments for these may be made either through remittances from abroad or from Non-resident (External) Account, FCNR Account or Ordinary Non-resident Account. Each transaction does not require specific approval ; the Reserve Bank of India grants permission to the investor's bankers, authorised to deal in foreign exchange in India. Application for permission for such purchase of shares should be sent in Form NRI to the Office of the Reserve Bank of India, within whose jurisdiction the designated bank is situated.

Investment by Overseas Companies

All the facilities of direct and portfolio investments available to non-resident Indians have been extended to overseas companies, partnership firms, trusts, registered societies and other corporate bodies owned predominantly by non-resident individuals of Indian nationality/origin-(i.e. atleast 60 per cent of the ownership of such concern should vest with non-resident Indians).

Applications from such organisations for permission to designate bankers for purchasing shares through stock exchanges on non-repatriation basis may be made in Form NRC to the concerned Office of the Reserve Bank of India. Applications for investments with repatriation benefits should be made in Form RPC to the Controller, Exchange Control Department in the Foreign Exchange Division of Reserve Bank of India. Applications for issue of shares to non-residents should be made by the Indian company in Form ISD to the regional office of the Reserve Bank of India in cases of shares on non-repatriation basis and to its central office in case of investments with repatriation rights.

Retention of Foreign Currency Balances

Persons who wish to transfer their residence to India may, if they so desire, apply to the Reserve Bank of India for permission to retain foreign currency balances abroad. Application should be made in the prescribed form within three months from the date of their return to India.

The Special Approval Committee (NRI) was constituted in 1983. Since then, uptill the end of March 1985, sixty-six letters of intent/permissions/industrial licences have been issued to non-residents of Indian origin to start industrial units in the country. The break-up of these approvals is as follows : Nov.-Dec. 1983—6 ; 1984—39 ; Jan.-Mar. 1985—21.

Among the various industrial goods for which investments by the NRIs have been sought, top preference appears to be for telecommunication equipment including TV accessories. Thirteen of the units so far approved, are for the manufacture of TV accessories, audio/video cassettes. Eight of the investments are for setting up plant to manufacture telephone instruments. Two non-resident Indians have been permitted to set up mini-computer/microprocessor based systems. Six NRIs have been accorded approvals for manufacturing drugs and medical equipment. Other areas where investments have been approved are, thermoplastics and other plastic goods, alloy steel products, cotton, synthetic yarn, fabrics and watch straps. A plant for manufacturing newsprint and paper to come up in Cuttack seems to be the most capital-intensive item sanctioned so far in this category. Other items favoured by NRI are detergent powders, electronic typewriters, white cement, aluminium laminates, circuit boards, paper copiers, storage batteries, fluorescent tubes, Ceramic tiles etc.

Statewise, Andhra Pradesh and Gujarat have bagged the highest number of approved investments by non-residents so far, each accounting for nine such investments. Eight of the proposed plants will be located in Maharashtra, Haryana and Uttar Pradesh ; six will be in Tamil Nadu, three each in Madhya Pradesh, Karnataka and Delhi and two each in Himachal Pradesh and Dadra and Nagar Haveli. In each of the states of Orissa, Punjab, Rajasthan, Jammu & Kashmir and Goa, Diu & Daman, one NRI Investment has been approved so far.

Of the sixty-six non-resident Indian investments approved by the government, 54 are from individuals and 12 are from firms and companies. The firms/companies permitted investment as non-residents are : Madras Hydraulic Hose Pvt. Ltd., Mabelec, France, Binatone Electronics Pvt. Ltd., Thadani Holdings Pvt. Ltd., Mepco Metal Powder Ltd., Indo-US Investment Inc., Kody Elect Ltd., Vimpex Investment Ltd., Manufacturing Technologies Inc., USA, and Fusion Polymers Ltd. Of these, Binatone Electronics Pvt. Ltd., has been permitted investment for setting up of two plants for producing video display monitor and telephone instruments.

NEW GOVERNMENT GUIDELINES

On Public Issues

The cost of raising capital has been growing rather steeply in the recent past. In their attempt to lure prospective investors to subscribe to their issues, Indian companies have had to face substantial spending on share issues. And in the case of new companies, such initial cost of share issue has worked out to a significant percentage of their capital base.

Taking all this into account, when the government appointed a high powered committee to review the working of the stock exchanges, it included in its terms of reference, the measures required to minimise the cost of public issues.

This committee, headed by Mr. G. S. Patel submitted its recommendations to the government. In the light of these recommendations, the government announced a series of decisions in a communication dated May 7, 1985, addressed to all stock exchanges in the country and directing them to implement these with immediate effect to bring down the prevailing high cost of public issues. These guidelines are applicable to all companies which are yet to receive consent of the Controller of Capital Issues or companies whose shares are to be listed in the stock exchanges on or after 7th May, 1985.

The maximum limit fixed for non-mandatory cost in respect of equity and convertible debentures is at 5 per cent of the total cost and in case of non-convertible debentures, 2 per cent of their cost, upto an issue limit of Rs. 5 crores.

If the issue is in excess of Rs. 5 crores, the limit is fixed at 2 per cent on equity and convertible debentures, and at 1 per cent in respect of non-convertible debentures.

The mandatory cost will include underwriting commission, brokerage, fees for managers to the issue, press announcements and listing fees.

Overall costs

The government has fixed the overall costs on the amount of expenditure on public issues as under.

In respect of equity and convertible debentures :
- Upto Rs. 5 crores : Mandatory costs + 5 per cent for other costs.
- Above Rs. 5 crores : Mandatory costs + 2 per cent for other costs.

In respect of non-convertible debentures :
- Upto Rs. 5 crores : Mandatory costs + 2 per cent for other costs.
- Above Rs. 5 crores : Mandatory costs + 1 per cent for other costs.

'Other costs' will cover (*a*) costs of stationery and printing of share certificates, refund orders and allotment letters ; (*b*) printing costs of application forms, brochures and prospectus ; (*c*) mailing costs, (*d*) bank charges and out-of-pocket expenses, (*e*) computer usage costs, (*f*) fees payable to the registrar/managers to the issue and miscellaneous expenses towards legal charges, telephone, telex, conveyance and other administrative expenses.

The government has now refixed the underwriting commission, brokerage and managing brokers' remuneration payable by a company. The number of application forms and prospectus to be supplied free to brokers, underwriters, managers to the issues and stock exchanges has also been fixed. The criteria for determining the centres for acceptance of application and call monies and the minimum subscription /allotment limit have been freshly laid down.

The government has now permitted the companies to adjust the excess application money and limit the number of calls to the barest minimum. The government circular also says that hereafter the basis of allotment need not be intimated to the applicant. The government has also imposed an obligation on the company's auditors to state in their reports if the concerned company has incurred any expenditure above the overall limit fixed by the government for a public issue. The consent letters issued by the CCI would contain a specific condition relating to the maximum limit for expenditure permissible for raising the capital. Any breach or non-compliance of the above conditions will attract penal provisions under the Capital Issues Control Act.

Similarly, adherence to the ceiling limit on expenditure fixed by the government will be condition precedent for the grant of listing of securities in the stock exchanges for new companies and for continued listing in the case of existing listed companies.

Underwriting Commission

Underwriting commission shall be payable on the following basis :

Type of Security	On amount subscribed by public (%)	On amount devolving on underwriters (%)
A. Equity shares	2.5	2.5
B. Preference shares, Convertible/Non-convertible debentures :		
(i) upto Rs. 5 lakhs	1.5	2.5
(ii) In excess of Rs. 5 lakhs	1	2

These limits indicated above are the maximum permissible and companies are free to negotiate with underwriters and reduce these percentages, if found feasible.

Brokerage

A standard brokerage of 1.5 per cent has been fixed for all industrial securities against the existing statutory ceiling of 1.25 per cent. But this rate would now cover all mailing and other out-of-pocket expenses incurred by brokers for canvasing the public issue. Brokers, therefore, will be precluded from claiming reimbursement of these expenses from companies. A clause to this effect has to be incorporated in the standard agreement to be entered into between the company and the brokers. If a company, whose shares are already listed makes an arrangement for private placement of capital, it can pay a brokerage at a maximum rate of half per cent. Brokers will not be eligible for brokerage on amounts taken by promoters, directors, employees and their friends and in respect of shares taken up or renounced by existing shareholders in case of rights issues.

A condition has been stipulated that institutions and banks shall not get any brokerage on amounts underwritten or on amounts devolving on them consequent on under-subscription of issues. Appointment of official brokers is not compulsory ; it is at the discretion of the company to appoint any agency to provide pre-and post issue services.

While the companies are free to choose one or more agencies to act as managers to the issue, the overall fees payable to all of them should not exceed half per cent for issues upto Rs. 5 crores and 0.2 per cent in case the issue exceeds Rs. 5 crores. Managers to the issue cannot claim fees in respect of amounts agreed to be taken by the financial institutions and amounts devolving on financial institutions/underwriters, on amounts taken up by the promoters, directors, employees, their friends and business associates and on amounts subscribed on rights basis. Also managers need not be paid fees on shares and debentures, subscribed by the company's existing deposit/debenture holders being given preferential allotment in as much as the companies will not be receiving any special service from managers in respect of these.

Apart from the free supply of application forms and prospectus to brokers, underwriters and managers, companies are allowed to supply additional copies of (*a*) application forms at actual cost or 25 paise whichever is lower and (*b*) prospectus at Re. 1 a copy.

Centres for acceptance of Application Forms/Call Monies

The government has fixed the centres for acceptance of application forms and call-monies in two broad categories : (A) Issues up to Rs. 5 crores—all recognised stock exchange centres as well as other prescribed centres in the states and centres in the states where the nearest major stock exchanges are situated. (B) Issues above Rs. 5 crores—all recognised stock exchange centres and all centres prescribed by the government.

Minimum Subscription/Allotment

The minimum limits for application and allotment have been fixed thus : Shares (equity and preference) : 100 shares of Rs. 10 each or 10 shares of Rs. 100 each. Debentures (convertible and non-convertible) : 10 debentures of Rs. 100 each.

Adjustment of Excess Application Money

The companies now have the option either to call 50 per cent of the issue price or 100 per cent of the issue price at their discretion. In the interest of small investors and to save enormous refund work, big companies and FERA companies should call for only 50 per cent of issue price initially. It is also suggested that a company should issue the share certificates straight away at the time of allotment after adjusting the excess application money. This would give considerable cost saving in bank service charges and out-of-pocket expenses recoverable from the company and saving in computer time and stationery because of the elimination of allotment letters.

Hereafter the basis of allotment of the issue need not be intimated to the applicants ; it would suffice if these details are published in a widely circulated newspaper.

CUMULATIVE CONVERTIBLE PREFERENCE SHARES

Government of India has sanctioned the issue of a new class of shares viz., Cumulative Convertible Preference (CCP) shares. Government has issued a set of guidelines for the guidance of companies proposing to issue these shares. These guidelines are applicable to the issue of cumulative convertible preference shares by public limited companies which propose to raise finance.

Objects : The objects of the issue of the above instrument should be any of the following : setting up of new projects ; expansion or diversification of existing projects ; normal capital expenditure for modernisation ; working capital requirements.

Quantum : The amount of CCP shares can be equivalent to the size of the equity capital the company would be offering to the public for subscription. In case of projects assisted by financial institutions, the quantum of issue must be approved by these institutions/banks. The applicant company should submit to the controller of capital issues a realistic estimate of the project costs along with letters indicating approval/participation of the public financial institutions.

Terms

(*a*) This instrument would be deemed to be equity for the purpose of calculating debt-equity ratio.

(*b*) The entire issue of CCP would be convertible into equity shares between the end of three and five years, as decided by the company and approved by the CCI.

(*c*) The conversion would be deemed as being one resulting from the process of redemption of the preference shares out of the proceeds of a fresh issue.

(*d*) The rate of dividend payable would be 10 per cent.

(*e*) The guidelines in respect of issue of preference shares for ratio requirement of 1 : 3 as between preference and equity would not be applicable to the new instrument.

(*f*) On conversion of preference into equity, the right to receive arrears of dividend, if any, on the preference shares upto the date of conversion shall devolve on the holder of the equity shares on such conversion.

(*g*) These preference shares would have voting rights, as applicable to preference shares under the Companies Act 1956.

(*h*) The conversion of these shares would be compulsory at the end of 5 years ; these shares would not be redeemable at any stage.

(*i*) The face value of these shares will normally be Rs. 100 each. The instrument may be listed on one or more stock exchanges in the country.

The Articles of Association of the applicant company should contain a provision for the issue of CCP. Further the company should submit with the application to the Controller of Capital Issues a certified copy of a special resolution in this regard under Section 81 (A) of the Companies Act 1956, duly passed in a general meeting of the company. This resolution should have specifically approved the issue of the CCP shares and provide for compulsory conversion of the preference shares between the 3rd and 5th year.

Legal requirements : All applications should be sent to the Controller of Capital Issues, in the prescribed form duly accompanied by the requisite fees.

The applications should be accompanied by a true copy of the letter of intent/industrial licence whichever is necessary, or registration with the Directorate General of Technical Development for the project.

In respect of companies registered under the MRTP, documentary evidence of the appproval under the MRTP Act should be furnished along with the application. Certificates from the company's Auditors and from a Director/Secretary that the information given is correct and complete, should also accompany the application.

Features and benefits : CCP shares enhance the scope for companies to go in for larger magnitude. Whereas in the case of conventional preference shares, the ratio of such shares to equity could be only 1 : 3, CCP shares may be issued equivalent to the size of the equity capital.

It is felt that CCPs may prove more popular than convertible debentures, despite the lower rate of interest, because of the tax incentives. Since CCP shares are deemed as equity from the date of issue, dividend on them is likely to be exempted from tax under Section 80 (L) of the Income Tax Act. The interest on CCP shares woud also be exempted from tax upto a ceiling of Rs. 7,000 while interest on debentures is fully taxable.

The companies, for their part, may also show a preference for CCPs rather than Cumulative Debentures in view of the lower tax rates. More importantly, being deemed as equity for the calculation of debt equity ratio, the companies would be enabled to borrow larger funds because of the expanded equity base. CCPs could be of particular advantage to companies undertaking large capital expenditue and long gestation projects like cement and fertilizers. By utilising CCPs, these companies can refrain from creating large equity capital right from the beginning which often proves detrimental to the viability of the project. CCPs could be converted into equity after 5 years, by which time, the project would have stabilised and started yielding returns. CCP also offers new companies the facility of deferred interest liability. At present new companies are unable to offer bonds/debentures with such facility since they do not have assets to offer as security.

TAX INCENTIVES

Tax incentives play a vital role in stimulating industrial growth by encouraging the setting up of new industries, expansion or diversification of existing ones through fresh investments and, increasing production by fuller utilisation of installed capacity. The incentives are allowed as direct deductions while computing the profits and gains of business or as tax holiday concessions against the profits earned by the tax payer.

The Indian tax laws are primarily aimed at achieving the goal of increased savings and investment by offering a wide range of incentives. The other desired objectives aimed at are : accelerated scientific research and technological development, augmentation of foreign exchange resources by encouraging foreign investments in India and broadening of the industrial base in the co-operative and small-scale sector particularly in the rural and backward areas. Some of the major tax incentives which are of special interest to various categories of assessees are outlined as follows :

(A) *Incentives for investment relating to business or profession :*

1. Depreciation allowance.
2. Additional depreciation allowance.
3. Investment allowance.
4. Deduction of expenditure on scientific research.
5. Amortisation of cost of patent rights and copyrights.
6. Allowance for rural development.
7. Agricultural development allowance.
8. Development allowance for tea industry.
9. Export markets development allowance
10. Amortisation of preliminary expenses.
11. Amortisation of expenditure on prospecting for and development of specified minerals.
12. Carry-forward and set off of accumulated business loss and carry-forward of unabsorbed depreciation in certain cases of amalgamation.

(B) *Tax holiday for new industrial under taking :*

1. New Tax holiday.
2. Tax concession for a new industrial undertaking or hotel set up in specified backward areas.
3. Tax concession for small scale industrial undertaking set up in rural areas.
4. Concessional treatment of inter-corporate dividends.
5. Exemption of income from provision of technical know-how or technical services.
6. Special deduction for Indian companies on income from provision of technical know-how and technical service to foreign enterprise.
7. Incentive for incremental addition of export turnover.
8. Tax concession on profits from foreign contracts.
9. Tax concession for book publishing industry.

(C) *Complete tax holiday for initial five years for industrial units situated in free trade zones*

D) *Miscellaneous incentives:*

1. Exemption of interest on new capital investment bonds.
2. Exemption of income from specified assets.
3. Deductions in respect of long-term savings.
4. Deduction of investment in equity shares of new industrial company.
5. Tax concession in respect of income derived from livestock, breeding, poultry or dairy farming.
6. Tax concession for growing mushrooms.
7. Deduction of payment for securing retirement annuities.
8. Deduction of donations.
9. Deduction of expenditure incurred by companies for promoting family planning amongst employees.
10. Exemption of remuneration of Indians from foreign educational institutions.
11. Deduction of remuneration from foreign employers.
12. Deduction of remuneration received by Indian technicians, etc. in foreign currency from Indian concerns for rendering services outside India.
13. Exemption of professional foreign income of Indian authors, playwrights, musicians and actors.
14. Deduction of payments to any association or institution engaged in rural development.
15. Tax concession to authors of textbooks of University level in Indian languages.
16. Deduction of medical expenses of handicapped dependents.
17. Deduction of long term capital gains for non-corporate taxpayers.
18. Deduction of payments to association/institution carrying out programmes of conservation of natural resources and environmental preservation.
19. Tax credit certificate.

(E) *Special incentives for foreign/non-resident tax-payers:*

1. Exemption of interest income from specified saving certificate.
2. Exemption of interest on deposits in a non-resident account in India.
3. Exemption of dividend income from units of Unit Trust of India, subscribed by non-residents.
4. Concessional tax on income from foreign exchange assets of a non-resident and Indian citizen.
5. Concessional tax on capital gains arising on transfer of foreign exchange asset.
6. Concessional tax on royalties and technical service fees received by a foreign company.
7. Exemption from surtax in the case of foreign companies in respect of income from royalties, interest and technical service fees.
8. Tax exemption to foreign technicians.
9. Tax-free interest on loans.
10. Deduction in respect of educational expenses of children of foreigners.
11. Exemption of leave passages.
12. Exemption to foreign employees temporarily in India serving a foreign enterprise.
13. Exemption of remuneration received by foreign trainees in Government establishments etc.

(F) *Important Wealth-tax exemptions:*

1. Five year 'Wealth-tax holiday' for equity shares in new industrial companies.
2. Wealth-tax exemption for share holdings in Indian companies and in other, specified investments upto Rs. 1,50,000.
3. Exemption of assets brought into India by persons of Indian origin.
4. Exemption of investment by non-resident Indian citizen in equity shares in priority industries.
5. Exemption of foreign exchange assets of non-resident Indian citizen.

FACILITIES AND INCENTIVES FOR INDUSTRIAL PROMOTION IN INDIA

In a country of our size, with wide variations in physical conditions and levels of development, motivating and encouraging planned industrial development is a highly complex task. The rapid pace of industrial growth and the development of productive capacity has been marked by remarkable though, still inadequate expansion of infrastructural facilities in the country. In addition to the development of infrastructure, various facilities and incentives have to be offered by the Government for accelerating industrial growth and achieving balanced regional development. Efforts in these directions have continued since the advent of planning and today, this is being intensified vigorously by both the Central and State Governments.

Besides the various incentives and facilities offered by different State Governments and the Union Territory Administrations, the Central Government has been contributing, on its own, to the removal of regional imbalances in development through location of central projects in the backward areas and assistance to the State Governments by way of allocation of central assistance. More specific measures for promotion of industries in the backward areas were initiated during the Fourth Five-Year Plan.

The initial steps towards backward area development were taken after the Pande Committee submitted its report in 1969, recommending the declaration of backward states and districts. Similarly the Wanchoo Committee recommended various types of incentives and subsidies for industries in notified backward districts/areas. In 1971, the centre notified 217 districts as backward, and the number was subsequently raised to 262. With effect from April, 1, 1983, the backward districts have been reclassified and graded incentives reintroduced.

According to the new scheme of incentives, industries in Category 'A' districts are eligible for 25 per cent fixed investment subject to a maximum of Rs. 25 lakhs as central investment subsidy. Central subsidies are at the rate 15 per cent (or Rs. 15 lakhs) and 10 per cent (Rs. 10 lakhs) in 'B' and 'C' category districts, Entrepreneurs setting up industries in the 'no-industry' districts, included in category 'A' of the backward areas are given overriding priority in the grant of industrial licences, highest priority of central investment subsidy, concessional finance facilities from all-India term lending institutions, tax concessions, hire purchase of machinery by small-scale industries, consultancy for technical services, interest subsidy, seed or margin money assistance comprehensive range of extension services and support through district industries centre. The Central Goverment also provides assistance for development of infrastructural facilities in identified growth centres in 'no-industry' districts to the extent of one-third of the total cost subject to a ceiling of Rs. 2 crores per district. The Central Government also grants transport subsidy in certain selected areas. A brief description of the facilities and incentives offered by the Central Government and National Financial Institutions are given below :

I. SCHEME OF CONCESSIONAL ASSISTANCE FOR DEVELOPMENT OF NO-INDUSTRY DISTRICTS AND OTHER BACKWARD AREAS

The Government of India has identified 299 districts as Specified Backward Areas (SBAs) and classified them into 'A', 'B' and 'C' categories depending upon the degree of backwardness. 'A' category district, 131 in all, include 90 'No-Industry Districts' (NIDs) which have no medium or large-scale industrial units. Government also announced further incentives/concessions to entrepreneurs for setting up industrial units in SBAs, brief details of which are given in Appendix I. State-wise list of SBA is furnished in Appendix II.

In order to accelerate the pace of industrialisation in SBAs, especially in NIDs, IDBI along with IFCI and ICICI has formulated a comprehensive scheme of concessional assistance and other incentives for the setting up of units in such areas. Under the new scheme, the policy thrust is on providing graded-scale of incentives to attract investment in NIDs and other relatively more backward regions. Salient features of the new scheme, introduced with effect from April 1, 1983, are given in the following sections, separately for NIDs and other backward areas.

Concessions to Projects in Category 'A' Districts (No-Industry and Special Region Districts) :

A. Direct Assistance

(*a*) *Eligibility for concessional assistance*

All new viable projects conforming to national priorities are eligible for assistance on concessional terms.

(*b*) *Amount of concessional assistance*

Hitherto, institutions were providing assistance on concessional terms to new units including those set up by existing companies in backward areas subject to a ceiling of Rs. 2 crores on loans and Rs. 1 crore on underwriting assistance ; the balance assistance was on normal terms. The ceilings for concessional assistance have now been raised to Rs. 5 crores for loan assistance and Rs. 2.5 crores for underwriting assistance.

(*c*) *Interest and underwriting commission*

Interest : 12.5 per cent p.a. on concessional portion of loan ; balance at the normal lending rate of insitutions (current rate 14 per cent p.a.).

Underwriting commission :

Shares : 1.5 per cent on concessional portion of shares.

Debentures : 1.25 per cent on amount devolving on underwriters and 0.75 per cent on amount subscribed by public in respect of concessional portion ; balance at 2.5 per cent and 1.5 per cent respectively.

(*d*) *Promoters' contribution*

The norm for minimum promoters' contribution has been reduced from 17.5 per cent to 15 per cent of project cost. Besides, for calculating promoters' contribution, expenditure on project-specific infrastructure development (referred to in sub-paragraph (h) below) will be excluded from the project cost.

Further, in the case of large projects involving capital cost exceeding Rs. 25 crores, particularly in high priority sectors listed in Appendix I to the Industrial Policy Statement issued by the Government of India on February 2, 1973, and sponsored by non-MRTP companies, the promoters contribution may be further reduced, if necessary, to 10 per cent of the cost of new projects.

(*e*) *Debt-Equity ratio*

More flexible approach would be adopted with regard to debt-equity ratio which could be suitably relaxed in deserving cases keeping in view the debt servicing capacity of the unit. Direct subscription to equity would also be considered provided the promoters also bring in their full matching contribution.

(*f*) *Commitment charge*

No commitment charge will be levied on the undrawn portion of rupee loan.

(*g*) *Convertibility option*

All loans will be totally exempt from convertibility option.

(*h*) *Assistance for project-specific infrastructure development*

For the first time, interest-free loan will be provided for development of project-specific infrastructure to new projects, during the construction period. This assistance, limited to 20 per cent of project cost, will carry interest at the concessional rate of 12.5 per cent up to Rs. 5 crores and the balance amount at the normal lending rate of institutions (currently 14 per cent), after the project goes into production. Infrastructure for this purpose would include approach road, railway siding, minimum housing facilities, laying of power lines and water pipes, captive power plant (not in the nature of standby arrangement) and such other items of development expenditure for infrastructure as may be considered necessary for the project. The concessional assistance for project-specific infrastructure would be over and above the limit for concessional project finance as indicated in (b) above.

(*i*) *Assistance for area-specific infrastructure development*

Recognising that the development of infrastructure is an essential pre-requisite for industrialisation, especially in NIDs, assistance will be provided for the first time to finance area-specific infrastructure development for creation of necessary infrastructure facilities. Financial assistance for the purpose will be provided to State Industrial Development Corporation (or any other Corporation set up to take up infrastructure development) by way of term loans up to Rs. 5 crores per NID to meet the cost of area-specific infrastructure development over and above the special financial assistance (Rs. 6 crores) from the Central (Rs. 2 crores) and State Governments (Rs. 4 crores) available under the package of incentives announced by the Central Government in April 1983.

(*j*) *Assistance for Industrial estates*

IDBI will extend direct assistance for financing industrial estates costing more than Rs. 3 crores per project. Concurrently, industrial estates costing up to Rs. 3 crores will continue to be financed under its Refinance Scheme.

B. Incentives for Small and Medium Enterprises

(*a*) *Limit on refinance*

To encourage development of small and medium enterprises, IDBI will provide 100 per cent refinance to State Financial Corporations (SFCs) and State Industrial Development Corporations (SIDs) against their loans to projects in 'A' category districts. The ceiling on the project cost eligible for refinance has been raised from Rs. 2 crores to Rs. 3 crores. Similarly, the ceiling on loans eligible for refinance has also been raised from Rs. 140 lakhs to Rs. 200 lakhs (SFC—Rs. 30 lakhs, SIDC—Rs. 90 lakhs and banks—Rs. 80 lakhs) per project.

(*b*) *Interest*	*SFCs/SIDCs*	*Banks*
Loan	12.5%	12.5%
Refinance	9.0%	8.5%

(*c*) *Commitment charge*

No Commitment charge will be levied on the undrawn portion of refinance provided, no such charge is levied by the primary lenders.

(*d*) *Promoters' contribution*

As a further measure of incentive to such enterprises, the promoters' contribution has been reduced from 17.5 per cent to 10 per cent of the project cost. Besides, for calculating promoters' contribution, expenditure on project-specific infrastructure will be excluded from the project cost.

(*e*) *Assistance for project-specific infrastructure development*

Interest-free loan will be provided for development of project-specific infrastructure under the refinance scheme as in the case of direct project assistance by IDBI in respect of new medium scale projects costing up to Rs. 3 crores. Such ssistance, limited to 20 per cent of the project ost, will carry interest at the concessional rate of 12.5 per cent p.a. after the project goes into production.

C. Effective Date

All the above concessions will be available retrospectively from April 1, 1983 and will remain in orce till March 31, 1986. No change in the inancing pattern will, however, be considered or projects already sanctioned (by the lead institutions) between April and October 1983.

Concessions to Projects in 'B' and 'C' Category Districts

A. Direct Assistance

a) Eligibility for concessional assistance

All new viable projects conforming to national priorities are eligible for assistance on concessional terms.

b) Amount of concessional assistance

The ceilings for concessional assistance are s under :

Category	*Amount of assistance (Rs. Crores)*	
	Loan	Underwriting
B	3.0	1.5
C	2.0	1.0

c) Interest and Underwriting Commission

Interest : 12.5 per cent p.a. on concessional portion of loan ; balance at the normal lending rate of the institutions (current rate 14 per cent p.a.)

Underwriting commission :

Shares : 1.5 per cent on concessional portion of shares underwritten and on balance, 3 per cent.

Debentures : 1.25 per cent on amount develoving on underwriters and 0.75 per cent on amount subscribed by public in respect of concessional portion ; balance at 2.5 per cent and 1.5 per cent respectively.

(*d*) *Promoters' contribution*

Category of districts	*Minimum contribution (% of project cost)*
B	15
C	17.5

(*e*) *Commitment charge*

Commitment charge will be levied on the undrawn portion of the loan amount bearing concessional rate of interest, at half the normal rate- on the balance, commitment charge will be levied at the normal rate i.e. '*Nil*' up to 180 days from the date of Letter of Intent or up to date of signing of the loan agreement, whichever is earlier ; 1 per cent p.a. for a period of 365 days thereafter and ½ per cent p.a. after the expiry of the aforesaid period of 365 days.

The above concessions will be available in respect of sanctions accorded between April 1, 1983 and March 31st 1986. No change in the financing pattern will, however, be considered for drojects already sanctioned (by the lead institutions) between April and October, 1983.

B. Small and Medium Enterprises

(*a*) Refinance at concessional terms will be provided by IDBI to SFCs, SIDCs and eligible banks against their term loans to small and medium projects in 'B' & 'C' category districts. The ceiling on project cost eligible for refinance has been raised from Rs. 2 crores to Rs. 3 crores in respect of new as well as expansion, diversification and modernisation projects. Similarly, the ceiling on term loans eligible for refinance from IDBI has been enhanced from Rs. 140 lakhs to Rs. 200 lakhs per project.

(*b*) *Interest*		*SFCs/SIDCs*	*Banks*
Loan	..	12.5%	12.5%
Refinance	..	9.0%	8.5%

(*c*) *Commitment charge*

Small Sector : (i) No charge on sanctions under Automatic Refinance Scheme.

(ii) In other cases :
First 12 months—Nil.
Thereafter —½% p.a.

Medium Sector : First 6 months*—Nil.
Thereafter —½% p.a.

*(will be reduced to 3 months, if loan disbursed prior to sanction of refinance).

(*d*) *Promoters' contribution*

Category of districts	*Minimum contribution (% of project cost)*
B	15
C	17.5

APPENDIX I

INCENTIVES FOR SETTING UP INDUSTRIES IN NO-INDUSTRY DISTRICTS/BACKWARD AREAS (AS ANNOUNCED BY THE GOVERNMENT OF INDIA IN APRIL 1983)

Important Features

* 299 backward districts in the country have been divided into three categories depending upon the degree of their backwardness, as under :

'A' Category :	131 districts (90 'No-Industry Districts' and 41 Special Region Districts).
'B' Category :	55 districts
'C' Category :	113 districts.

* Limit of central investment subsidy :

Category 'A' :	25 per cent of the investment subject to a ceiling of Rs. 25 lakhs. (Rs. 50 lakhs at the rate of 25 per cent in the case of Electronics industries set up in 'Special Region Districts').
Category 'B' :	15 per cent subject to a ceiling of Rs. 15 lakhs.
Category 'C' :	10 per cent subject to a ceiling of Rs. 10 lakhs.

New units in blocks/talukas/urban agglomerations/extension of townships in categories 'B' and 'C' districts, where investments have exceeded Rs. 30 crores as on March 31st, 1983 shall not be eligible for investment subsidy.

* Assistance from Central Government up to 1/3 of total cost (subject to a maximum of Rs. 2 crores per district) for supplementing the resources of State Government, to the extent of balance 2/3 of total cost for development of infrastructure in growth centres of each No-Industry District.

* Permission for MRTP/FERA companies to set up non-core sector projects (not reserved for SSI units) with reduced export obligation : 30 per cent in 'A' category districts and 50 per cent in categories 'B' and 'C' districts.

* Special encouragement for establishment of nucleus plants : Enhanced rates of investment subsidy—20 per cent with a ceiling of Rs. 20 lakhs in category 'B' districts and 15 per cent with a ceiling of Rs. 15 lakhs in category 'C' districts. They will also be eligible for concessions in regard to inter-corporate investments. (Nucleus plant is one which farms out manufacture of components to the extent of at least 50 per cent of its output to ancillary units in the area and provides for at least three times direct employment in the ancillaries). Investment subsidy will, however, not be admissible to MRTP/FERA companies in respect of nucleus plants in category 'C' districts.

* Incentive scheme in force with effect from April 1st, 1983 will be valid up to March 31st, 1986.

APPENDIX II

STATE-WISE LIST OF SPECIFIED BACKWARD AREAS

CATEGORY 'A'

No-Industry Districts

1. **Bihar** ..	1.	Aurangabad
	2.	Bhojpur
	3.	Khagaria
	4.	Nalanda
	5.	Purnea
	6.	Saharsa (including Madhepura)
2. **Gujarat** ..	7.	Dangs
3. **Karnataka** ..	8.	Bidar
4. **Kerala** ..	9.	Idukki
	10.	Wynad
5. **Madhya Pradesh**	11.	Balaghat
	12.	Bhind
	13.	Chhatarpur
	14.	Chhindwara
	15.	Damoh
	16.	Datia
	17.	Dhar
	18.	Guna
	19.	Jhabua
	20.	Mandla
	21.	Narsinhapur
	22.	Panna
	23.	Rajgarh
	24.	Seoni
	25.	Shivpuri
	26.	Sidhi
	27.	Surguja
	28.	Tikamgarh
6. **Orissa** ..	29.	Balasore
	30.	Bolangir
	31.	Boudh Khondmals (Phulbani)
7. **Rajasthan** ..	32.	Jaisalmer
	33.	Sirohi
8. **Uttar Pradesh** ..	34.	Banda
	35.	Fatehpur
	36.	Hamirpur
	37.	Jalaun
	38.	Jaunpur
	39.	Sultanpur
	40.	Kanpur Dehat
9. **West Bengal** ..	41.	Bankura
	42.	Cooch Behar
	43.	Jalpaiguri
	44.	Malda

Special Region Districts

1. **Assam** ..	1.	Cachar
	2.	Goalpara
	3.	Kamrup
	4.	Karbi Anglong
	5.	Nowgaon
	6.	North Cachar Hills
	7.	Lakhimpur
	8.	Darang
	9.	Dibrugarh
	10.	Sivsagar
2. **Himachal Pradesh**	11.	Chamba*
	12.	Kangra*
	13.	Kulu*
	14.	Kinnaur*
	15.	Lahaul & Spiti*
	16.	Solan
	17.	Sirmur
	18.	Bilaspur
	19.	Hamirpur
	20.	Mandi
	21.	Simla
	22.	Una
3. **Jammu & Kashmir**	23.	Anantnag
	24.	Baramula
	25.	Doda*
	26.	Jammu
	27.	Kathua

Total No. of Districts : 131

* No Industry Districts within the Special Region category.

CATEGORY 'B'

1. Andhra Pradesh—(equivalent to 6 districts)

Srikakulam district and 5 'areas'.

Two areas from Rayalseema region comprising 22 blocks.

Area I : Comprising 13 blocks viz. Chittoor, Bangarupalam, Pulicherla, Pattur, Chandragiri and Kalahasthi (from Chittor District) and Kodur, Rajampet, Sidhout, Cuddapah, Kamalpuram, Proddutur and Pulivendla (from Cuddapah District) ;

Area II : Comprising 9 blocks viz. Tadpatri, Singanamala, Gooty, Kudai (from Anantapur district) and Dhone, Kurnool, Banganapalli, Nandyal and Giddalpur (from Kurnool district).

Three 'areas' from Telengana region comprising 43 blocks :

Area I : Comprising 14 blocks viz. Mahbubnagar, Jadhcheria, Shadnagar, Kalwakurthy and Amangal (Mahbubnagar district) and Nalgonda, Mungain, Nakrakal, Suryapet, Kodad, Huzurnagar, Miryalguda, Peddavora and Devarakond (Nalgonda District) ;

Area II : Comprising 14 blocks viz. Khammam, Thirumalaipalem, Kullur, Vallandu, Kothagudem, Aswaraopeta, Puragampad and Bhadrachalam, (Khammam district) and Mahabubabad, Narsampet, Hanamkond, Ghanapur, Jangaon and Mulug (Warangal district) ;

Area III : Comprising 15 blocks viz. Zaheerabad, Patancheravu, Narsapur Medak and Siddipet (Medak district) Yedappalli, Nizamabad, Kamareddy and Demakunda (Nizambad district) and Sircilla, Karimnagar, Sultanabad, Peddapalli, Mathani and Huzurabad (Karimnagar district).

2. Bihar (5)

Bhagalpur, Darbhanga, Champaran, Palamau and Santhal Parganas districts.

3. Gujarat (3)

Punchamahals, Broach and Surendranagar districts.

4. Haryana—(equivalent to 3 districts)

Reorganised Mahindergarh district comprising Mahindergarh and Rewari sub-division, Bhiwani district comprising Bhiwani and Dadar sub-divisions and one 'area' comprising 8 blocks viz. Hissar block No. 1 and Barwana Block of Hissar Tehsil, Hansi Block No. 1 (Hansi Tehsil), Bahuna Block (Fatehbad Tehsil), Tohana block/tehsil (Tohana Tehsil) from district of Hissar, Jind block and Julana Block (Jund Tehsil), Uchana block (Narwana Tehsil) from the district of Jind.

5. Karnataka (3)

Raichur, Mysore and Dharwar districts.

6. Kerala (3)

Alleppey, Cannanore and Malapuram districts.

7. * Madhya Pradesh—(equivalent to 4 Districts).

'Six Areas'.

Area I : Eastern Region comprising blocks viz. Korba, Baloda, Champa, Kota, Masturi and Bilha blocks (Bilaspur districts), Bhatapara, Simga, Tilda, Dharsiwa (Raipur) Abhanpur and Rajim blocks (Raipur district).

Area II : Western Region comprising blocks viz. Dewas and Tonk Khurad Block (from Dewas district), Gulana, Shujalpur and Shajapur blocks (from Shajapur district).

Area III : Northern Region comprising blocks Morana and Jaura (Morena district).

Area IV : Central Region comprising blocks viz. Bind-Itawa, Khuri-Banda (Binaika), Rahatagarh, Sagar, Sahgarh Amarmau (Sagar district), Vidisha and Gyaraspur Vidisha district).

Area V : Western Region—II comprising blocks viz. Maheshwar and Barwana (Khargone district), Ratlam and Jaura (Ratlam district), Mandsaur Malhargarh and Neemuch Mandsaur district).

Area VI : North Eastern Region comprising blocks viz. Rewa and Raipur (Garh, Rewa district).

* N.B. : As far as Madhya Pradesh is concerned out of 65 blocks equivalent to six districts—29 blocks are in the districts and included in No-Industry Districts.

8. Maharashtra (3)

Ratnagiri, Aurangabad and Chandrapur districts.

9. Orissa (5)

Kalahandi, Mayurbhanj, Dhenkanal, Keonjhar and Koraput districts.

10. Punjab (3)

Hoshiarpur, Sangrur/and Bhatinda districts.

11. Rajasthan (6)

Alwar, Jodhpur, Bhilwara, Churu, Nagaur and Udaipur districts.

12. Tamil Nadu (equivalent to 3 districts)

Three 'Areas'/Tracts comprising 33 Taluks

Area I : Comprising 12 Taluks including Sub-Taluks, viz. Ramanathapuram, Mudukulathur, Sivaganga, Paramakudi, Thiruvadan, Karaikudi and Thirupathur taluks (Ramanathapuram district) Melur taluk (Madurai district), Pudukkottai, Thirumayam, Alamgudi and Kulathur Taluks (Pudukkottai district).

Area II : Comprising 11 taluks viz. Dharmapuri, Palacode, Hosur, Dhankanikotah, Krishnagiri, Uthengarai, Harur (Dharmapuri district), Tirupattur, Vaniyampadi, Vellore, Wallajapet, (North Arcot district).

Area III : Comprising 10 taluks viz. Aruppukkottai, Sattur, Virudhunagar, Srivilliputhur, Rajapalayam West Ramanathapuram of Ramanathapuram district, Thirumangalam, Usilampatti, Nilakothai, Dindigul and Vedasandur (Madurai district).

13. Uttar Pradesh (5)

Ballia, Basti, Faizabad, Jhansi and Rae Bareily districts.

14. West Bengal (3)

Purulia, Midnapur and Nadia districts.

Total Number of Districts : 55

CATEGORY 'C'

1. Andhra Pradesh (13)

Anantapur, (excluding Tadpatri, Singanamala, Gooty and Kudai blocks), Chittoor (excluding Chittor, Bangarupalam, Pulicherla, Pattur, Chandragiri and Kalahasthi blocks), Cuddapah (excluding Kodur Rajampet, Sidhout, Cuddapah, Kamalapuram, Produtur and Pilivendla blocks) Karimnagar (excluding Sircilla, Karimnagar, Sultanabad, Peddapalli, Manthani and Huzurabad blocks), Khammam (excluding Khammam, Thirupalem, Kullur, Yellendu, Kothagudam, Aswaraopeta, Puragamped and Bhadrachalam blocks), Kurnool (excluding Dhone, Kurnool, Banganapalli, Nadyal and Giddalpur blocks), Mahbubnagar, (excluding Mahbubnagar, Jadcherla,Shadnagar, Kalwakurthy and Amangal blocks), Medak, (excluding Zaheerabad, Patancheruvu, Narasapur, Modak and Siddipet blocks), Nalgonda (excluding Nalgonda, Mungaid, Nakrakal, Suryapet, Modad Huzurnagar, Miryalguda, Peddavora and Devarakonda blocks), Nellore, Nizamabad, (excluding Yedapalli, Nizamabad, Kamareddy and Demakund blocks), Ongole, Warangal (excluding Mahabubabad, Narsampet, Hanamkonda, Ghanapur, Jangaon and Mulug blocks).

2. Bihar (6)

Muzaffarpur, Saran, Nawadah, Gaya, Begusarai and Monghyr.

3. Gujarat (7)

Amreli, Banaskantha, Bhavnagar, Junagadh, Kutch, Meshana and Sabarkantha.

4. Haryana (4)

Bhiwani (excluding Bhiwani and Dadrai sub-divisions), Hissar (excluding Hissar Block No. 1 and Barwana blocks of Hissar Tehsil, Hansi Block No. 1 (Hansi Tehsil), Bahuna Block (Tohana Tehsil), Jind excluding Jund block and Julana block from Jund Tehsil and Uchana Block (Narwana Tehsil) Mohindergarh excluding Mohindergarh and Rewar sub-division.

5. Kerala (2)

Trichur and Trivandrum.

Karnataka (7)

Belgaum Bijapur, Gulbarga, Hassan, North Kanara, South Kanara and Tumkur.

. Madhya Pradesh (19)

Bastar, Betul, Bilaspur (excluding Korba, Baloda Champa, Kota, Masturi and Bilha blocks), Dewas (excluding Dewas and Tonk Khured blocks), Hoshangabad, Khargone (excluding Maheshwar and Barwana blocks), Mandsaur (excluding Mandsaur, Malhargarh and Neemuch blocks), Morena (excluding Morena and Jaura blocks), Panna, Raigarh, Raipur (excluding Bhatapara, Simga, Tilda, Dharsiwa (Raipur) Abhanpur and Rajim blocks), Rajnandgaon, Raisen, Shajapur (excluding Gulana, Shujalpur and Shajapur blocks), Ratlam (excluding Ratlam and Jaura blocks), Rewa (excluding Rewa and Raipur (Garh) blocks), Sagar (excluding Bina-tawa, Khuri-Banda (Binaika), Rahatgarh, Sagar, Sahgarh (Amarmau) blocks), Vidisha (excluding Vidisha and Gyaraspur blocks), New Sehore.

8. Maharashtra (10)

Bhandara, Bhir, Buldhana, Colaba, Dhulia, Jalgaon, Nanded, Osmanabad, Parbhani and Yeotmal.

9. Orissa

10. Punjab (2)

Ferozepur, Gurdaspur

11. Rajasthan (8)

Banswara, Barmer, Dungarpur, Jalsore, Jhunjhunu, Jhalawar, Sikar and Tonk.

12. Tamil Nadu (9)

Dharmapuri (excluding Dharmapuri, Palacode, Hosur, Denkanikottah, Krishnagiri, Uthangararai and Harur taluks), Kanyakumari, Madurai (excluding Melur, Thirumangalam, Usilampatti, Nilakothai, Dindigul and Vedasandur Taluks), North Arcot (excluding Tirupathur, Vaniyambadi, Vellore, Wallajapet taluks), Ramanathapuram (excluding Ramanathapuram, Madukulathur, Sivaganga, Parmakudi, Thiruvadanai, Karaikudi, Thirupathur, Aruppukkottai, Sattur, Virudhunagar, Srivilliputhur, Rajapalayam taluks), South Arcot, Thanjavur, Thiruchirapalli, Pudukottai (excluding Puddukkottai, Thirumayam, Alamgudi and Kulathur taluks).

13. Uttar Pradesh (21),

Azamgarh, Badaum, Bahraich, Barabanki, Bulandshahr, Deoria, Etah, Etawah, Farrukhabad, Ghazipur, Gonda, Hardoi, Manipuri, Mathura, Moradabad, Pilibhit, Pratapgarh, Rampur, Shahajahanpur, Sitapur and Unnao.

14. West Bengal (5)

Birbhum, Burdwan, Hooghly, Murshidabad and West Dinajpur.

Total Number of Districts: 113.

Note : The following are the additions to the list of ' No Industry Districts ' in Category 'A' with effect from 1st April 1985.

1. *Rajasthan:* Barmer and Churu (as the districts of Barmer and churu have earlier been placed in Category ' C ' and ' B ' respectively they stand deleted from these categories).
2. *Maharashtra:* Gadchiroli (this district has been included in the list on the basis of a decision taken by Government to include new districts created upto 31st March 1983 comprising areas which had no large or medium scale industry as of 1979-80).

Note : Bracketed figures indicate 'No-industry' districts in special region. Total No-industry districts are therefore 90.

Source : Scheme of concessional assistance for development of No-industry districts and other backward areas, IDBI (October 1984).

II. CENTRAL INVESTMENT SUBSIDY SCHEME

The Government of India had announced in 1971 a scheme for central outright grant/subsidy for the industrial units to be set up in selected backward districts/areas. During the course of implementation of the scheme over the past few years, some liberalisation has been introduced in the scheme.

In respect of certain backward districts/areas, the scheme came into operation w.e.f. 1st October, 1970. Subsequently, the scheme was extended to other backward districts/areas w.e.f. 26th August, 1971. The list of backward districts/areas covered by the scheme in various States/Union Territories is given in the respective chapters dealing with the incentives and the facilities provided by different States and Union Territories. The investment subsidy is available to the new industrial units as also for those under expansion. An industrial unit for this purpose means any industrial undertaking and servicing unit other than those run departmentally by the Government of India/State Government/Union Territory Administration. The maximum Central Investment subsidy admissible to an eligible industrial unit will be 25 per cent of the fixed capital investment or Rs. 25 lakhs whichever is less. Central subsidies are at the rate of 15 per cent (or Rs. 15 lakhs) and 10 per cent (Rs. 10 lakhs) in 'B' and 'C' category districts.

With a view to encourage more electronic industries in hill districts included in category 'A', it has also been decided that the maximum ceiling of Central Investment Subsidy would be raised from Rs. 25 lakhs to Rs. 50 lakhs at the rate of 25 per cent in case of electronic industries set up in 'Special Region Districts' in category A.

III. TRANSPORT SUBSIDY SCHEME

This Central Scheme provides for the grant of a subsidy equivalent to 50 per cent of the transport cost of raw materials as also of finished goods between the nearest rail head and location of industrial unit in selected areas. The scheme came into force w.e.f. 18th July, 1971 for selected areas (A) and w.e.f. 24th August, 1973 for selected areas (B). These areas are listed below :

Selected Areas (A)

The State of Jammu and Kashmir and the North Eastern Region comprising the States of Assam, Meghalaya, Manipur, Nagaland and Tripura and the Union Territories of Arunachal Pradesh and Mizoram.

Selected Areas (B)

The State of Himachal Pradesh and the Hilly Areas of Uttar Pradesh State comprising the districts of Dehra Dun, Nainital, Almora, Pauri Garhwal, Tehri Garhwal, Pithoragarh, Uttar Kashi and Chamoli.

The Transport Subsidy has also been extended to the Union Territories of Andaman and Nicobar Islands and Lakshadweep from December, 1976, for the transport of raw materials and finished goods between the location of industrial unit and the ports of Madras and Cochin, respectively. From December, 1977, the scheme has also been extended to the State of Sikkim and the transport subsidy will be available to the industrial units from/to the nearest rail-head.

All industrial units (barring plantations, refineries and power generating units) both in public and private sector irrespective of their size, are eligible for the subsidy. Substantial expansion/diversification cases are also covered. 'Substantial expansion' means increase in the production of an industrial unit by 25 per cent or more of the licensed or approved capacity.

f

IV. SUPPLY OF MACHINES ON HIRE-PURCHASE TERMS

Applications to the National Small Industries Corporation from small scale units to be set up in backward areas for the supply of indigenous as well as imported machines on hire-purchase terms, are considered on a priority basis and the machines are provided on concessional terms.

The concessions are in the form of lower rates of interest and earnest money. From the units with total investment in plant and machine within Rs. 0.2 million inclusive of the cost of machines applied for, earnest money is taken at 10 per cent (normal 15 per cent) of landed cost/f.o.r. price and rate of interest charged is 11.0 per cent per annum against the normal rate of 13.5 per cent. In the case of units with investment exceeding Rs. 0.2 million, the rate of interest is 13.5 per cent for backward areas and 15.0 per cent for other areas. A rebate of 2 per cent per annum is allowed in the interest charges if the instalment is paid before the due date. The hire-purchase value is recovered in 13 half yearly instalments. In the case of existing units/new units the first instalment falls due after one year/18 months, respectively from the date of delivery of the machines.

The National Small Industries Corporation Ltd., has its Head Office near Okhla Industrial Estate, New Delhi-110 020 and four regional offices at Bombay, New Delhi, Calcutta and Madras. The branch offices of the corporation are at Pondicherry, Salem, Trichur, Patna, Cuttack, Bhopal, Kanpur, Gauhati and four prototype Development and Training Centres at Okhla, Rajkot, Howrah and Madras.

INDIAN STATES

ANDHRA PRADESH

Capital: Hyderabad. *Area of the State:* 2,75,068 sq. km. *Population:* 5,35,49,673. *Principal Languages:* Telugu and Urdu. *Industries:* There are about 50,000 units in the small scale sector and about 500 units in the medium and large scale sector. Cycle and cycle accessories, steel furniture, scientific instruments, radios, tape-recorders, electric measuring instruments, automobile parts, air conditioners, safety razor blades, PVC cables, switch gear, electrical accessories, stainless steel vessels, agricultural implements, T.V. Sets, light and heavy engineering, cement, fertilisers, edible and non-edible oils, drugs and chemicals, electronic components, petroleum products, ship building and mineral products, etc.

Cottage Industries: There are about 6,00,000 handlooms in the state that provide employment to about three million persons. The state accounts for about 20 per cent of the handlooms exported from the country.

Infrastructure: (1) *Land:* 103 industrial estates/industrial development areas with built-up accommodation. Fully developed plots are made available in 32 industrial development areas. (2) *Power:* The installed capacity, both hydel and thermal was 2,606 MW in 1981-'82. Important power projects are the Machkund, Upper Sileru, Lower Sileru, Tungabhadra Dam, Nizar Sagar hydel schemes and Nellore, Ramagundam, Kothagudam and Hussein Sagar (Hyderabad) thermal stations. (3) *Transport and Communication:* Total road kilometreage is 27,985 kms. Surfaced roads : 25,929 kms. Unsurfaced roads : 2,056 kms. The total railway length in the state works out to 17 kms length of railway route per 1,000 sq. kms of area. The state has a coastline of about 1,000 kms with a major port at Visakhapatnam, two intermediate ports at Kakinada and Masulipatnam and five minor ports. Besides, there are a number of important inland waterways in the state. Air transport facilities in the state are fairly adequate, connecting Hyderabad, Visakhapatnam, Vijayawada and Tirupati to other principal cities in the country.

Minerals: The name of mineral, estimated reserves (million tonnes) and location districts are as follows : *Coal* : 3,904, Khamam, Adilabad, Hyderabad, Mehbubnagar, Kurnool, Cuddapah, Guntur, Nalgonda and Krishna districts. *Iron Ore* : 401, Anantapur, Karimnagar, Chittoor, Adilabad, Khammam, Prakasam, Krishna, Kurnool and Cuddapah. *Lead:* 6, Guntur district. *Copper:* 7, Guntur and Khammam districts. *Clay:* 2, East Godavary and Cuddapah districts. *Barytes:* 9.5, Cuddapah, Anantapur and Kurnool districts. *Manganese:* 1.81, Srikakulam, Prakasam and Adilabad districts.

Facilities and Incentives: (*a*) *Institutional Assistance:* The following are the important institutions in the state which provide assistance to prospective entrepreneurs. (1) Department of Industries, Government of Andhra Pradesh, Hyderabad. (2) Directorate of Commerce & Export Promotion, Hyderabad. (3) Directorate of Handlooms & Textiles, Hyderabad. (4) Andhra Pradesh Industrial Development Corporation Limited, Fateh Maiden Road, Hyderabad. (5) Andhra Pradesh Small-scale Industrial Development Corporation Limited, 5-10-174, Fateh Maidan Road, Hyderabad-500 001. (6) Andhra Pradesh State Financial Corporation, 5-9-194, Chirag Ali Lane, Hyderabad-500 001. (7) Andhra Pradesh Industrial Infrastructure Corporation Ltd., 6-2-13, Saifabad, Hyderabad-500 004. (8) Leather Industries Development Corporation of Andhra Pradesh Limited, 3-6-150, Himayatnagar, Hyderabad-500 029. (9) Andhra Pradesh Mining Corporation Limited, Red Hills, Hyderabad-500 004. (10) Andhra Pradesh Forest Development Corporation Ltd. Domalguda, Hyderabad-500 029.

The State offers vast scope for agro-based and mineral based industries in the state. Some of the items which have good scope in the state include, graphite crucibles, flat glass, fibre glass, manganese dioxide, mica products, processed fruits and vegetables, milk products, sea food processing industry, silicons, salt and salt based industries, coir industries, calcium carbide, sugar, cement, aluminium smelter and ferro alloys.

Backward Districts eligible for concessional finance from the financial institutions and for 20% *deduction in income for calculating income tax liability:* Anantapur, Chittoor, Cuddapah, Karimnagar, Khammam, Kurnool, Mehbubnagar, Medak, Nalgonda, Nellore, Nizamabad, Ongole, Srikakulam and Warangal.

Districts eligible for central subsidy : Chittoor, Cuddapah, Anantapur, Kurnool, Mehbubnagar, Nalgonda, Khammam, Warangal, Medak, Nizamabad, Karimnagar.

ASSAM

Capital : Dispur. *Area of the State :* 78,438 sq. kms. *Population :* 1,98,96,843 (projected figures for 1981). *Principal language :* Assamese. *Industries :* Of the agriculture based industries, tea occupies an important place. There are nearly 750 tea plantations in the state. Petroleum and petroleum products form the other main industries. Other industries are sugar, jute, silk, paper, plywood manufacture, rice and oil milling.

Cottage Industries : The important cottage industries are handloom, sericulture, manufacture of cane and bamboo articles, carpentry and brass utensils.

Infrastructure : (1) The State Directorate of Industries has established Industrial estates in Gauhati, Tinsukhia, Nalbari, Jorhat, Dhekiajuli, Bodarpur, Sibasagar and Nowgaon. Industrialisation has been boosted up significantly with the setting up of five District Industries Centres (DIC).

(2) *Power :* The state has an installed capacity of 329.77 MW.

(3) *Transport and Communication :* Most of the areas in Assam are well connected by roads and railways as also by inland water transport. The total road length in 1982 was 59,790 kms. The length of internal waterways is more than 9,600 kms of which 1,600 kms are navigable by steamers and large country boats. Important airports are Borjhar, (Gauhati), Mohanbari (Dibrugarh), Salonbari (Tezpur), Rouriah (Jorhat) and Kumbiragram (Silchar).

Minerals : Coal, limestone, refractory clay, dolomite, corundum and natural gas.

Forestry : Assam has about 1.62 million hectares of reserved forests and 1.23 million hectares of unclassified state forests which together constitute about 35 per cent of the total geographical area as against 20.5 per cent in the country as a whole. The important timbers are : sal, nahar, sam, gomari, khair, sissu, tita champa, azar, teak, sanaru etc.

Facilities and Incentives : Institutional Assistance : The important institutions which provide assistance to the prospective entrepreneurs in the state are :

(1) Assam Industrial Corporation Ltd., Kannachal Road, Silpukhuri, Gauhati-781 003.
(2) Assam Small-Industrial Development Corporation Ltd., Bamesnimaidan, Gauhati-781 021.
(3) Assam Financial Corporation, ' Glenerquart ', Shillong-973 001.
(4) Assam Agro-Industries Development Corporation Ltd., Ulubari, Gauhati-781 007.
(5) Assam Government Marketing Corporation, Gauhati.
(6) Regional Research Laboratory, Jorhat.
(7) Small Industries Service Institute (Government of India), Gauhati.
(8) Credit Guarantee Association, Gauhati.
(9) The Assam State Warehousing Corporation, Shillong.

Developed plots in selected industrial areas with infrastructure facilities and built-up sheds in industrial estates are allotted to entrepreneurs on rental basis, hire purchase basis or on outright purchase basis. Plots are sold on no-profit no-loss basis. The state offers power subsidy upto 9 paise per unit to small scale units consuming less than 20 HP or 15 kW of electric energy. Concession on merits is allowed in salestax on industrial raw materials/finished products. Price preference of 15 per cent is allowed to local industrial products on the price quoted by outside suppliers in all Government purchases. For forest-based and mineral-based industries, Government considers on merit the fixation of royalty on an economic basis considering the rate of royalty on such goods in the neighbouring states.

The State offers scope for the development of the following industries : Wood-based (Bamboo products, building fixtures, timber seasoning, tea chests and other packing cases) ; Textile and Fibre industries (brushes and brooms, powerloom and handloom products etc.) ; Rubber products (industrial and moulded rubber products etc.) ; Paper and paper products (paper, paper bags, polythene/aluminium foil/laminated paper) ; Leather industries (Footwear, industrial leather and sports goods) ; Chemical industries (paints and varnishes, laboratory chemicals and reagents, acrylic and plastic sheets, PVC pipes and fittings) ; Engineering industries (wire products, industrial fasteners, scientific and industrial instruments) Electric/Electronic industries (transformers, transmission line hardware and domestic, electrical appliances) ; Automobile industries (Auto-leaf spring, garage equipment etc.)

Districts eligible for concessional finance from the financial institutions and 20 *per cent deduction in income for calculating income tax liability :* Goalpara, Cachar, Nowgong, Kamrup, Mikir Hills, North Cachar Hills and New Lakhimpur.

Districts/Areas eligible for Central subsidy : Goalpara, Mikir Hills, Kamrup, Nowgong, Cachar and New Lakhimpur.

Central Subsidy : The Central subsidy scheme is applicable to Assam.

BIHAR

Capital : Patna. *Area of the State :* 1,73,877 sq. kms. *Population :* 6,99,14,734. *Principal Language :* Hindi.

Industries : The most important industries in Bihar are based on iron and steel and mica. Other industries which have been well developed are cement, sugar, food and beverages, tobacco, wood and cork, paper and paper products, metal products, elcetritcal items, transport equipment, chemical and chemical products and other miscellaneous industries. There are 18,918 small-scale industrial units in the state.

Infrastructure : (1) *Land :* Six Industrial Area Development Authorities are functioning at Adityapur, Bokaro, Darbhanga, Patna, Ranchi and Muzaffarpur. There are 29 industrial estates and 23 industrial areas functioning in the state. (2) *Power :* Installed capacity of both thermal and hydel power as on March 1983 was 2361.5 MW. Major power projects are the Patratu thermal power station, Barauni thermal power station, Subaranarekha and Kosi hydro electric power station under Bihar State Electricity Board and Bokaro, Chandrapura and Durgapur thermal power stations along with Tilaiya, Maithon and Panchet hydel power stations under the Damodar Valley Corporation. (3) *Transport and Communication :* 21,593 kms of surfaced and 72,439 kms of unsurfaced roads. With the stretch of Ganga extending over a length of 485 kms between Buxar and Rajmahar and that of Ghagra having a length of 160 kms, Bihar has a potential for development of extensive waterways. Bihar has 3 main aerodromes and 32 landing strips.

Minerals : Bihar is one of the richest states in India in mineral wealth, accounting for about 40 per cent of the total mineral production in the country. Almost entire production of copper, apatite and kyanite in the country comes from this state. It has more than 50 per cent of the known deposits of coal (cent per cent coking coal). It is also the principal iron ore producing state in the country. Other minerals having significant production in Bihar are : manganese limestone, mica, quartzite graphite.

chromite, asbestos, barytes, beryl, felspar, columlite, saltpetre, glass sands, slate lead, building stones, radioactive minerals like samaraketa, annemodesle, pitchblends, tantalite etc. The state therefore offers enormous scope for establishment of mineral based industries.

Facilities and Incentives : Instituional Assistance : With a view to stepping up the pace of industrial development the Government has set up several financial institutions and guidance bureaus.

(1) The Bihar State Credit and Investment Corporation, Biscomaun building, Patna-800 001.
(2) State Directorate of Industries, Old Secretariat Building, Patna-800 001.
(3) Bihar State Industrial Development Corporation Ltd., Purani Chowk, Bunder Bagicha, Patna-800 001.
(4) Bihar State Small Industries Corporation Ltd., BCI Building, Gandhi Maidan (East), Patna-800 001.
(5) Bihar State Exports Corporation, 2nd Floor, Biscomaun Building, Patna-800 001.
(6) Bihar State Leather Industries Development Corporation, Boring Road, Patna-800 013.
(7) Bihar State Mineral Development Corporation, Raj Hotel, Main Road, Ranchi-834 001.
(8) Bihar State Electronics Development Corporation Ltd., Water Tower, Patna-800 013.

Other facilities : Sheds in the industrial estates with facilities of water, electricity, roads etc. are made available to new small scale units at 50% of the economic rent for a period of 5 years. Besides subsidised electricity tariff, technical assistance, prepartion of project feasibility reports, exemption of sales tax and multi-point sales tax for a period of first 10 years in the case of medium and large scale units and 5 years for small scale units and price preference of 15% to small industries over the products of large and medium industries from and outside the state, are also offered to the prospective entrepreneurs so as to encourage investment in the state.

The following are the list of industries identified as having definite-scope in the state of Bihar : cement, refractories, mica based products, malleable castings, steel strips, special steel, ceramic products, aluminium and chemicals based on coke-oven by-products such as electrode paste, anthroquinone from anthrocene etc. On the engineering side, the items that could be manufctured taking into account local demand facilities available are, agricultural implements, tractors, dairy, and ceramic machinery, automobile ancillary castings, plastic machinery etc.

Districts/Areas eligible for concessional finance from the financial institutions and for 20 per cent deduction in income for calculating income tax liability : Santhal Parganas, Bhagalpur, Palamau, Champaran, Saran, Darbhanga, Purnea, Muzaffarpur, Nalanda, Aurangabad, Nawadiah, Gaya, Bhojpur, Begusarai and Monghyr.

Districts eligible for central subsidy : Darbhanga, Bhagalpur, Champaran, Palamau, Saharsa and Santhal Parganas.

GUJARAT

Capital : Gandhinagar. *Area of the State :* 1,96,024 sq. km. *Population :* 3,40,85,799 *Principal Language :* Gujarati.

Industries : The major industries of the state are textiles (including ginning and pressing of cotton), heavy chemicals such as caustic soda, soda ash, petro-chemicals, drugs and pharmaceuticals. electronic and electrical goods, engineering goods, machine tools, cement, sugar, vegetable oils, dairy products, pesticides, dyestuffs etc. The number of registered small-scale industrial units is over 35,000.

Infrastructure : (1) *Land:* There are 140 industrial estates in Gujarat, the largest number among the states of India, with the all inbuilt infrastructural facilities. (2) *Power :* The total installed capacity, both hydel and thermal in 1983 was 2,770 MW. (3) *Transport and Communication : Roads* (1978-79) Of the total 12,717 kms of national highways, state highways and other state PWD roads, 11,850 kms was surfaced and 867 kms unsurfaced. *Railways :* 5,616 kms consisting, 155 kms of broad guage rail, 3,326 kms of metre gauge rail and 1,135 kms of narrow gauge rail . *Airways :* Ahmedabad is the major airport in the state while there are minor airports at Baroda, Bhainagar, Bhuj, Keshod, Porbandar, Rajkot, Kandla, Jamnagar and Surat. (4) *Sea Ports :* Gujarat has 11 intermediate and 34 minor ports, which accounts for 40 per cent of the total traffic handled by intermediate and minor ports of the country.

Minerals : The state is rich in minerals like salt, limestone, manganese, gypsum, china clay calcite, bauxite etc. Large deposits of bauxite of very good grade are located in Saurashtra and Kutch. The reserves of bauxite are about 17 million tonnes. The fluorite deposits located near Chhota-Udepur in Vododara district is one of the largest in Asia and has reserves of 11.6 million tonnes. Limestone reserves run into several thousand million tonnes with the best quaility located in Saurashtra and Kutch. The other minerals are lignite, china clay, glass sand and quartz, dolomite, agate, calcite etc.

Facilities and Incentives : (*a*) *Institutional Assistance :* The following institutions render assistance in the industrialisation of the state.

(1) Gujarat Industrial Development Corporation, Fadia Chambers, Ashram Road, Ahmedabad-380 009.

(2) Gujarat State Industrial Investment Corporation, Natraj Chambers, Ashram Road, Ahmedabad-380 009.

(3) Gujarat State Finance Corporation, Jal Darshan, Ashram Road, Ahmedabad-380 009.

(4) Gujarat Small Industries Corporation, Bhagavati Chambers, Ashram Road, Ahmedabad-380 009.

(5) Gujarat Agro-Industries Corporation, ' Khet Udyog ', Stadium Road, Ahmedabad-380 009.

(6) Gujarat Mineral Development Corporation, Kanij Bhavan, Ashram Road, Ahmedabad-380 009.

(7) Gujarat Export Corporation, Industry House, Ashram Road, Ahmedabad-380 009.

(8) Small Industries Service Institute, Government of India, Harisidh Chambers Ashram Road, Ahmedabad-380 009.

(9) Gujarat Industrial Co-operative Bank Ltd., Ashram Road, Ahmedabad-380 009.

(10) Gujarat State Textile Corporation Ltd., Handloom House (1st Floor), Ashram Road, Ahmedabad-380 009.

(5) *Other facilities and Incentives :* Availability of industrial sheds on hire-purchase basis to small-scale units, listing of reserved and priority products, subsidy given by the Central Government on capital cost to invest in backward districts, moratorium on the interest payment in the initial stage of production and conversion of sales-tax into a loan as provided for by agencies in the state level entrepreneurship development schemes etc.

The Kandla Free Trade Zone, located on the Kandla-Ahmedabad national highway, has been conceived primarily as an export promotion measure. The industries to be set up in the zone have to be 100 per cent export oriented. These export-orineted units could avail of the various special concessions offered by the zone. The zone also offers large number of concessions to non-residents of Indian origin.

The state offers a bright prospect for the electronics industry, especially in Baroda which has all the infrastructure facilities for the same. The GIDC has set up an electronics estate in the midst of Makarpura GIDC complex, which offers air-conditioning facilities for exportable units. The members of this estate enjoy electronic testing laboratory facilities besides the usual technical, financial and marketing assistance.

The phenomenal progress expected of the fertiliser industry in Gujarat in the next five to seven years will demand localisation of small and ancillary industries or serving units. In addition, with the running of petro-chemicals complex in the state, downstream units have sprung up to convert the black liquid into various consumer items. The establishment of Petro-chemicals complex near Baroda has thrown open a number of fields like phenol, carbon black, dye-stuffs, fine chemicals, pesticides, synthetic resins etc. There is also scope for establishment of chemical plant fabricating works for the manufacture of chemical processing machinery such as pressure vessels, auto claves, heat exchangers, rectification and distillation columns, centrifugal and filter presses. There is also scope for marine chemicals such as potasium chlorate, synthetic cryolite, octanol etc., steel castings and forgings, machine tools, conveyors, ceramic and dairy equipment etc.

The longest coastline and the rich fishing grounds in India which are located in Gujarat offer great scope for fishing industry from export point of view.

Districts/Area eligible for concessional finance from the financial institutions and for 20 *per cent deduction in income for calculating income tax liability :* Panch Mahals, Kutch, Amreli, Bharuch, Sabarkanta, Banaskantha, Bhavanagar, Meshana, Surendernagar and Junagadh.

Districts/Areas eligible for central subsidy : Panchmahals, Broach and Surendernagar.

HARYANA

Capital : Chandigarh. *Area of the State :* 44,212 sq. km. *Population :* 1,29,22,618 *Principal Language :* Hindi.

Industries : The major industries in the state are paper, cotton and woollen textiles, cement, sugar, cycles and cycle parts, sewing machines, agricultural implements and machine tools, tractors steel re-rolling, scientific instruments, sulphuric acid, electronic components, television, refrigerators etc. As many as 314 large and medium units and 49,000 small scale units are engaged in the manufacture of a wide range of goods. Haryana has unique locationl advantage of being in close proximity to New Delhi, which is the nerve centre of commercial activity in the country. Most of the Industrial towns and estates are located within the National Capital region.

Infrastructure : (1) *Land :* Four industrial areas at Bahadurgarh, Sonepat, Panipat and Yamuna Nagar and seven industrial development colonies at Ambala, Gurgaon, Hisar, Rai, Rohtak, Karnal and Sonepat have been developed by the Haryana Industries Department. In addition, many industrial estates with developed land and built-up sheds have been set up. An ancillary industrial estate has been set up at Panchkula near Chandigarh and an Electronics Functional Estate at Gurgaon just about a kilometre from Delhi. Besides, the Industries Department, the Urban Estate Department and colonisation department also make available, developed land for industrial purpose at many places. (2) *Power :* Haryana is the first state in India to achieve 100 per cent rural electrification. The total installed power capacity as on 31st August 1984 was 1433 MW from various hydel and thermal stations. This includes Haryana's share from Bhakra Nangal, Beas project and Indraprastha thermal power station in which Haryana is a partner state besides Haryana's own thermal power stations at Faridabad and Panipat. Special attention is being paid to the generation of additional power so as to provide adequate power for agricultural and transport network. Communications and transport branch out to all areas in the state. Every village is connected by a metalled road. Haryana is now well-supplied with a net-work of roads and bridges which has enabled development to reach the door step of the village dweller. Roads have been stretched from 5100 km in 1966 to 19660 km today. Haryana is also well served by railways. Convenient air links are provided at both Palam and Chandigarh.

Facilities and Incentives : Institutional Assistance : Following are the important corporations set up by the State Government to accelerate the pace of industrialisation in Haryana.

(1) Haryana State Industrial Development Corporation Limited, SCO 4 & 5, Sector 17-A, Chandigarh-160 017.

(2) Haryana Financial Corporation, 17-18-19, Sector 17-A, Chandigarh-160 017.
(3) Haryana State Small Industries and Export Corporation Limited, 2nd Floor, Bank of India Building, Sector 17-B, Chandigarh-160 017.
(4) Haryana State Handloom and Handicraft Corporation.

Other Facilities and Incentives : Land on hire purchase schemes, subsidised power tariff, tax ncessions, preference in purchase schemes, financial assistance, technical assistance and assistance wards preparation of feasibility report. The Harijan Kalyan Nigam provides loans to members of the heduled castes for various industries. The entire available evacuee land has been exclusively reserved r restricted auction among the scheduled castes.

The state offers good scope for development of the following industries : Live-stock based dustries, leather, agro-based industries, activated carbon, particleboard, fibreglass, electronic mponents, automobile ancillaries, refrigeration equipment, castings etc.

Districts eligible for central subsidy : Mohinderharh sub-division, Rewari Sub-division, Bhiwani b-division, Dadri sub-division, Hisar block No. 1, Barwala block, Hansi block Bhuna block, Jind lock Julanae, and Uchana block.

HIMACHAL PRADESH

Capital : Simla. *Area of the State :* 55,673 sq. km. *Population :* 42,80,818. *Principal nguages :* Hindi and Pahari. *Industries :* Major products manufactured are cement, fertilisers, urpentine, rosin, varnish, monoblock pumps, electric meters, sugarcane crushes, television sets and gricultural implements. In the small-scale sector, microscopes, watch parts, clinical and industrial hermometers, hospital and heating equipmnts are being manufactured. Among the indigenous village ndustries are sheep-rearing, wood carving and blacksmithy, spinning, weaving, leather tanning, pottery nd bamboocraft. There are 58 medium large sized and 6400 small-scale industrial units in the State.

Infrastructure : (1) *Land :*Industrial estates with various infrastrucure facilities have been leveloped at Solan, Dharmapur, Una, Jawali, Mehtapur, Dehar-Gopipur and Kangra. Industrial reas have been established at Barotiwala, Nagrota, Mehatpur, Paonta-Sahib, Bilaspur, Shamshie Solan, Parwanoo and Peo. New Industrial areas are being established at Mandi, Amb in Una District, Hamirpur, Chamba and Shogi. (2) *Power :* The state is rich in hydel resources. The total potential s 12,500 MW at 60 per cent load factor. The rivers Sutlej and Beas provide about 80 per cent of the otal hydel power resources. (3) *Transport and Communication :* Roads are the main mode of transport in this hill-state. The total length of national highways, state highways and other state PWD road was 3,735 kms in 1983-84. There are only skeleton railway and airway facilities and practically no waterways to cater to the need of the goods traffic. Great emphasis is, therefore, being laid under the plans for further development of roads in the state.

Minerals : The state has rich deposits of limestone, gypsum, dolomite, barytes and pyrites. These are mainly found in Sirmur, Bilaspur, Simla, Chamba and Kangra districts.

Facilities and Incentives : Institutional assistance is rendered through the following corporations set up by the State Government :

(1) Himachal Pradesh, Financial Corporation Limited, ' Himrus ', Simla-171 001.
(2) Himachal Pradesh Mineral and Industrial Development Corporation Ltd., ' Himrus ', Simla-171 001.
(3) Himachal Pradesh State Small Industries and Export Corporation Ltd., Kishore Bhawan, ' The Mall ', Simla-171 001.
(4) Himachal Pradesh State Handicrafts and Handloom Corporation Ltd., Simla.

Other, facilities and incentives includes lease of land for 95 years on no-profit no-loss basis, subsidy on electric power tariff, financial assistance towards machinery, raw materials purchase, construction and preparation of feasibility reports, exemption from sales-tax/purchase-tax, price preference in government purchases and technical guidance. The following items offer good scope for further development in the state : rayon grade pulp, distillery, salt based products, newsprint, rosin and turpentine, turpene chemicals, watches, fruit processing and pencil slates.

Districts/Areas eligible for concessional finance from the financial institutions and for 20 *per cent deduction in income for calculation income tax liability :* Chamba, Kinaur, Kangra, Kulu, Lahaul and Spiti, Sirmur and Solan.

Districts/Areas eligible for central subsidy : Kangra, Chamba, Kulu, Sirmur and Solan. The central transport subsidy scheme is also applicable to Himachal Pradesh.

JAMMU AND KASHMIR

Capital : Srinagar (Summer), Jammu (Winter). *Area of the State :* 2,22,236 sq. kms.* *Population :* 59,87,389**. *Principal languages :* Kashmiri, Dogri, Gojri, Urdu, Batti, Dardiro, Pahari and Ladakhi. *Industries :* The efforts to industrialise the state has achieved satisfactory results but in view of the non-availability of potential natural resources and manpower, much remains to be done. Industries in the state have for long been confined to handicrafts, handloom weaving sericulture and khadi and village industries. Over 7,500 small scale industrial units are currently in production in the State. Main cottage industries are carpet and shawl making, engraved carpentry and handicrafts. Among the other industries which have come up in the state are the HMT watch factory and an ancillary unit of the Indian Telephone Industries at Srinagar, a cement factory at Wuyan, a spinning mill and a briquetting plant at Shalteng. Tourism industry plays an important role in the State economy. All the 10 districts of the state are backward and are eligible for concessional finance from financial institutions. The state offers good scope for development and/or expansion of the following industries : T.V. sets, electronic components, paints and varnishes, leather tanning, sports goods, wooden packing cases, fruit preservation and canning, forest based products, hotel, cattle and poultry feed etc.

Infrastructure : (1) *Land :* The number of industrial estates are 20. The developed land in the industrial estates are made available at a subsidised rate of Rs. 24,000 per acre which is claimed to be one of the lowest prices in the country. The Rangreth estate is reserved for the electronics industry. (2) *Power :* Power generation stands at well over 210 MW since the commissioning of the Lower Jhelum hydel project. Other power projects under different stages of implementation are Salal Hydel Project and Karrah Micro hydel scheme. Important schemes implemented since 1947 are the Ganderchenani, Kalakot and Upper Sind. The power supply system in the valley has been linked with that of northern India with the commissioning of the high voltage transmission lines between Srinagar and Pathankot. (3) *Transport and Communication :* As the state has mostly mountaneous regions, railways play a comparatively minor role in transport system within the state. Emphasis is laid on construction of roads. The total road length in the state is 8,782 kms excluding briddle paths. The two airports in the state, namely Srinagar and Jammu, provide air link with the rest of the country.

Minerals : The state has substantial reserves of limestone and lignite. Some coal reserves are also found. There are possibilities of working economically the deposits of gypsum, copper, lead, bauxite, borax and sulphur which are found in all the three regions of the state.

The forest wealth of the state is one of its greatest assets. These forests have large areas under walnut, ash, mulberry, chinar bamboo, kahir and eucalyptus,which have great utility as raw material for industries.

Facilities and Incentives : Institutional assistance is rendered through the following state corporations : (1) The Jammu & Kashmir State Industrial Development Corporation Ltd., Haft Chinar, Srinagar-190 001 and (2) The Jammu & Kashmir State Financial Corporation, PWD Buildings, Residency Road, Srinagar-190 001.

Other Incentives : Industrial areas with necessary infrastructure facilities are developed by the tate Government at suitable places for leasing out to the entrepreneurs, subsidised power tariff, financial ssistance towards purchase of machinery and market feasibility reports, concessions on sales tax, toll tax, rice preference of upto 15 per cent. The main attraction for industries is the non-applicability of the MRTP Act in the State. Besides the industries in the state are eligible for 75 per cent transport subsidy rovided by the Central Government to cover the cost of raw material transportation from rail head o factory site and movement of finished goods from factory to rail head. The State Government also ubsidises the air freight of upto 50 per cent for the electronics industry, both for inflow of raw materials nd onward freight of finished products. Steel and cement are also made available at equalised prices ll over the state.

Districts eligible for concessional finance from the financial institutions and for 20 *per cent deduction in income for calculating income tax liability :* Srinagar, Baramula, Anantnag, Jammu, Kathua, Udhampur, Doda, Ladakh, Poonch and Rajouri.

Districts/Area eligible for Central Investment Subsidy : Srinagar, Anantnag, Jammu, Dodak Baramula.

The central transport subsidy scheme is applicable to the state of Jammu and Kashmir.

NOTE : * Includes area under illegal occupation of Pakistan and China.

** The population excludes that of areas currently under the illegal occupation of Pakistan and China.

KARNATAKA

Capital : Bangalore. *Area of the State :* 1,91,791 Sq. km. *Population :* 3,71,35,714. *Principal Language :* Kannada.

Industries : Engineering industries constitute the major industrial group in the state. Except for the few large public sector enterprises, the industrial structure is dominated by small and factory type enterprises. The Five Central Government undertakings located in Bangalore manufacture telephone equipment, aircraft, electronic equipment, machine tools and earth moving equipment. The major items of industrial production in the private sector are sugar, cement, fertilisers, cotton textiles, chemical and pharmaceutical goods, paper, glass, ceramics and electrical goods. Karnataka accounts for 85 per cent of the raw silk produced in the country. Apart from silk, sandal soap and sandal oil are well known in the world market. Amongst the agro-based industries, the largest are the cotton ginning and sugar industries. Oil mills,coffee curing works, cashewnuts industry, cigarette manufacture, rice milling etc., are the other miscellaneous agro-based industries. The forest based industries are the paper industry, saw milling, manufacture of plywood and veneer, matches, wooden articles, distillation of sandalwood oil, etc. The state is rich in mineral resources. Important among them are high grade iron ore, copper, manganese, chromite and china clay. Karnataka is the only State where gold mining is carried on. The mineral-based manufacturing units are tiles, cement, hume pipes, glass, ceramics, insulators and firebricks. Sericulture is the most important of rural industries providing employment to about 2 million people.

Infrastructure : (1) *Land :* The Karnataka Industrial Area Development Board which has been set up under the Karnataka Industrial Areas Development Act, 1966 develops the land transferred to it by the Government with infrastructural facilities and makes it available to the entrepreneurs in the state. There are 67 industrial estates in the state (including ancillary industrial estate), 75 notified areas have been taken up by the Karnataka Industrial Areas Development Board for development during 1982-83.

(2) *Power :* The State is richly endowed with hydro electric power potential. The installed capacity of power generation is 2,009.80 MW. (3) *Transport and Communication :* The facilities for

the transport of goods and raw materials in Karnataka are provided by (*a*) 2,936 kms of railway; (*b*) the road network measuring 1,02,151 kms (Surfaced and Unsurfaced); (*c*) the coastline with 21 ports including Mangalore and Karwar and (*d*) airports and landing grounds at Bangalore, Belgaum and Mangalore. Out of the 97,401 kms of National highways, State highways and other state PWD roads completed by 1980, 64,503 Kms were surfaced and 32,898 Kms where unsurfaced roads.

Facilities and Incentives : The State Government agencies associated with the development of industries in the Karnataka State are (1) The Karnataka State Industrial Investment and Development Corporation Ltd., 'Hari Nivas', 36, Cunnigham Road, Bangalore-560 052. (2) Karnataka State Financial Corporation, 25, Mahatma Gandhi Road, Bangalore-560 001. (3) Karnataka Industrial Co-operative Bank Ltd., Bangalore-560 004. (4) Karnataka Small Industries Development Corporation Ltd., Industrial Estate, Rajaji Nagar, Bangalore-560 044. (5) Karnataka Agro-Industries Corporation Ltd., Hebbal, Bangalore-560 024. (6) Karnataka Fisheries Development Corporation Ltd., Hoige Bazaar, Mangalore-575 001. (8) Karnataka State Electronics Development Corporation Ltd., 'Emlyn Haven', 30, Race Course Road, Bangalore-560 001. (9) Karnataka State Handicrafts Development Corporation Ltd., Webbs Complex, 26 Mahatma Gandhi Road, Bangalore-560 001.

Other incentives and facilities include, allotment of land to entrepreneurs on lease-cum-sale basis, reduction in the rates of power tariff for power intensive units, financial assistance for small scale, medium and other industrial units, concessions in sales-tax and allotment of sheds and loans on preferential basis to technically qualified persons.

On October 30th 1982, the State Government of Karnataka announced a 14 point package of incentives and concessions to attract more industries to the state, and subsequently some more modifications have been done. This package includes revision of certain existing concessions and also new ones for entrepreneurs wishing to start units in the small and tiny sectors (*a*) Investment subsidy on fixed assets of upto 15 per cent for 124 taluks in the state ranging from Rs. 75,000 for tiny units, Rs. 7,50,000 for SSI units and Rs. 15,00,000 for larger units, (*b*) Interest-free tax loan for both large and SSI units under which the new units will get 25 per cent of the cost of machinery, 10 per cent of the cost of building which is repayable in 5 years after a moratorium of 5 years, (*c*) Working capital loan : The SSI units are eligible for an interest-free working capital loan equivalent to the sales tax actually paid by the entrepreneur in acquiring the plant and equipment, building materials and raw materials, (*d*) Interest subsidy of 50 per cent of the interest payable on long-term loans secured by the new units from the K.S.F.C. and banks, (*e*) Subsidy on electric tariff, 30 per cent for the first year, 20 per cent for the second year, 10 per cent for the third year and no power cut for the SSI units for first five years. There is already full exemption on electricity tax, (*f*) Subsidy on generators, housing subsidy, assistance for technical know-how, subsidy of 75 per cent for the SSI units and 100 per cent for tiny ones, on the cost of project reports, (*g*) Special scheme for entrepreneurs belonging to SC/ST and women entrepreneurs in the form of management grant, payment of rent on industrial sheds and foreign travel assistance for procurement of technical know-how, (*h*) Pioneer industry subsidy of 5 per cent of the cost of the fixed assets for new units with an investment of Rs. 5 lakhs or more. Only six such units first coming up in each taluk shall be eligible, (*i*) Reimbursement of registration fees with the ISI, the Commodity Boards and the Export Promotion Councils.

Incentives are not available for the following industries : Mini steel plants, rolling mills, large cement and paper plants, sugar factories, rice mills, roller flour mills, alcohol breweries, mining industries and forest based industries.

Scope for further development : The following items have scope for development in the State : Sorbitol, Ethyl hexanol, Synthetic Resins, Protein concentrates, Dye-stuffs, Leather products, Alloy steel, Automobile ancillaries, Electronic components, Nitric acid etc.

Districts/Areas eligible for concessional finance from the financial institutions and for 20 per cent deduction in income for calculating income tax liability : Belgaum, Bidar, Bijapur, Dharwar, Gulbarga, Hassan, Mysore, Uttara-Kannada, Raichur, Dakshina Kannada and Tumkur.

Districts/Areas eligible for central subsidy :

(*a*) Bidar—*No-industry District*—25%.

(*b*) Raichur, Mysore and Dharwar—15%.

(*c*) Belgaum, Bijapur, Gulbarga, Hassan, Dakshina Kannada, Uttara Kannada, and Tumkur—10% Central subsidy plus 5% State subsidy.

In other districts of the State certain Taluks are eligible for 15% state subsidy and others 10% tate subsidy. Except Bangalore South and North Taluk and area coming under Mysore City limits all ther places in the State are covered by 15% or 10% investment subsidy.

KERALA

Capital : Trivandrum. *Area of the State :* 38,863 sq. km. *Population :* 2,54,53,680. *Principal language :* Malayalam.

Industries : Industrial growth in Kerala has so far remained confined mainly to the traditional cottage industries. These industries employ about 80% of the work force in the industrial sector. Important industries are coir, cashew, rubber, tea, ceramics, electrical and electronic appliances, telephone cables, transformers, bricks and tiles, drugs and chemicals, general engineering, plywood, splints and veneers, beedi and cigar, soaps, oils and fertilizers. In recent years, a number of manufacturing units have sprung up for producing precision instruments, machine tools, petroleum and petroleum products, pints, aluminium, communication cables, rayon, scooter, glass and non-ferrous metals. Principal export products are cashewnut, tea and coffee, pepper and other spices, lemon grass oil, seafoods, rosewood, coir and coir products and rubber products. The total number of small scale industrial units was 28,117 in 1984.

Infrastructure : (1) *Land :* Land has been acquired and deveolped by the government to cater to the requirements of industries in the following areas : Thikkakara, Angamaly, West Hill, Vaikom, Quilon, Punnapra, Kadakampalli, Akulam, Aroor, Edayar, Angamaly and Pudusseri. Besides there are 18 industrial estates in Kerala at the rate of two per district except in the case of Malapuram and Calicut districts. Built-up sheds are allotted to the entrepreneurs in these estates. In addition, a total of 100 mini industrial estates to accommodate 1,000 small scale units are also being organised. (2) *Power :* The total installed capacity of power in the state in 1983-84 was 1,011.5 MW from various hydel stations. Heavy rainfall and a large number of swift flowing rivers and streams provide considerable potential for power generation. The important power projects are Pallvasal, Sengulam, Neriamangalam, Panniar, Peringalkuthu, Sholayar, Sabarigiri, Kuttiyadi and Idukki. (3) *Transport and Communication : Road :* With the total road length of 15,987 kms of which 14,122 were surfaced, Kerala has a well connected system of road transport touching every nook and corner of the state. *Railways :* The total length of the railway line is 887 kms of which 774 kms are on the broad guage system and 113 kms on the metre gauge system. *Ports :* The state has an extensive coast-line and apart from some minor ports, there is a major port at Cochin.

Minerals : Important minerals found in the state are limenite, rutile, monazite, zincon, sillimanite and clays, quartz sand and lime shell.

Facilities and Incentives : Institutional assistance is rendered by the following government agencies : (1) Kerala Financial Corporation, K. F. C. Buildings, Vellayambalam, Trivandrum-695 001. (2) Kerala Handloom Finance and Trading Corporation Ltd., 32/249, Thilleri Road, Cannanore-670 001. (3) Kerala Industrial & Technical Consultancy Organisation Ltd. (KITCO), Shema Building, Mahatma Gandhi Road, P.B. No. 1820, Cochin-682 016. (4) Kerala State Electronics Development Corporation Limited, Keltron House, Vellayambalam, Trivandrum-695 001. (5) Kerala State Industrial Development Corporation Ltd., Trivandrum-695 003. (6) Kerala State Small Industries Development & Employment Corporation Ltd., Kerala State Housing Board Building, Santhinagar, Trivandrum-695 003. (7) Kerala Agro-Industries Corporation Ltd., Kessan Jyoti Fort, Trivandrum-695 023.

Other facilities and incentives include, developed land in different areas to intended industrialists either on full payment, lease or on easy instalments basis. Besides, built-up sheds are also available in different industrial estates, subsidised power tariff, preparation of project feasibility reports for prospective entrepreneurs free of cost, financial assistance under small industries aid scheme, special incentives to large and medium scale units in the five backward districts, interest free sales tax loan for new small scale units, price preference of 15 per cent in Government purchases for products of small industries over the products made outside the state in the case of industries in which government have taken shares and 10 per cent price preference for other industries etc. Under the commercial scheme programme, a factory is put up and machinery erected at Government cost and then given to private parties on easy hire-purchase basis on reasonable terms.

The following items have scope for development in the state : paper and paper products, textiles, oils, ceramics, sand lime bricks, varnishes and paints, automobile ancillaries, agricultural implements, cannings of fish and other marine products, rubber based products, machine tools, hand tools, electronics, surveying instruments, cycles, house-hold utensils, titanium dioxide, zirconium and ceramic pacifiers, ceramic colours and refractories.

No-industry Districts : Wynad and Idukki.

Districts eligible for concessional finance from the financial institutions and 20 *per cent deduction in income for calculating income tax liability :* Alleppey, Trivandrum, Cannanore, Trichur and Malapuram.

Districts/Area eligible for central subsidy : Alleppey, Cannanore and Malapuram.

Districts covered by Rural Industries Project Assistance : Alleppey, Malapuram, Kozhikode, Trivandrum.

MADHYA PRADESH

Capital : Bhopal. *Area of the State :* 4,43,446 sq. km. *Population :* 5,21,78,844. *Principal language :* Hindi. *Industries :* The state is gifted with rich mineral resources and abundant forests. It also has vast potentialities for the development of power and irrigation projects. The major industries are sugar, straw board mills, refractories, potteries, textile machinery, steel casting and re-rolling, industrial gases, synthetics and drugs, biscuit manufacturing, engineering tools, mini steel plants, chemical fertilizers, insecticides and pesticides, solvent extraction plants, rayon and art silk, dry batteries, gears, electrodes and electrical goods. The number of heavy and medium industries in the state is 6320 and the number of small scale industries in production is 1,03,260.

Infrastructure facilities :

(1) *Land :* There is a network of industrial estates in the following places : Indore, Gwalior, Raipur, Bhopal, Jabalpur, Bilaspur, Saugor, Ratlam, Katni, Burhanpur, Satna, Vidisha, Guna, Shahdol, Durg, Rajnandagaon, Bhilai and Ujjain. Besides 29 semi-urban industrial estates and 31 rural work sheds have also been constructed.

In order to facilitate dispersal of industries on a regional basis, four growth centre development corporations have been set up at Indore Jabalpur, Raipur and Kewa. 36 of the 45 districts in the state are categorised as industrially backward districts. In addition to these, the state Government has identified four more districts namely, East Nimar (Khandwa), Satna, Shahdol and Ujjain as backward to be eligible for concessions from the state government.

Classification of districts for incentives from Madhya Pradesh Government

Advanced Districts	Backward Districts		
	Category ' A '	Category ' B '	Category ' C '
1. Bhopal	1. Bilaspur	1. Balaghat	1. Bastar
2. Durg	2. Dewas	2. Betul	2. Bhind
3. Gwalior	3. East Nimar (Khandwa)*	3. Chhindwara	3. Chhatarpur
4. Indore	4. Hoshangabad	4. Damoh	4. Datia
5. Jabalpur	5. Mandasaur	5. Guna	5. Dhar
	6. Morena	6. Narsimhapur	6. Jhabua
	7. Raipur	7. Raigarh	7. Mandla
	8. Ratlam	8. Rajnandagaon	8. Panna
	9. Satna*	9. Sagar	9. Raisen
	10. Shahdol*	10. Sehore	10. Rajgarh
	11. Ujjain (a)*	11. Seoni	11. Rewa
	12. Vidisha		12. Shahjapur
			13. Shivpuri
			14. Sidhi
			15. Surguia
			16. Tikamgarh
			17. West Nimar (Khargone)

NOTES :

(a) Ujjain was brought into category ' A ' backward districts from the category of advanced districts with effect from November 17, 1981.

* These districts are not categorised as backward by government of India and do not qualify for concessions given by it to backward districts. However, they do qualify for various concessions given by the state government to backward districts of Category ' A '.

No-Industry Districts : The following 18 districts have been identified as ' No-Industry ' districts in Madhya Pradesh : Balaghat, Bhind, Chhatarpur, Chhiwadra, Damoh, Datia, Dhar, Guna, Jhabua, Mandla, Narsimhapur, Panna, Rajgarh, Senoi, Shivpuri, Sidhi, Surguia and Tikamgarh. All the backward/no-industry districts get preferential treatment by way of various concessions either from central government and financial institutions or the state government for setting up of new industrial units in these districts.

(2) *Power :* The installed power generating capacity in the state as on October 1982 was 1631 MW. The state has a good potential of hydro electric power generation.

(3) *Transport and Communication :* The total length of national highways, state highways and other PWD roads in M.P. was 65,852 kms (50,928 kms surfaced and 14,924 kms unsurfaced) in 1981-82. The total length of the railway lines in the state is approximately 5,710 kms The important airports are Bhopal, Gwalior, Raipur and Indore.

Minerals : The south-eastern and eastern areas of the state are rich in minerals, Coal, iron ore, limestone, dolomite, bauxite, copper phosphorite, felspar, asbestos, diamond and manganese ore, are the principal deposits.

Facilities and Incentives : Institutional assistance is rendered by the following government agencies : (1) Madhya Pradesh Audyogik Vikas Nizam Ltd., 36, Bhadbhada Road, New Market, Bhopal-462 003. (2) Madhya Pradesh Financial Corporation, Finance House, Bombay-Agra Road, Indore-452 001. (3) Madhya Pradesh State Agro Industries Development Corporation Ltd., New Market, Tatyatope Nagar, Bhopal-462 003. (4) Madhya Pradesh State Industries Corporation Ltd., ' Panchanan ', Malviya Nagar, Bhopal-462 003. (5) Madhya Pradesh State Mining Corporation Ltd., E1/2, Area Colony, Bhopal-462 014. (6) Madhya Pradesh State Textile Corporation Ltd., 9-A, Civi Lines, Bhopal-460 002. (7) Madhya Pradesh Laghu Udyog Nigam, Maheswari Bhawan, Civil Lines Bhopal-462 002.

Other facilities and incentives include provision of lands, adequate water supply, assured supply of power in all regions of the state at a subsidised rate,subsidised rate of interest on the loans borrowed, sales tax subsidy/loan for new units, sales tax concessions to existing units for establishing new units, sales tax concession for substantial expansion of the existing units, Octroi exemption on plant. machinery, building, materials and raw materials for a period of 5 years. Transport subsidy, project cost reimbursement, group subsidy, state subsidy for installation of captive/power units, free preparation of feasibility reports and special concession extended by the State Forest Department for forest-based industries with a grant of a long-term lease of 25 years (for all forest produce except teak and bamboo).

Scope for further development : (i) *Basic Metal industries* : Iron and aluminium, ferro-manganese etc. (ii) *Metal-based industries :* Foundry and forging plant, structural fabrication agricultural implements and heavy electricals. (iii) *Chemical and allied industries :* e.g. super phosphate, alum, copper sulphate, ferrous sulphate, bleaching powder, refractories, cement, ceramics etc.

Districts eligible for concessional finance from the financial institutions and for 20 per cent deduction in income for calculating income tax liability : Bastar, Mandla, Sarguja, Seoni, Jhabua, Balaghat, Panna, Dewas, Mandsaur, Chindwara, Guna, Datia, Bilaspur, Sidhi, Betul, Raipur, Dhar, Tikamgarh, Rajgarh, Raigarh, Kharagaon, Shujapur, Shivapuri, Chattarpur, Rewa, More, Vidisha, Narasimhapur, Raisen Hoshangabad, Domoh, Rajnandgaon, Bhind Sagar, Ratlam and New Sehore.

Districts/Areas eligible for central subsidy : Datia, Raipur, Dewas, Shajpur, Rajgarh, Guna Dhar, Jhabua, Khargone, Mandsaur, Ratlam, Bhind, Datia, Morena, Shivpuri, Chattarpur, Sagar, Tikamgarh, Vidisha, Rewa, Sarguja and Sidhi.

MAHARASHTRA

Capital : Bombay. *Area of the State :* 3,07,762 sq.km. *Population :* 6,26,93,898. *Principal Language :* Marathi.

Industries : Maharashtra is one of the industrially well-developed states in India. Though traditional industries like textiles still dominate, other industries like engineering and chemicals have made a tremendous headway. There are several large-scale industries including textiles, ginning and pressing, silk, rayon, synthetic fabrics, vegetable products, general and electrical engineering, transport and transport equipment, petroleum refining, petro-chemicals, paints and varnishes. Various types of engineering goods, such as machine tools, steel and malleable iron castings, welding electrode, ball-bearings and agricultural implements are manufactured for domestic consumption as well as for export. Maharashtra leads in motion picture industry and is also a major sugar-producing state. It also leads in the sophisticated field of electronics. A number of defence and public sector industries are located in the state.

Infrastructure facilities : Industrial growth has been accelerated as a result of the following infrastructure facilities provided in the state : (1) *Land :* The state has developed a large number of industrial estates covering all the districts. 69 industrial estates have been approved by the state and by the end of 1978 MIDC had allotted 5,410 plots in addition to the 581 factories which were under construction. (2) *Power :* Maharashtra accounts for more than 1/6th of the total electricity consumption in the country.The power generation capacity in the state form hydel, thermal and nuclear sources was 6229 MW in 1984. The major hydro thermal and nuclear power projects are Koyna, Tarapur Tata Hydro, Nasik, Koradi, Bhusval, Paras and Khaparkheda, Ballarshah and Parli. (3) *Transport and Communication : Roads :* The total length of national highways, state highways and other state PWD roads in Maharashtra was 32,731 kms in 1978-79, of which 25,302 kms were surfaced and 7,429 kms unsurfaced. *Railways :* The state is served by 5 zonal railways, the central, the southern, the south central, the eastern and the western railways. These cover 5,242 kms within the state and also ink extensive markets outside. *Air Transport :* Seven aerodromes and an international airport at Bombay, air-link national and international markets with Maharashtra. *Ports :* Maharashtra has a coastline of about 720 kms dotted with some 49 minor ports and a major port at Bombay which is the largest port in the country handling bulk of the incoming and outgoing cargo.

Minerals : The state has a rich reserves of manganese ore, iron ore/coal, bauxite and limestone. Besides there are appreciable reserves of minerals such as dolomite, ilmenite, kyanite, clay, silica sand etc. There also exist deposits of copper, lead, zinc, tungesten, barytes, feldspar,soapstone,mica, asbestos, graphite and corrundum in small quantities. The mineral reserves are confined to the districts of Yeotmal, Nagpur, Bhandara, Kolaba, Kolhapur, Ratnagiri and Thane. A good quantity of salt is also produced in the state.

Facilities and Incentives : The industrial location in Maharashtra shows a very high concentration in the 120 mile corridor between Greater Bombay and Pune. Within the municipal limits of Greater Bombay alone is an industrial concentration, which accounts for 60 per cent of the total factory employment in the state and 70 per cent of the value added. The Bombay-Pune belt contains approximately 4/5 of the total factory employment in the state. Though the establishment of SICOM in 1966, paved the way towards the dispersal of industries in backward areas, the rest of the state by and large is industrially quite backward. To bring about the necessary balanced but accelerated growth, the following institutions have also been brought into existence : (1) The State Industrial and Investment Corporation of Maharashtra Ltd., ' Nirmal ', Nariman Point, Bombay-400 021. (2) Maharashtra Agricultural Development and Fertilizer Promotion Corporation Ltd. ' Mistry Bhawan ', D. Vachha Road, Bombay-400 020. (3) Leather Industries Development Corporation of Maharashtra Ltd., Bombay Life Building, 45, Veer Nariman Road, Bombay-400 023. (4) MAFCO Ltd., Mistry Bhavan, D. Vachha Road, Bombay-400 020. (5) Maharashtra Agro Industries Development Corporation Ltd., Rajan House, Near Century Bazar, Bombay-400 025. (6) Maharashtra Electronics Corporation Ltd., Plot No 214, Backbay Reclamation, Raheja Centre, 13th Floor, Nariman Point, Bombay-400 021. (7) Maharashtra Fisheries Development Corporation Ltd., Taraporewala Aquarium, N. Subhas Road, Bombay-400 002. (8) Maharashtra Industrial Development Corporation, Marol Industrial area, Mahakali Caves Road, Mulgaon, Andheri (East) Bombay-400 093. (9) Maharashtra Small-scale Industries Development Corporation Ltd., Krupanidhi, 9, W. Hirachand Marg, Bombay-400 038. (10) Maharashtra State Financial Corporation, New Excelsior Building, A. K. Nayak Marg, Bombay-400 001. (11) Maharashtra State Handlooms Corporation, 50, Central Avenue, Ahmad Manzil, Nagpur-440 010. (12) Mahrashrra State Mining Corporation Ltd., 5, Abhyankar Nagar, Nagpur-440 010. (13) Maharashtra State Powerlooms Corporation Ltd., Vashani Chambers, 47, New Marine Lines, Bombay-400 020. (14) Development Corporation of Vidarbha Ltd., Mahajan Building, Main Road, Sitabuldi, Nagpur-440 012. (15) Marathwada Development Corporation Ltd., Vikas Bhavan, Dr. R. Prasad Road, Aurangabad-431 001. (16) Western Maharashtra Development Corporation Ltd., Red Cross House, 11, Mahatma Gandhi Road, Pune-411 001. (17) Development Corporation of Konkan Ltd., Warden House, P. Mehta Road, Bombay-400 001.

Other Incentives and concessions : Santa Cruz Electronics Export Processing Zone(SEEPZ) : The Santa Cruz Electronics Export Processing Zone has been established with a view to develop the production of electronic products and increase their exports and augment the foreign resources of the country on the basis of 100 per cent export oriented programme. Entrepreneurs both Indian and foreign, intending to invest in a manufacturing operation in the zone are extended basic infrastructure facilities besides a variety of incentives and concessions which include : (i) duty-free import of capital goods and equipment from preferred sources, (ii) exemption from customers and additional (countervailing) duty on raw materials, components, consumables, spares, tooling and packaging materials imported : (iii) exemption from central excise duties and other levies on products manufactured within the zone (iv) capital goods, equipment, raw materials, components, spares, tooling and packaging supplies to the zone from the rest of the country treated as exports and eligible for all the concession such as cash assistance, duty drawbacks, etc., as are available to units in the domestic tariff area exporting out of India. Once a unit has been cleared by the SEEPZ administration, the Development commissioner renders all day-to-day help to the zone enterprises in setting up their units in the shortest possible time.

The New Package Scheme : The state government of Maharashtra introduced in 1979 a new package scheme of incentives. Under this scheme the state is divided into four groups. Group A covers developed area comprising the present Bombay and Pune Metropolitan region areas ; for industries located in this region, no incentive is offered. Group B covers fairly developed areas such as Nasik, Aurangabad and Karwar taluks. A large number of incentives are offered to industries located in these areas. Group C and D covers less developed and most backward areas. The maximum incentives are offered for starting industries in these areas. The following is the revised classification of taluks for purpose of the 1979 package scheme of incentives. *Group C :* Palghar Dahanu, Wada, Sahapur, Murbad, Vasai, Sudhagad, Roha, Alibag, Karjat, Khalapur, Malegaon, Niphad, Jalgaon, Bhusawal, Chopa, Bhadgaon, Erendol, Haveli, Khed, Mulsi, Mawal, Dhond, Baramati, Bhor, Ahmadnagar, Rahuri, Neware, Shevagaon, Sangamner, Shreerampur, Kopargaon, Karad, Phaltan, Sangli-Miraj, Solapur (North), Barshi, Malshiras, Shirol, Hatkanangale, Jalna, Parbhani Basmatnagar, Pathari, Nanded, Nagpur, Akola, Amravati and Chandrapur. *Group D :* Talasari, Jawahar, Mokhada, Mangaon, Mahad, Poladpur, Mhasala, Shivardhan, Murud, Ratnagiri, Guhagar, Dapoli, Mandangad, Khed, Chiplun, Sangameshwar, Lanja, Rajapur, Kankavali, Kudal, Sawantwadi, Vengurla, Malwan, Deogid, Igatpuri, Peth, Dingori, Surgana, Kawan,Baglan, Chandor, Nandgaon, Yewale, Sinnar, Dhule, Sakri, Navapur, Nandurbar, Talode, Shahada, Akkalkuva, Akarani, Shirpur, Sindkhed, Yawal, Raver, Edlabad, Jamner, Pochora, Parola, Amalner, Chalisgaon, Ambegaon, Junnar, Sirur, Indapur, Purandar, Velhe, Pathardi, Jamkhed, Karjat, Shrigonde, Parner, Akola, Satara, Wai, Khandala, Koregaon, Man, Khatau, Patan, Javli, Mahabaleshwar, Tasgaon, Khanapur, Atpadi, Jat, Kavathe, Mahankal, Walva, Shirola, Akkalkot, Solapur (South), Mohol, Mangalwedhe, Padharpure, Sangola, Karmala, Madha, Panhala, Kagal, Gadhinglaj, Chandgad, Ajara, Bhundargad, Radhanagari, Bhavada, Shahuwadi, Khuldabad, Kannad, Soegaon, Sillod, Bhokardan, Japharabad, Ambad, Paithan, Gangapur, Vijapur, Jintur, Hingoli, Kalampuri, Ganakhed, Partur, Beed, Georai, Majlegaon, Ambejogai, Keg, Patoda, Ashthi, Hadgaon, Kinwat, Bhokar, Biloli, Deglur, Mukhed, Kandhar, Usmanabad, Kalamb, Latur, Ahmadpur, Udgir, Nilanga, Ausa, Umarga, Tuljapur, Paranda and Bhum.

Places mentioned herein refer to Group D—Panchayat Samiti areas : Kamptee Hingna Katol, Narkhed, Saoner, Kalmeshwar, Mouda, Bhiwapur, Umrer, Kuhi, Parseoni, Ramtek, Buldhana, Chikhali Deulgaon, Raja Malkapur, Motala, Nandura, Jalgaon, Sangrampur, Khamagaon, Shegaon, Lonar, Mehekar, Sindkhed Raja, Barshitakli, Mangrulpir, Manora, Akot, Telhara, Balapur, Patur, Malegaon, Risod, Murtizapur, Karanja, Achalpur, Chandur Bazar, Daryapur, Anjangaon, Chandur Rly., Teosa Chikaldhra, Dharni, Morshi, Warud, Bhatukuli, Nandgaon-peth, Khandeshwar, Yavatmal, Babulgaon, Kalamb, Kelapur (Pandhar Kawada), Ghatanji, Ralegaon, Wani, Moregaon, Darva Digras, Ner, Pusad, Umerkhed, Mahagaon, Wardha, Seloo, Deoli, Arvi, Samudrapur, Karanja, Hinganghat, Tirora-Goregaon, Amgaon, Salekasa, Gondia, Bhandara, Paoni, Tumsar, Mohali, Sakoli, Deori, Arjun Moregaon, Lakhandur, Godpimpri, Warora, Bhadravati, Chimur, Brahamapuri, Sindevahi, Nagbhir, Gadchiroli, Chamorshi, Kukheda, Dhanora, Sironcha, Aheri, Etapalli, Rajpura and Mul.

List of area-wise incentives available in Maharashtra : Part I Incentive : Sales Tax Exemption : Under Part I a new industrial unit coming up in backward areas will not be required to pay sales tax on purchases of raw materials and on sale of finished products for periods as below computed from the date of effect specified in the Eligibility Certificate issued after commencement of production :

Area		*Small-scale units*	*For other units*
B	..	5 years	3 years
C	..	7 years	5 years
D	..	9 years	7 years

Part II Incentive : Sales Tax Loan : Existing units setting up new units in developing areas will get Part II incentive in the form of interest-free unsecured loan as under :—

Area		*Interest-free loan quantum*
B	..	25%of fixed assets limited to 3 years' sales tax with ceiling of Rs. 50 lakhs.
C	..	30% of fixed assets limited to 4 years' sales tax without ceiling.
D	..	35% of fixed assets limited to 5 years' sales tax without ceiling.

Special Capital Incentive : Special Capital Incentive is available in all B, C, and D areas to lustrial units, even if set up outside the MIDC/Government Co-operative estates. It will be ailable for units availing themselves of Part I of the scheme. The incentive will be given at the llowing rates :—

Area	*Incentive for New Units*
B	.. 10% of fixed assets with ceiling of Rs. 10 lakhs.
C	.. 12.5% of fixed assets with ceiling of Rs. 12.5 lakhs.
D	.. 15% of fixed assets with ceiling of Rs. 15 lakhs.

Incentive for expansion : Another feature of the 1979 Scheme is that incentives will be ailable to existing units for starting a new unit (called near-new unit) and or/undertaking expansion diversification at the same location. The rates of incentives will be as follows :—

) For those availing Part I incentive—

Special Capital Incentive :

Area	*Near-new unit*	*Expansion/Diversification*
B	.. 10% of new fixed assets without ceiling.	15% of fixed assets with ceiling of Rs. 10 lakhs.
C	.. 15% of new fixed assets without ceiling.	17.5% of fixed assets with ceiling of Rs. 12.5 lakhs.
D	.. 20% of new fixed assets without ceiling.	20% of fixed assets with ceiling of Rs. 15 lakhs.

(*Note :* These units will not get sales tax relief).

) For those availing Part II incentive—

Interest-free sales tax loan

Area	*Near-new unit*	*Expansion/Diversification*
B	.. 20% of new fixed assets limited to 3 years sales tax with ceiling of Rs. 50 lakhs.	20% of fixed assets limited to 3 years sales tax with ceiling of Rs. 20 lakhs.
C	.. 25% of new fixed assets limited to 4 years sales tax without ceiling.	25% of fixed assets limited to 4 years sales tax with ceiling of Rs. 25 lakhs.
D	.. 30% of new fixed assets limited to 5 years sales tax without ceiling.	30% of fixed assets limited to 5 years sales tax with ceiling of Rs. 30 lakhs.

evised Package Incentive Scheme of 1983 :

As per the revised incentive scheme of 1983 :

(1) the definition of a 'Pioneer Unit' has been enlarged now to include in its scope even big units, with capital investment of over Rs. 25 crores. Large scale units, not resource-based units, with fixed capital investment exceeding Rs. 25 crores which are set up after April 1, 1983, as well as any subsequent unit/units involving fixed capital investment of over Rs. 25 crores will be eligible for pioneer unit status in a taluka.

(2) Any number of really large units will qualify for pioneer status at a given location. Until April 1, 1983, only one unit was eligible for pioneer status in a taluka. Expansion of units will also be considered under the revised scheme.

(3) A new large scale unit, not being a resource-based unit with fixed capital investment exceeding the limit shown below and set up after 1-4-1983 for the first time in panchayat samiti areas and talukas where there is no existing unit with net fixed capital investment

exceeding the limit indicated, will be eligible for pioneer status subject to stipulated conditions :

Area :	*Limite of Fixed Capital Investment*
Group C :	Rs. 5 crores
Group D :	Rs. 2 crores.

N.B. : Eligibility of groups for securing sales tax and other concessions)

(4) The special capital incentive will be given as a grant to a new unit which is eligible to sales tax incentives as defined in the scheme. The scales of capital incentives are as follows:

New Unit (Area)	Quantum (for medium and large scale units)	Ceiling (Rs. in lakhs)
'B' and resource based units	15% of fixed capital investment	15
'C' and 'D'	20% of fixed capital investment	20
'Pioneer Units' (not being resource based)	25% of fixed capital investment	25
	(for Small scale units)	
'B' resource based units	20% of fixed capital investment	7.5
'C' and 'D'	25% of fixed capital investment	7.5

(5) The existing qualifying units, seeking to derive concessions for expansion under the new 1983 package scheme of incentives, should have production facilities, net additional fixed capital investment of Rs. 15 crores and above. Such additional fixed capital investment should be more than five times the gross fixed capital investment of the existing units as on April 1983.

(6) The eligible units under Part I of the 1969/1973/1976 schemes in respect of their unexpired period of eligibility will be allowed the benefits of sales tax deferral. The ceilings under the respective schemes shall, however, apply. The eligible units under Part II of the 1969/73/76 schemes in respect of sales tax loans sanctioned but not disbursed will be allowed the benefits of deferment of the sales tax liability of their existing units.

New unit set up in area	Quantum	Ceilings (Rs. in lakhs)
Group 'B'	25% of FCI of new unit or 3 years sales tax paid by existing unit whichever is lower	50
Group 'C'	30% of FCI or 4 years ,, ,,	75
Group 'D'	35% of FCI or 5 years ,, ,,	100
Pioneer unit	40% of FCI or 6 years ,, ,,	150

Scope for further development :

(*a*) *Chemical and Petro-chemical based industries*—Pthalic anhydride, Acetic acid, PVC resin based projects (leather cloth, footwear, PVC rigid pipes, PVC rigid sheets and methanol) LDPE and LDPE based products (plastic raw material), HDPE and HDPE based projects (HDPE box strippings, HDPE monofilament yarn, HDPE nets, HDPE woven sacks), Industrial alcohol (for synthetic rubber, LDPE, Polysterene, Butanol, Ethyl Acetate Butyl acetate, 2-Ethyl hexanol), Nitric acid, Nitrobenzene, cellulose nitrate, textile auxillaries (sodium alginate, sodium carboxy-methyl cellulose and ethylene oxide condenesates).

Availability of raw materials such as gas and crude, in Maharashtra from Bombay high have nhanced the prospects of development of petro-chemical and organic chemical industries in the state. he proposed USAR complex with an investment of Rs. 900 crores will make available the essential aw material for the important down stream products such as PVC based, LDPE based and HDPE ased items. Availability of aromatics from Bombay high also promises a big scope for the developnent of organic chemical industry. The USAR complex is likely to commence operation by 1987-88, roviding the necessary raw materials.

(*b*) *Engineering industries:* Automobile ancillaries (multi-cylinder fuel injection pumps elivery valves, wheels, shock absorbers, automobile tyres and tubes) steel forgings, steel castings, buildng ancillaries (glazed tiles, sanitary wares), ball and roller bearing industry, dairy machinery and quipment.

(*c*) *Power distribution and utilisation equipment industries:* Power and distribution transforners, transmission line towers, circuit breakers, power utilisation equipments like electric motors, lectric fans, component industries (molybdenum wires, lamp caps etc.)

(*d*) Aluminium extruded products, dry cells etc.

Category-wise industrial opportunities in Maharashtra:

Industrial Category	Suitable Area	Fields of Manufacture
Ferro Manganese Complex	Bhandara, Tumsar, Umrer upto Chandrapur.	Industry based on iron, coal, manganese, etc. power generation from coal.
Textile Complex	Nagpur, Wardha, and Amravati.	Natural fibre, cloth, textile machinery & parts, auxillaries for cloth finishing and synthetic fibre.
Agrobased	Entire state especially Pune, Nasik, Khandesh, Vidarbha, Sangli, Kolhapur, Ahmednagar, Ratnagiri, Parbhani, Nanded Beed and Osmanabad.	Rice, husk and bran oil, Vitamin B from rice bran, canning & processing of fruit and vegetables, sugar, alcohol, paper, starch, glue, animal feeds etc.
Forest based	Chandrapur, Nasik, Konkan, Nanded and Satara.	Timber, plywood, resins, saw dust, plant products, medicinal herbs, animal products etc.
Oil & Fats Complex	Akola, Buldana and parts of Khandesh.	Solvent extraction, purification, hydrogeneration, glycerine cosmetics, paints and varnishes etc.
Pharmaceuticals and Petrochemicals	Kolaba, Ratnagiri, Ahmednagar, Nanded Aurangabad.	Pharmaceuticals, petro chemicals, oil refinery, machinery to recycle pollutants.
Chemical Complex	Chandrapur and Thane.	Soda ash, potash, bromine, chlorine, sulphuric acid, nitric acid, dry distillation of coal, aromatic compounds and nitric chemicals.
Marine Industry Complex	Konkan Area.	Deep sea fishing, fish processing, cold freezing, fish oil, fish products, ship building, and repairing.
Ancillary Industry Complex	Sholapur, Miraj Pune, Ahmednagar, Alibag, Thane, Bombay, Nagpur and Nasik.	Plastics, furniture, leather goods, up-holstery, electronic equipment.
Tourism	Ahmednagar, Aurangabad, Sholapur, Satara Buldhana.	Hotels, fruits, flowers, clothes, transport.

Districts/Areas eligible for central subsidy; Ratnagiri, Aurangabad and Chandrapur.

MANIPUR

Capital : Imphal. *Area of the State :* 22,327 sq. km. *Population :* 14,20,953. *Principal language :* Manipuri.

Industries : The state has no large scale industry. Handloom weaving is the largest single cottage industry. Other cottage industries are sericulture, bamboo and cane articles, carpentry, blacksmithy, leather goods, edible oil crushing, rice milling, gur and khandsari. To accelerate the development of small-scale industries an industrial advisory board has been set up and the jurisdiction of Assam Financial Corporation has been extended to Manipur. At Takyelpat near Imphal, an industrial estate has been set up. Manipur Small Industries Corporation arranges the supply of scarce raw materials and marketing the finished products. Training-cum-product on centres in various trades have been set up both in the valley and the hill areas. Altogether 35 such training centres are functioning.

Infrastructure : (1) *Land :* Industrial estate at Takyelpat, 5 kms from Imphal, provides industrial sheds at concessional rates to small-scale units, 28 such sheds have been constructed and allocated. (2) *Power :* Loktak is the only major power project in the state. The total installed capacity of power both hydel and thermal in 1982 was 14.83 kW. (3) *Transport and Communication :* Manipur has no railway line and the only surface communication is the 215 km Imphal-Dinapur road. A national highway also passes through the state. A second road is now being improved which will link Cachar district of Assam and Manipur. The total road length in 1982 was 5,529 kms. Two land routes from Burma pass through the state. There are air services at regular intervals between Imphal-Silchar, Im hal-Calcutta and Imphal-Gauhati.

Minerals : High quality of limestone available at different places in the state, is sufficient for starting a small-scale cement unit.

Facilities and Incentives : Financial assistance is provided by the Directorate of Industries to individual artisans, entrepreneurs and co-operative societies in the form of loans and grants, technical advice. Assistance to the industrial units are also rendered by the Manipur Small Industries Corporation Ltd., etc., Imphal-795 001.

Scope for further development in the following industries : Wood working, agricultural implements, dairy products, agriculture-based industries paper, plywood, khandsari and sugar, fruit preservation, cycle parts, and automobile parts manufacturing plastic units, saw mills, matches, tannery, leather footwear, processing of rice, maize and chillies, bamboo and cane works, sheet metal works, cement and cement-based industries and aluminium utensils.

Districts eligible for concessional finance from the financial institutions and for 20 per cent deduction in income for calculating income tax liability : All the six districts—Manipur Central, Manipur East, Manipur North, Manipur West, Manipur South and Tengnoupal.

Districts/Areas eligible for central subsidy : All the six districts. The central transport subsidy scheme is applicable to Manipur.

MEGHALAYA

Capital : Shillong. *Area of the State :* 22,429 sq. km. *Population :* 13,35,819. *Principal languages :* Khasi, Garo and English.

Industries : In the organised sector, the main industrial units in the state are the cement factory at Cherrapunjee, plywood, soft drink, phytochemicals units in Burnihat and Cinnamon leaf distillation units in the southern reaches of Khasi Hills district. A timber treatment plant is being set up at Darugiri n Garo hills. Several mineral based industries are also coming up. Proposals are also afoot to set up ndustries based on lemon grass oil, ginger and oleo-resin. At present there are 644 small-scale ndustrial units in the state out of which 547 are in the Khasi hills, 43 in Garo hills and 4 in Jaintia hills.

Infrastructure : (1) *Land :* Besides the two established industrial estates at Shillong and Mendipathar in Garo hills district, an industrial area is also being developed at Burnihat, about 80 kms rom Shillong on the Gauhati-Shillong road. (2) *Power :* Meghalaya is endowed with a vast potential or hydro and coal based power projects. There are at present four hydel projects with a total installed apacity of 132 MW. (3) *Transport and Communication :* There being no railway or waterway facilities n Meghalaya, roads are the only feasible means of communication. The state has two national highways passing through it. The total length of roads in the state was 4,704 kms in 1982. Air services link Shillong with Calcutta, Agartala and Gauhati.

Minerals : The mineral wealth of the Khasi hills, Jaintia hills and Garo hills districts include coal, sillimanite, limestone, dolomite, fire clay, felspar, quartz and glass sand. Ninety-five per cent of India's total output of sillimanite is produced in the Khasi hills district. The Garo hills district has deposits of coal, limestone, fireclay and light coloured sandstone. The estimated reserves of coal in the state are about 1,200 million tonnes, limestone 2,100 million tonnes and clay deposits 10 million tonnes.

Facilities and Incentives available to Industries : Institutional assistance is rendered by the following government agencies: (1) The Meghalaya Industrial Development Corporation Ltd. (MIDC)-P.Box 9, Shillong-793 001. (2) Manipur Small Industries Corporation Ltd., Paona Bazar, Imphal, 795 001. (3) Forest Development Corporation of Meghalaya Ltd., Additional Secretariat buildings Shillong-793 001.

The MIDC offers a package of incentives to new entrepreneurs in the form of developed industrial plots, subsidised power tariff, concession in water royalty, preparation of feasibility and project reports free of cost for small-scale industries, financial assistance, refund of sales tax and price preferences of upto 15% to eligible industrial units for government purchases over goods manufactured and purchased from outside the state.

Scope for further development : Large and medium scale industries : Rayon grade pulp, cement, powder milk, sanitaryware, precipitated chalk, plywood and veneers, tannery for hides and skins, stealite wrist watches, phytochemicals, drugs and pharmaceuticals, coal complex industry, lime and hydraulic lime, prestressed concrete industry, pulp-cement roofing sheet, mining and processing of china clay and calcium carbide.

Small-scale industries : Dyestuffs and intermediates, laboratory chemicals, PVC soles and leather garments, glassware and ceramics, milling / grinding / drilling machines, ACSR, AACR conductors, automobile sheet metal pressed components, glow switches, PVC cables, super enamelled copper wire, electrolytic capacitors, ceramic capacitors plastic film capacitors, signal generator, car radios, PVC pipes, HDPE monofilament, PVC films and polypropylene film.

Districts eligible for concessional finance from the financial institutions and for 20 per cent deduction in income for calculating income tax liability : The entire state, consisting of the Garo, Khasi and Jaintia hills districts.

Districts eligible for central subsidy : The entire state, consisting of the Garo Khasi and Jaintia hills districts.

The Central transport subsidy scheme is applicable to Meghalaya.

NAGALAND

Capital: Kohima. *Area of the State:* 16,579 sq. km. *Population:* 7,74,930. *Common languages in usage:* Assamese and English.

Industries: There is a sugar mill with a crushing capacity of 1,200 tonnes per day at Dimapur. The Nagaland Forest Products Ltd., at Tijit has also gone into production. Handloom and sericulture are the important cottage industries. There are 1,567 small cottage industries at present.

Infrastructure: (1) *Land:* The state government has set up one industrial estate with water, transport and power facilities at Dimapur and another one is proposed at Mokochung. (2) *Power:* Total installed capacity up-to-date is 5.38 MW. (3) *Transport and Communication:* The state of Nagaland is entirely a hilly region with steep terrain. There is no facility of water transport, nor any railway within the state, except the railway line passing through Dimapur and hence roads are the only means of communication in Nagaland. By 1982, the total road length in the state was 6,358 kms.

Minerals: Deposits of coal, limestone, oil and traces of gold and platinum have been found in the state. The districts of Tuensang and Phek have vast reserves of high grade limestone (about 375 million tonnes at Mini in Teunsang district).

Facilities and Incentives: Institutional assistance is rendered by (1) Nagaland Industrial Development Corporation Ltd., Industrial Estate, P.B.No. 5, Dimapur-79712. (2) Department of Industries, Government of Nagaland, Kohima, six weaving-cum-production centres, three cottage industries-cum-production centres, five sericulture farms, one handicraft training-cum-production centre and three small-scale industries service centres also assist the entrepreneurs in setting up new units in the state.

Other facilities and incentives include allotment of factory sheds on concessional rent, subsidised power tariff, marketing facilities through the department of industries for facilitating purchase and sale of handloom fabrics and handicraft products, price preference upto 15% in Government purchases from local manufacturers, tools and materials on subsidised rates, technical and economic guidance for new units, financial assistance, grants-in-aid for cottage units and tax incentives.

There is scope for further development in industries based on forest and agricultural products, PVC pipes and fixtures and engineering workshops.

Districts eligible for concessional finance from the financial institutions and 20 per cent deduction in income for calculating income tax liability: Kohima, Mokokchung and Tuensang.

Districts eligible for central subsidy: Kohima, Mokokchung and Tuensang. The central transport subsidy scheme is applicable to Nagaland.

ORISSA

Capital: Bhubaneshwar. *Area of the State:* 1,55,707 sq. km. *Population:* 2,63,70,271. *Principal language:* Oriya.

Industries: Orissa is a very important mineral bearing state in the country. Important minerals found in the state include iron ore, manganese ore, limestone, dolomite, chromite, non-cooking coal, bauxite, graphite, china clay, nickel ore, fire clay and mineral sands. The total production of minerals in 1978 was about 148 lakh tonnes. Since 1947, 47 large industries have been set up in the state in the public and private sectors, most of them being mineral based. Steel, pig iron, aluminium smelting, ferro-chrome, ferro-manganese, cement, alloy steel casting, paper, fertiliser, chemicals, sugar, machine tools, textiles and jute twine manufacture are some of the major industries in the state.

A good number of major industrial ventures both in the state and central sectors are either under execution or under proposal. The central projects under execution are : fertiliser plant at Talchar, coke plant at Talchar, heavy water plant at Talchar, Indian Rare Earths Projects at Chhatrapur and wagon repairing shop at Mancheswar near Bhubaneswar. Infrastructural facilities are being developed for aluminium complex in Koraput district, a fertiliser plant at Paradeep, the second steel plant at Paradeep, and a ship-building yard also at Paradeep. Several other industrial projects have also been initiated by the Orissa Industrial Development Corpn. (IDCO) and the Industrial Promotion and Investment Corporation (IPICOL). Upto 1982 the total number of industries set up in large sector was 47, medium sector 125 and small-scale sector 13,722.

Infrastructure : (1) *Land :* 18 industrial estates located at Cuttack, Jagatpur, Kendrapara, Chowdar, Sambalpur, Jharsuguda, Rourkela, Kalinga, Berhampur, Pralakmandi, Dhenkanal, Talchar, Bhubaneshwar, Balasore, Takatpur, Barbi Bolangir and Jeypore, provide ready-made sheds with all facilities like power, water etc., IPICOL has also developed industrial areas in Bhubaneshwar, Dhenkanal, Paradeep, Raj Rangpur, Rai Guda, Talchar, Rourkela, Sunabeda, Chowdar and Jagatpur. (2) *Power* : The installed capacity of power both hydel and thermal, by August 1982 was 1134 MW and it is likely to go up to 1,474 MW by 1983-84. Orissa is a surplus state in the matter of power generation. (3) *Transport and Communication : Roads :* Orissa has 17,761 kms of roads of which 11,813 kms are surfaced. These roads connect almost all the industrial areas. *Railways :* The total length of railway line in Orissa was 1,960 kms in 1977. There are two main railway line, the Calcutta-Madras rail line passing through the coastal districts of Puri, Cuttack, Balsore, and Ganjam and the Calcutta-Bombay line passing through Sundargarh and Sambalpur districts. *Inland waterways :* Orissa has 1,043 kms of inland waterways. These serve the coastal plains providing the cheapest form of transport in the districts of Cuttack, Puri and Balasore. The inland water ways act as feeders to the railways and roads in the region and also provide a link with the sea. *Ports :* The major part at Paradeep which is also the biggest in the country, can receive bulk-carriers of 60,000 tonnes. It has a vast hinterland of 72,000 sq. kms. Other minor ports are Chandbali (Balasore) and Gopalpur (Ganjam).

Facilities and Incentives : Institutional assistance is rendered by (1) Industrial Development Corporation of Orissa Ltd. (IDCO), P.B.No. 78, Bhubaneswar-751 001. (2) Orissa Agro-Industries Corporation Ltd., Killa Maidan, Cuttack-753 001. (3) Orissa Mining Corporation Ltd., Bhubaneswar-751 001. (4) Orissa Small-scale Industries Corporation Limited, Killa Maidan, Cuttack-753 001. (5) Orissa State Financial Corporation, Arunodaya Market Building, Link Road, Cuttack-753 009. (6) Orissa State Handloom Development Corporation Ltd., 363, Sahid Nagar, Bhubaneshwar-751 007. (7) Industrial Promotion Investment Corporation of Orissa Limited (IPICOL), IPICOL House, Janpath, Bhubaneshwar-751 007.

The various facilities and incentives offered by these agencies include (*a*) full reimbursement cost of project/feasibility report, subject to a maximum limit of Rs. 3 lakhs; (*b*) 15% state subsidy on fixed capital investment subject to a limit of Rs. 15 lakhs; (*c*) other exemption on machinery, spare parts and raw materials for 5 years; (*d*) interest-free sales tax loan upto a limit of Rs. 25 lakhs including moratorium for repayment; (*e*) government land at nominal cost ranging from Rs. 625 per acre to Rs. 2,500 per acre and financial assistance for plant and machinery;(*f*) no water charges for 5 years;(*g*) no electricity duty on power for 5 years for contract demand on less than 110 kVA and interest-free loan for contract demand exceeding 110 kVA to 5000 kVA; (*h*) firm schedule of price and royalty for a period of 5 years for raw materials and their long-term supply; (*i*) housing scheme for industries; (*j*) single point contact forum and facilities for investment by non-resident Indians, technical consultancy services, provision of merchant banking and marketing facilities etc.

Scope for further development : The following industries can either be expanded or set up in the state :

Metallurgical and metal based-pig iron, mild steel, ferro-alloys, aluminium re-rolling, structural fabrication, steel castings, C.I. pipes, agricultural implements and industrial fasteners.

Machinery except electrical-diesel engines (stationary), machine tools accessories, portable tools, lifts, cranes, watches, clocks and timepieces and sewing machines. *Electrical Machinery :* Electric motors, house service motors, refrigerators, electric fans, electric lamps, radio receivers, power-driven boats and barges, livestock and forest based units, jute and coir based units, fertilizer, calcium-carbide, carbide based chemicals, dye-stuffs, phenol etc.

Districts eligible for concessional finance from the financial institutions and for 20 *per cent deduction in income for calculating income tax liability :* Bolangir, Mayurbhanj, Dhenkanal, Kalahandi, Balasore, Keonijhar, Koraput and Phulbhani.

Districts eligible for central subsidy : Kalahandi, Majurbhanj, Bolangir, Dhenkanal, Keonijhar and Koraput.

PUNJAB

Capital : Chandigarh. *Area of the State :* 50,362 sq. km. *Population :* 1,67,88,915. *Principal Language :* Punjabi.

Industries : Small-scale industries have great importance in the economy of the state. Sericulture, footwear, machine tools, bicycle parts, sewing machines and parts, plastic goods, pipes, nuts and bolts, wood and machine screws are some of the important small-scale industries. As on 31st March, 1984, there were 88,885 small manufacturing units in the state. Punjab also produces 70 per cent of the country's woollen hoisery. Through the efforts of the Punjab Industrial Development Corporation, several large and medium scale industries have been established in the manufacture of tractors, drycell batteries, polyester fibres, nylon, automobile tyres and tubes, synthetic detergents, scooters, breweries, fertilisers, steel billets, TV sets, electronic components and precision instruments. The Nangal fertilizer factory is a major Central Government undertaking in the state. In addition, five new projects have come up during the last two years. These are Biomedical Equipments Ltd., Records Ltd., Digital Industrial System Ltd., Electro-optical System Ltd., and Consumer Electronic items Ltd. Some of the biomedical equipments are being made for the first time in the country.

Infrastructure : (1) *Land :* The state government has developed 27 new industrial growth points in the state in addition to the expansion of the three existing industrial local points at Sahibzada Ajit Singh Nagar (Mohali), Dhanderi Kalan and Rajpura. (2) *Power :* The total installed capacity in different fields of power development by 1983-84 was 2,105 MW. (3) *Transport and Communication :* The state has a well developed network of roadways, which is around 33,134 kms of surfaced road length. *Railways and Airways :* Punjab is well served by railways and air routes connecting all important industrial towns within and outside the state.

Facilities and Incentives : The government institutional assistance is rendered by the following agencies : (1) Punjab Agro-Industries Corporation Ltd., SCO No. 315-16, Sector 35-B, Chandigarh, (2) Punjab Dairy Development Corporation Ltd., SCO No. 14-A, Madhya Marg, Sec-17C, Chandigarh, (3) Punjab Export Corporation Ltd., Kothi No. 117, Sector-18-A, A.B No. 20, Chandigarh. (4) Punjab Financial Corporation, No. 72-73, Sector 17-V, Chandigarh. (5) Punjab State Electronics Development Production Corporation Ltd., Bank of India Building, Sector 17-B, Chandigarh. (6) Punjab State Handloom & Textile Development Corporation Ltd., SCO No. 1128-29, Sector 22-B, Chandigarh. (7) Punjab State Industrial Development Corporation Ltd., SCO No. 54, 55, 56, Sector 17-A, Chandigarh. (8) Punjab State Small Industries Corporation Ltd., Batra Building, Sector-17, P.B.No. 11, Chandigarh. These agencies offer various facilities and concessions like allotment of development plots on deferred payment basis, power subsidy of upto 25% in electricity charges, provision of water supply, technical guidance to new entrepreneurs, subsidised fee for preparation of feasibility reports, financial assistance with liberal repayment facilities, preferential purchases of goods manufactured by the SSI units, tax concessions, etc. There is ample scope for development of the following industries in the state of Punjab.

Large and Medium Scale Industries : Agricultural machinery (except tractors and powertillers), alloy steels, aluminium castings, automobile ancillaries, dairy machinery, electric furnace, electric components, heavy earth-moving equipment, industrial air-conditioning and refrigeration equipment, industrial sewing machines and parts thereof, jute machinery, machine tools, medical surgical instruments, equipments and appliances, precision casting, plastic industrial machinery, steel pipes, and tubes, switchgear and control gear, textile machinery, barium carbonate, barium chloride, canned fruits and fruit products, essential drugs and pharmaceuticals graphite electrodes, nitrogenous fertilizers etc. *Small-Scale Industries :* Agricultural implements, electrical goods, automobile ancillaries, plastic goods, paper conversion products, leather and timber products, pressure diecastings, chromium and electroplating general machine shop etc.

Districts eligible for concessional finance from the financial institutions and for 20 per cent deduction in income for calculating income tax liability : Hoshiarpur, Bhatinda, Ferozepur, Gurdaspur and Sangrur.

Districts eligible for central subsidy : Hoshiarpur, Sangrur and Bhatinda.

RAJASTHAN

Capital : Jaipur. *Area of the State :* 3,42,239 sq. km. *Population :* 3,42,61,862. *Principal languages :* Rajasthani and Hindi.

Industries : Textiles, rugs and woollen goods, sugar, cement, glass, sodium producing plant, oxygen and acetylene producing units, manufacture of pesticides, insecticides are some of the major industries. Other enterprises include manufacture of caustic soda, calcium carbide, nylon and tyre cord and copper smelting. The total number of factories registered under the Factories Act, 1948, have increased from 168 units in 1952 to 7,377 units in 1984. There are nearly 90,000 registered small-scale industries in the state. Important handicrafts are marble work, woollen carpets, jewellery, embroidery, articles of leather and brass embossing.

Rajasthan accounts for the country's major output of lead and zinc concentrates, emeralds and garnets. Similarly 92 per cent of India's gypsum, 90 per cent of silver ore, 75 per cent of asbestos and feldspar and 20 per cent of mica are mined here. It has rich salt deposits at Sambhar and other places. Copper mines are situated at Khetri and Dariba.

Infrastructure : (1) *Land :* Large industrial areas/estates have been developed for setting up industries with all infrastructure facilities, fifty-four new industrial areas have been added in Rajasthan during the past three years bringing the number of such areas to 157 in August '84. (2) *Power :* The total installed capacity upto March, 1984 was 1713.17 MW. (3) *Transport and Communication :* The total road length in the state till March, 1984 was 48,422 kms consisting of 36,331 kms of surfaced and remaining 12,091 of unsurfaced roads. Rajasthan is served by 5,618 kms of railway, connecting all the important industrial towns within and outside the state. Jaipur, Jodhpur, Udaipur and Kota are the important airports in the state.

Facilities and Incentives : In order to provide various types of assistance towards encouraging industrialisation of the state, the following important institutions have been set up : (1) Rajasthan Financial Corporation (Udyog Bhawan, Tilak Marg, Jaipur). (2) Rajasthan Small Industries Corporation Ltd. (Udyog Bhawan). (3) Rajasthan State Agro Industries Corporation Ltd., Jaipur. (4) Rajasthan State Industries Development and Investment Corporation Ltd. (Udyog Bhawan). (5) Rajasthan State Dairy Development Corporation Ltd. 15, Uniara Garden, Jaipur. (6) RSMDC (Jaipur). (7) Rajasthan Bridge Construction Corporation. (8) Rajasthan Tanneries Corporation. (9) Rajasthan State Mines and Mineral Corporation (Udaipur).

Rajasthan State Industrial Development and Investment Corporation Ltd. (RIICO) which was established in 1969 has been entrusted with the task of acquiring, developing and allotting land in declared industrial areas and construction of sheds, etc.

Land in Industrial areas is allotted to new entrepreneurs on lease for a period of 99 years (renewable for a further period of 99 years) on very attractive terms and conditions, exemption from electricity duty and subsidised electricity tariff, assured water supply, financial assistance, tax concession, price preference on all purchases made by the government on products manufactured by local entrepreneurs, technical assistance and assistance in import of machinery and raw materials as also assistance in marketing and promoting of exports of the local products.

A new package of assistance is being offered by the State Government in its no-industry district of Sirohi—25 per cent subsidy, lower rate of interest, interest-free loan and lower promoter's contribution etc. Electronics industries will get overriding facilities, including land rebate of 20 per cent.

Identified Projects by RIICO—

Mineral Based

1. White Cement 2. Metallic Magnesium 3. Magnesium Compounds (i) Magnesium Oxide (ii) Basic Magnesium Carbonate, 4. Mini Cement (Portland) 5. Marble Tiles, 6. Marble Sawing 7. Agglomerated Marble 8. Granite Tiles 9. Mechanised marble mining 10. Wet mica grinding 11. Mica Paper & Mica Paper based products 12. Acid activated bleaching earth 13. Hydrated lime 14. Limestone powder 15. Bentonite grinding 16. Soapstone powder 17. Soapstone micronising 18. Dead burned dolomite & Tar bonded dolomite refractories 19. Sand bricks 20. Glass bonded mica 21. Micronised mica powder 22. Diamond cutting & polishing 23. China clay beneficiation 24. Silica sand beneficiation and resin coated silica sand plant 25. Lithopone from Barytes 26. Precipitated and Activated Calcium carbonate.

Ceramics

27. Injection glass vials 28. Sanitary wares 29. Ceramic wall and floor tiles 30. Porcelain table ware crockery 31. Ceramic fibres and its product 32. Stoneware Pipes 33. Ceramic clay tiles 34. Building bricks by mechanised process, 35. Fire clay sanitary ware.

Electronics

36. Plastic Film Capacitors 37. Color TV Tubes 38. Hard & Soft Ferrites 39. Magnetic Tapes 40. Potentiometers 41. Ceramic Rods 42. STD Barring Equipment 43. Multi-layer Ceramic Capacitor 44. Micrometers 45. Switchers 46. Tape Deck Mechanism 47. Button Cells 48. Quartz Crystals 49. Deflection Components 50. Loudspeaker, 51. Cassettes Assembly 54. Connectors 55. Microphone/ Cartidges 56. Floppy Disc. 57. Dot Matric printer 58. Floppy Disc. Drivers 59. Tantalum Capacitors 60. Audio Tape-Recorder 61. Technical Ceramics 62. Metallised Polyster film.

Automobile

63. Fuel Injection Equipment 64. Wheels 65. Dash Board Instruments 66. Pistons 67. Engine Valve 68. Spark (Glow plugs).

Machines and Plants

69. Steel shots for shot blasting 70. Industrial chains 71. Industrial valves and pumps.

Textiles

72. Shoddy blanket 73. Blanket finishing unit/Process house 74. Polypropylene filament Yarn.

Paper and Pulp

75. Capacitor tissue paper 76. Egg trays 77. Special copying paper.

Drugs and Pharmaceuticals

78. Vitamin B6, 79. Salycylic acid and Aspirin ;

Rubber and Plastics

80. PVC floor coverings 81. X-ray films.

The following 4 areas have been selected for this new package scheme : (1) Bhiwandi Industrial area (Alwar district) 76 kms from Delhi (2) Malviya Industrial area and Kanakpura Industrial area (Jaipur district) (3) Pilani Industrial Area (Jhunjhunu district) and (4) Mewar Industrial Area (Udaipur district). Electronic projects identified as having good scope in the above 4 industrial area : (*a*) Components : plastic film capacitors, ceramic roads for carbon film resistors, ferrite devices, magnetic tapes, tape-recorder components like tape deck mechanism, micro-motors and magnetic heads, electro-mechanical components, loudspeakers, components for computer (floppy discs), printed circuit boards, cassettes, microphones, cans and caps for resistors and capacitors and miniature cells (*b*) Consumer Electronics : Audio tape-recorders, video cassette tape recorders, rural radios (for SSI) CC TV and small size TV, (*c*) Communication equipment : telephone dials, P & T and non P & T modern telephone instruments, office electronics equipment and tele-processing equipment, small electronic exchanges. (*d*) Computer and Allied equipment : Micro-processor based components, peripherals of computers like printers, disc drives and computer soft ware development. (*e*) Control instruments and industrial electronics : Mining electronics, specialised test and measuring instrument for communication equipment and electronics in automobiles and other process industries.

Districts eligible for concessional finance from the financial institutions and for 20 *per cent deduction in income for calculating income tax liability :* Jalore, Banswara, Dungarpur, Nagaur, Churu, Alwar, Tonk, Udaipur, Jodhpur, Jhunjhunu, Sikar, Sirohi, Bhilwara, Jhalawar, Jaisalmer and Barmer.

Districts eligible for central subsidy : Alwar, Jodhpur, Bhilwara, Churu, Nagaur, Udaipur, Jaisalmer, Sirhoi, Barmer, Banswara, Dungarpur, Jalore, Jhalawar, Jhunjhunu, Sikar and Tonk.

No-industry Districts : Sirohi, Jaisalmer, Barmer and Churu.

SIKKIM

Capital : Gangtok. *Area of the State :* 7,096 sq. km. *Population :* 3,16,395. *Principal languages :* Lepcha, Bhutia, Nepalai, Limbu and Hindi.

Industries : There is a predominance of cottage industries and handicrafts in which the people of Sikkim are talented. These include cotton and wool weaving, carpet making, wood carving, silver work, hand-made paper and bamboo. In recent years, a number of small-scale industries have been set up producing briquets, matches, washing soap, aluminium works, etc. A multi purpose state-level Industrial Development Investment Corporation has been established with the object of accelerating industrial development in the state by providing financial assistance to small and medium scale industries. One industrial training institute has been set up at Rangpo which imparts training to local youth. The Sikkim Mining Corporation, Rangpo produces copper, lead and zinc. High grade deposits of gold, silver copper and zinc in combined form have been located and the deposits are estimated to be around 20 lakh tonnes. The copper mine of Dikchu is under-exploration. The Government Institute of Cottage Industries at Gangtok, encourages local handicrafts. Important industrial ventures include the fruit preservation factory at Singtam, the distillery near Rangpo and tannery at Majitar, Sikkim jewels and Sikkim electronics at Gangtok and a wood working centre at Bordang. A watch assembly unit in Gangtok is another industrial venture started in collaboration with HMT.

Infrastructure : (1) *Power :* Sikkim has tremendous water power potential. There are four hydel power station at Mangan, Rimbi, Rohtakand, Sangkhola. The total installed capacity is 17 MW. (2) *Transport and Communication :* Road transport is of crucial importance in this mountainous state. The total road length is around 1,288 kms. Almost every part in Sikkim is within easy access from Gangtok. There are 48 major bridges in the State. The nearest airport is Bagdogra (121 kms) and the nearest railway station is Siliguri (112 kms).

Facilities and Incentives : As the entire state has been declared industrially backward, maximum facilities are accorded to the local entrepreneurs, special concessions are also extended by the specialised financial institutions and also by the Central Government for setting up industries in the state.

Scope for further development : There is good scope for setting up units in the fields of agriculture based, horticulture based, forest based and mineral based industries ; the state also offers good potential for development of tourism.

Districts eligible for concessional finance from financial institutions and for 20 per cent deduction in income for calculating income tax liability : All the four districts of Gangtok, Mangaon, Gyalshing and Namchi.

Districts eligible for central subsidy : All the four districts of Gangtok, Mangaon, Gyalshing and Namchi.

TAMIL NADU

Capital : Madras. *Area of the State :* 1,30,058 sq. km. *Population :* 4,84,08,077. *Principal Language :* Tamil.

Industries : With its broad-based and well-balanced industrial complex, Tamil Nadu today occupies a prominent place in the industrial map of India. Large and medium scale units and technology-oriented small-scale industries have emerged in various parts of the state. The growth and dispersal of industries all over the state is largely due to the infrastructure and other incentives, including financing and training facilities, offered by the state.

These incentives have attracted increasing investment by private sector and significant progress has been achieved on a wide range of industries like textiles, metal and metallurgical products, chemicals, agricultural equipments, mechanical, electronics and engineering goods, cement, sugar, paper, paper products, iron and steel, railway wagons and coaches, automobiles and automobile ancillaries etc. The number of units registered under the Factories Act, has gone up from 6,200 in 1970 to 8,000 in 1977 and to 11,000 by the end of June 1982.

Apart from the large number of state undertakings, the central investment in Tamil Nadu accounts for about 4.1% of the total investment in such undertakings. The role played by the public sector undertaking in industrialising the state of Tamil Nadu has been significant. Among the central projects, Neyveli Lignite Integrated Scheme occupies the pride of place. The other public sector projects like the Bharat Heavy Electricals Ltd., at Trichy, Hindustan Teleprinters Ltd., Surgical Instruments, The Integral Coach Factory, Heavy Vehicles Factory, the Hindustan Photo Films Manufacturing company Ltd., etc. produce a variety of engineering and chemical products. The Salem Steel Plant is another prestigious public sector undertaking at Salem.

The Government of Tamil Nadu has also been playing an equally significant role by offering goods and services, covering a wide range : tooling, die castings, forgings, galvanized towers, heavy building structures, enamelled copper wires, wood and steel furnitures, special grade foundry items, leather and leather goods, wool processing, deep-well hand pumps, spirit-based products such as french polish gasket shellac and picture varnish, machine tools and assembling of wrist watches.

The small scale sector has been given a priority treatment by the state. The Tamil Nadu Small Industries Development Corporation (SIDCO) is exclusively concerned with the growth and development of small scale industries in the state. In order to adequately assist an ' artisan ' type of entrepreneur as well as those seeking ' self-employment ' opportunities, a scheme of tiny sector shed construction has been taken up in a big way. There is thus an industrial estate or a tiny shed complex not only in each revenue division of the state but also in most of the taluks. A wide range of products like engineering goods, sensitive equipments, chemicals and fertilisers, electrical and electronic items, agro-industrial products, instruments and appliances, calculating machines etc. are manufactured in the small scale sector. An important feature of the small industry movement in Tamil Nadu has been the organised development of ancillary industries. More than 800 small scale ancillary industrial units catering to the ancillary needs of the established small scale and large scale industries, manufacture precision turned components, fabricated part, packing materials, jigs and fixtures, tools, pressure die castings, steel forgings etc. The total investment in these units is about Rs. 3,000 million. The state is an important exporter of tanned hides and skins, leather goods, cotton piece-goods and yarn, tea, coffee, spices, engineering goods and tobacco.

Minerals : In spite of its deficiency in key minerals, Tamil Nadu has sizable reserves of lignite magnesite, limestone, bauxite, gypsum, silmenite, chromite and iron ore. Salt contributes about 50 per cent of the total mineral production of the state followed by limestone and magnesite with 20 per cent and 11 per cent respectively. Output of metallic ores is confined to small quantities of bauxite. Small deposits of several other minerals which also occur in the state are : graphite, mica, apalite, granite, copper, uranium, feldspar and barytes. The recent oil found in the Cauvery Palk Strait region seems to hold much promise for further development of the state.

Infrastructure : (1) *Land :* The state has 47 industrial estates where infrastructural facilities have been provided so as to create a conducive environment for the growth of industries. Industrial estates in Tamil Nadu are divided into five categories : (1) Conventional industrial estates - where different types of industries are located, (2) Functional industrial estates—where certain special types of industries are located, (3) Ancillary industrial estates—which cater to the needs of the large-scale industries , (4) Co-operative industrial estates with built-up factory units of different sizes and (5) Private industrial estates set up with the assistance of leading private industrialists of the area.

There are 31 conventional industrial estates consisting of 753 sheds and 1,117 labour tenents. Tamil Nadu has been a pioneer in the establishment of functional industrial estates. There are 7 such estates designed to offer integrated production and service facilities required for specific types of industries covering leather, ceramics, electricals, food and fruit-based, electronic instruments, drugs and pharmaceuticals. Of the three ancillary industrial estates, the one at Thiruverambur near Tiruchirappally and the other situated in Pudukottai district cater to the needs of the BHEL unit at Trichy while the third situated at Vadalur caters to the ancillary needs of the ceramic complex. There are at present two private and five co-operative industrial estates.

Madras Export Processing Zone : The Export processing zone coming up near the Meenambakkam Air Port in Madras, is expected to go on stream by the end of 1985. Sufficient support facilities have been made in the matter of selection of site, provision of water and power supplies, road communication facilities, container terminal etc. About 5 MW of power is now available from the state grid. The power plan for the zone includes the installation of two captive gensets of 5 MW each, besides a 230 KV station to generate 30 MW. The captive units are expected to start functioning from January, 1986. The MEPZ will have an exclusive area earmarked solely for export of gems and jewellery, diamond processing and pearls, synthetic and immitation jewellery. Import of raw materials, capital equipment, and machinery will be allowed duty free. There is also a proposal to allow units in domestic tariff areas supplying materials and services to units within the zone to write off their taxes under the ' deemed exports ' category. The MEPZ would in all house about 350 units over an area of 400 acres. This multi-product zone which is located in the heart of the city is expected to emerge as a model for the entire South-east Asia. Of the 117 applications received, 50 have been cleared so far—garment units (20 proposals), engineering (7), electronics and electricals (10), stainless steel, (2) jewellery, (2) precious stones, (1) leather goods, (2) drugs, (3) soaps and detergents (2) and ophthalmic spectacle frames (1).

(2) *Power :* The installed capacity of the state unit is 3,344 MW. This is expected to go up to 5,500 MW by 1989-90. At present 28 per cent of the energy is consumed by the agricultural sector and 50 per cent by industries. With the near saturation level reached in agricultural sector, the bulk of the additional energy produced in the Seventh Plan period will be available for industrial expansion. A massive 35 per cent of the overall outlay of Rs. 5,750 crores has been set apart for power sector in the State's Seventh Plan. The Government plans to implement by 1980-90, the new thermal projects at North Madras and Mettur besides the expansion programme at the Tuticorin thermal plant. With the commissioning of the second 235 MW unit of the atomic energy plant at Kalpakkam and the proposed establishment of the second thermal station at Neyveli, the state is expected to be in a comfortable position to meet the increasing demand by the industrial units. In addition, a number of other sources of energy such as micro hydel plants, ocean thermal energy schemes, solar energy development etc., are also being contemplated.

(3) *Transport and Communication :* Tamil Nadu, has a well developed network of roads and other transport facilities. The total road length (national highways, state highways and other state PWD roads) was 35,138 kms in 1980. The state has well laid railway net work connecting all important towns and commercial centres with 3,766 kms of route length. The proposed conversion of the Karur—Tuticorin sector into broad-gauge will enhance the movement of goods traffic down south.

(4) *Airports :* The four important centres of industry, trade, business and banking in the state viz. Madras, Coimbatore, Madurai and Trichirapally are on the air map of India.

(5) *Ports :* The state has a coastline of 1,000 kms and is serviced by the major port of Madras and three intermediate ports of Tuticorin, Cuddalore and Nagapattinam, in addition to seven minor ports. The Madras port is ideally situated to handle large containers.

Facilities and Incentives : Institutional assistance : Tamil Nadu has an array of state agencies to help entrepreneurs. They are : (1) The State Industries Promotion Corporation of Tamil Nadu (SIPCOT), 'Meco house', 114/1, Anna Salai, Madras-600 002, (2) The Tamil Nadu Industrial Investment Corporation (TIIC), 'Arul manai', 27, Whites Road, Madras-600 014, (3) Tamil Nadu Industrial Development Corporation (TIDCO), 150-A, Anna Salai, Madras-600 002, (4) Tamil Nadu Small Industries Development Corporation (SIDCO), Greams Road, Madras-600 006, (5) The Tamil Nadu Handicrafts Development Corporation Ltd., 'Poompuhar', 2-A, College Road, Madras-600 006. (6) Tamil Nadu Agro Industries Corporation Ltd., (7) Tamil Nadu Dairy Development Corporation Ltd., 15, Spur Tank Road, Chetpet, Madras-600 031. (8) Tamil Nadu Fisheries Development Corporation Ltd., 65, Greams Road, Madras-600 006, (9) Tamil Nadu Handloom Finance & Trading Corporation Ltd., 169, North Usman Road, T. Nagar, Madras-600 017. Additionally other institutions such as the IDBI, ICICI, IFCI etc., are also rendering assistance to prospective entrepreneurs.

The Tamil Nadu Handloom Weavers' Co-operative Society Ltd., (popularly known as Co-optex), established with the objective of organising and promoting the handloom industry in Tamil Nadu on a commercial basis undertakes (1) supply of yarn produced by the co-operative spinning mills to primary weavers' co-operative societies, (2) procurement of handloom cloth from weavers co-operative societies and (3) marketing handloom cloth through its 583 sales outlets spread all over India. Of the 1,320 primary weavers' co-operative societies in Tamil Nadu, 65 societies produce silk sarees and dhoties to the extent of 56,83,000 metres, valued at Rs. 1,411 lakhs. Steps are being taken by the sericulture wing of the Industries department of the Tamil Nadu government to increase, the production of raw silk. In order to make available gold zari, an important ingredient of silk weaving, at reasonable price, the Tamil Nadu Zari Ltd., with an installed capacity of 1,000 marcs per month has been set up at Kancheepuram so as to manufacture and supply zari to the silk weavers' co-operative societies. Another salient feature to be noted is that the co-operative movement especially in the handloom sector has gained good popularity in the state of Tamil Nadu, covering 52 per cent of the weavers.

The Tamil Nadu Small Industries Corporation (SIDCO) offers various facilities to small scale units in the 47 industrial estates. It undertakes construction of sheds both on rental as well as on hire-purchase basis. Tiny sector shed construction is another novel assistance undertaken on a big way. SIDCO is now implementing the other supporting schemes such as Central/State Capital Investment subsidy schemes which covers respectively 33 taluks and 24 taluks, identified as backward, scheme of power tariff, subsidy to L T industrial consumers, interest-free sales tax loan, margin money assistance scheme for the rehabilitation of sick industrial units etc. Enlargement coverage under the state capital investment subsidy scheme has been announced by state government with a view to promote and develop specific areas of industrial activity such as electronics, drugs and pharmaceuticals, automobile accessories etc. The agency further offers marketing assistance through identification of products that are in short supply and those in demand, listing the items that are purchased in bulk by the DGS & D for the benefit of the manufacturing SSI units and through systematically arranged 'buyers-sellers meet' not only for general products range but also for specified products range.

The Government of Tamil Nadu has further liberalised the existing incentive schemes. These special concessions are (*a*) the enhancement of existing ceiling on interest free sales-tax loan to industries (*b*) development of new industrial complexes at five new areas in the state where new industrial units will enjoy the facility of exemption from power cut for the first five years, and (*c*) extension of subsidy for creation of certain new industries in the fields of electronics, drugs and automobile component units. The state government has raised the investment limit for small scale industries in the state from Rs. 20 lakhs to Rs. 35 lakhs and for ancillary industries from Rs. 25 lakhs to Rs. 45 lakhs.

The other facilities rendered by the government agencies include, free supply of water upto 400 gallons per day, subsidised power tariff, preparation of project feasibility reports, financial assistance by granting loans upto Rs. 2,00,000 towards purchase of land, machinery, equipment, construction of factory premises, etc., with easy repayment terms, price preference of upto 15 per cent in government purchases, for the products of SSI units in the state and 100 per cent financial assistance to technocrats and educated unemployed for the purchase of machinery and worksheds.

Electronics Industry : The State Government has set a capital formation target of Rs. 300 crores for the electronics industry during the Seventh Plan. This is expected to produce annually electronic goods of Rs. 1,000 crores value by the end of the plan period. In this respect, the state owned Electronic Corporation of Tamil Nadu (ELCOT) has been strengthened and provided with resources to launch a massive programme for the development of the industry in the state. It has secured approvals for floating 19 joint-ventures covering practically the entire spectrum of the electronics industry.

To encourage the electronics industry, the Government has issued orders to reduce the sales tax on electronic items from 12 per cent to 10 per cent. Other measures includes the establishment of a raw materials depot at the Electronics estate in Madras, a common test facility centre at the industrial estate at Coimbatore, an electronic product development and training centre at Tiruchi, Upgradation and modernisation of the data bank at the electronic estate in Madras, setting up an exclusive electronic industrial estate for women at Nandambakkam in Madras, five electrical and electronic industrial cooperatives in other places, establishment of an industrial estate at Salem, quality control centres at Madurai, Coimbatore and Madras and a training centre at Tiruchi.

An ambitious electronics project is being currently set up by several non-resident Indians in the U.S., on a 400 hectare plot in Kodanad, about 4 kms. from Kotagiri in Nilgiri district.

Scope for further development : The state offers good scope in the following industries : Petrochemical industries, automobile and its parts, ceramics, commercial office equipments, electrical equipments, explosives, industrial and domestic appliances, non-ferrous metals, paints and enamels, paper, rubber and rubber products, steel and steel products, alcohol-based, electronics, dyes, drugs, and pharmaceuticals etc.

The extraction of marine chemicals and conversion of common salt are other promising areas for setting up of sea based small industries at Tuticorin. The Small Industries Service Institute (SISI) has identified the following as possible areas of production—dairy salt, cattle licks salt, iodised salt, free flowing table salt, light/heavy basic magnesium carbonate, potassium chloride, potassium chionate, magnesium sulphate etc. The SISI provides elaborate model project profiles for the production of the above marine chemicals, besides similar profiles for possible ancillary industries to feed the different large and medium units in the Tuticorin area.

List of Industrial Estates developed by SIDCO in the state of Tamil Nadu : Arumbakkam, Guindy, Ambattur, Madhavaram, Kancheepuram, Villivakkam, Kodungaiyur, Maraimalainagar, Arkonam, Katpadi, Thiruvannamali, Ranipet, Cuddalore, Vadalur, Kumbakonam, Nagapattinam. Thanjavur, Pillairpatti, Ariamangalam, Tiruverumbur, Karur, Thuvakudi, Pudukottai, Mathur, Salem, Namakkal, Mettur, Tiruchenkodu, Dharmapuri, Krishnagiri, Hosur, Erode, Kurichi, Tirupur, Madurai, Dindigul, Theni, Batlagundu, Kappalur, Karaikudi, Sivaganga, Paramakudi, Virudhunagar, Kovilpatti, Pettai, Nagercoil and Marthandam.

SIDCO's programmes for provision of developed plots and sheds including establishment of new industrial estates cover the following centres : Ambattur, Guindy, Gummidipoondi, Kurichi, Karur, Dindigul, Hosur, Kappalur, Madhavaram, Ranipet, Maraimalainagar, Udagamandalam, Vadalur, Thiruporur, Ambur, Thiruvallur and Ponneri.

Districts eligible for concessional finance from the financial institutions and 20 per cent deduction in income for calculating income-tax liability : South Arcot, Tiruchirapalli, Madurai, Ramanathapuram, Kanyakumari, North Arcot, Thanjavur, Dharmapuri and Pudukottai.

Districts/Areas eligible for central subsidy : (1) Ramanathapuram district (Taluks—Ramanathapuram, Madukulathur, Paramakudi, Sivaganga, Thiruvadani, Thirupathur, Aruppukottai, Sattur and Srivilliputhur), (2) Dharmapuri district (Taluks—Dharmapuri, Harur, Hosur, Krishnagiri and Uthan-

h

giri), (3) Madurai district (Melur, Dindigul, Nilakottai, Thirumangalam, Usilampatti and Vadasandur), (4) North Arcot district (Taluks—Tirupattur, Vaniyambadi, Vellore and Walajapet) and (5) Tiruchirapally district (Alangudi, Kulathur and Thirumayam).

TRIPURA

Capital : Agartala. *Area of the State :* 10,486 sq. kms. *Population :* 20,53,058. *Principal Languages :* Bengali, Tripuri, Kok Borak, and Manipuri.

Industries : Handloom is the biggest industry in the state so far as employment potential is concerned. There are about 1.25 lakh of which about 8,000 are in commercial operation. Including the co-operative societies this handlloom sector employs about 1.5 lakh weavers. Tea is the next important industry in terms of employment. This sector employs over 11,000 people producing 47 lakh kg. of made tea annually. Sericulture is also a growing industry in Tripura and it has a very bright future. Already more than 2,000 people have taken to sericulture cultivation. Apart from these there are other industries like cane and bamboo handicrafts, Khadi and various other SSI units. The number of private sector industries under small scale are about 2,600. There is a jute mill in the State under state sector which employs over 2,000 people.

Infrastructure : Today Tripura has an all weather road net work of over 5,000 kilometers. Tripura also finds a place in the railway map of the country. The nothern most town Dharmanagar is connected by rail link. Railway line is being further extended upto Kumarghat which is about 60 kms from Dharmanagar. There is an installed capacity of 16 MW of power. Another 10 MW gas fired thermal power plant at Baramurah is expected to become operational soon. Power is however freely available through Assam grid. The Department of Electricity have drawn up programmes to further augment the installed capacity of power. *Industrial Estates* : There are 4 well developed Industrial estates in the State. Another Industrial estate is coming up near Agartala.

Resources : Agriculture forms the most important sector of Tripura's economy. Apart from paddy there are other crops like Jute, Mesta, Cotton, Wheat, Tea, Sugar cane etc. The State also produces large quantities of pineapple, guava, oranges, jack fruits etc. Based on these the following industries have good scope of development. Solvent Extraction plant, Ginning mill, Cotton seed crushing, Absorbent cotton, Fruit processing plants etc. *Forest :* Rubber based industries. It is expected that in the near future Tripura will produce about 4,000 MT of raw rubber per year. There are other prospective industries like citronella, commercial plywood, wooden electrical accessories etc. At least 64 varieties of good quality commercial wood are grown in Tripura. *Minerals :* There is an estimated deposit of about 1.20 lakh MT of coloured plastic clay in Tripura. This opens up a new horizon for industries like Glazed potteries. About 2.1 lakh MT of silica deposit is also reported. Thus hollow glass industries have a good prospect.

Facilities and Incentives : All the three districts of Tripura have been declared as No Industry Districts. Apart from the Central Incentives the State Government offers a very liberal package of incentives to entrepreneurs intending to set up industries in the State. These incentives in a nutshell are : (*a*) Capital investment subsidy, (*b*) Transport subsidy, (*c*) Loans, grants, concessional finance, (*d*) Interest subsidy, (*e*) Refund of stamp duty, (*f*) Reimbursement of consultancy fee for drawing up project scheme, (*g*) Liberalised import of machinery and raw materials, (*h*) Marketing assistance, (*i*) Price preference, (*j*) Income Tax relief, (*k*) Managerial subsidy, (*l*) Wages subsidy (*m*) Grants for purchase of implements, (*n*) Free training facilities, (*o*) Subsidy for rent of land, (*p*) Subsidy for rent of factory shed, (*q*) Power and water consumption subsidy, (*r*) Land Development subsidy, (*s*) Subsidy for captive power generating sets, (*t*) Sales Tax exemption etc., (*u*) Power subsidy and (*v*) Interest free loan for construction of factory sheds.

Districts eligible for concessional finance : All the 3 districts.

Districts eligible for Central subsidy : All the 3 districts.

UTTAR PRADESH

Capital : Lucknow. *Area of the State* : 2,94,411 sq. kms. *Population* : 11,08,62,013. *Principal Language* : Hindi.

Industries : Uttar Pradesh is one of the principal sugar producing states. Handloom industry is the largest decentralised cottage industry in rural and semi-urban areas. Cotton textiles, woollen textiles, leather and foot-wear, edible oils, hydrogenated oil, industrial machinery, machine tools, electrical machinery and electrical accessories, radio sets and transistors, television sets, cycle and cycle parts, foundries, jute textiles, glass and glass products, railway equipment, chemicals, fertilisers, cement, cables and conductors, scientific instruments, tractors, steel pipes, etc., are the various major industries that have come up in the state. A number of big public sector undertakings have been set up in the state, the BHEL unit at Hardwar, the Indian Drugs and Pharmaceuticals at Rishikesh, the Diesel Locomotive factory at Varanasi, Singrauli Coal Fields, Singrauli, Indian Telephone Industries, Naini and Rae Bareli, the Hindustan Aeronautics Ltd. at Lucknow, Bharat Electronics Ltd. Ghaziabad, Scooters India Ltd., Lucknow etc. The number of registered factories have increased from 3,673 in 1970 to 5,784 in 1982.

The traditional handicrafts are silk fabrics, metal-ware, wood work, ceramics, stone work dolls, artistic leather articles, perfumery, bamboo products and musical instruments. Special attention has been given to khadi and village industries programme in the state. Under the rural growth centres programme 60 growth centres have been taken up and 2,875 units have been registered since the inception of the scheme in March, 1978. As a result of various promotional programmes, the number of SSI units have risen from 3,107 in 1960-61 to 95,847 in 1983-84. There are 69 industrial estates (excluding 10 Harijan industrial estates) functioning in the state and seven more have been added newly in 1981.

Infrastructure : (1) *Land* : Industrial plots are available in industrial areas developed at Ghaziabad, Hardwar, Bareilly, Lucknow, Kanpur, Gorakpur, Naini (Allahabad), Unnao Sandilla (Harodi), Rae Bareli, Sikandrabad (Bulandshar) and Varanasi. Industrial plots are also being developed at Agra, Jhansi, Khurja, Partrapur and Loni. The U.P. Directorate of Industries has developed industrial estates, with developed land and built-up sheds in most places. In general there are six types of sheds of different sizes in these estates. (2) *Power* : The total installed capacity of power including both hydel and thermal was 3,694 MW in 1982-83. An atomic power station is being set up at Narora in Bulandshar district. Work on three more thermal power schemes—Poricha (Jhansi), Anpara (Mirzapur) and Tanda (Faizabad) is in hand. (3) *Transport and Communication* : The state has a good network of communications and every small and big town is now linked with excellent road and rail transport. The total road length was 58,597 kms. in 1980. It has the longest railway lines in the country, with a total route length of 8,661.23 kms of railway line. Of these 5,389.82 kms. are broad gauge and 3,269.40 kms. are of metre gauge. There are a number of airports in the state, at Lucknow, Kanpur, Varanasi, Allahabad, etc., connecting almost all important cities within and outside the state.

Minerals : Large reserves of silica sand exist in the state and it has a share of 80 per cent in the all India production. The state has the second largest reserves of limestone in the country—about 7,800 million tonnes out of about 20,900 million tonnes. These are found suitable for cement, sugar, paper and other chemical industries. High dolomite suitable for use in flux in the steel industry is also available. Singrauli coal field in Mirzapur district is supposed to be the biggest coal seam in India, where reserves of about 1,000 million tonnes of second and third grade coal are available. A large area in Bundelkhand has vast reserves of bauxite, copper, cobalt and iron ore. Magnesite reserves are estimated at 10 million tonnes. A potential reserve of nearly three million tonnes of non-plastic fire-clay has been explored in Mirzapur district. The state has substantial reserves of pure white marble suitable for making white and coloured cement, chips and chemical lime. About 75 per cent of the total glass sand available in India is produced in U.P.

Facilities and Incentives : Institutional assistance is provided by the following state agencies : (1) State Directorate of Industries, Consultancy Bureau, Udyog Bhavan, G.T. Road, Kanpur-208 002, (2) The Pradeshiya Industrial and Investment Corporation of U.P. Ltd., Jawahar Bhavan Annexe Ashok Marg, Lucknow-226 001, (3) U.P. Export Corporation Ltd., B-27, Sarvodaya Nagar, Kanpur-

208 005, (4) U. P. Financial Corporation 14/88, Civil lines, Kanpur-208 001, (5) U.P. Industrial Consultants Ltd., Handloom Bhawan, D.I. Compound, G.T. Road, Kanpur-208 002, (6) U.P. Small Industries Corporation Ltd., B-15, Sarvodaya vagar, Kanpur-208 005, (7) U.P. State Agro Industrial Corporation Ltd., 22, Vidhan Sabha Marg, Lucknow-226 001, (8) U.P. State Brassware Corporation Ltd., Sambhali Gate, P.B. No. 16, Moradabad-224 001, (9) Uttar Pradesh State Handloom Corporation Ltd., Udyog Bhavan, G.T. Road, Kanpur-208 001, (10) U.P. State Industrial Development Corporation Ltd., 117/130, Sarvodaya Nagar, Kanpur-208 005, (11) U.P. State Leather Development Marketing Corporation Ltd., 16/7, Sadar Bhatti Crossing, Agra-282 003, (12) U.P. State Mineral Development Corporation Ltd., B-52, Mahanagar Extension, Lucknow-226 006 and (13) U.P. Electronics Corporation Ltd., 4, Prag Narain Road, Lucknow-226 001.

Other Incentives and Facilities : Developed plots in industrial areas on deferred payment basis, concessional electricity to new units, water for industrial purposes at subsidised rate, consultancy services, loan assistance, price preference, tax concession etc.

Scope for further development : The state offers excellent scope for the development of the following industries, cement, cement pipes, asbestos cement sheets, scientific glassware, rayon grade pulp, paper, sugar and fermentation, fertilisers, paints and varnishes, gases, AGSR conductors, rosin and turpentine, cotton and woollen textiles, leather and agro-based industries, engineering industries based on aluminium, bicycle parts, steel forgings, machine tools, tractors, harvester combines, sugar mills spares, power cables and other electrical engineering items, power tillers, scooters and automobile ancillaries, industrial machines, sicentific instruments and electronics.

Districts eligible for concessional finance from the financial institutions and for 20 per cent deduction in income for calculating income-tax liability : Almora, Azamgarh, Bahraich, Banda, Ballia, Badaun, Chamoli, Fatehpur, Garhwal, Ghazipur, Hamirpur, Hardoi, Pilibhit, Jalaun, Jaunpur, Jhansi, Manipuri, Pithoragraph, Pratapgarh, Rae Bareli, Sutanpur, Tehri Garhwal, Unno, Uttar Kashi, Barabanki, Basti, Bulandshar, Etah, Etawah, Faizabad, Gonda, Mathura, Farrukhabad, Moradabad, Shahjahanpur, Deoria, Rampur and Sitapur.

Districts/Areas eligible for central subsidy : Balia, Jhansi, Almora, Basti, Faizabad and Rae Bareli.

Central transport subsidy : The central transport subsidy scheme is applicable to the hill districts of Uttar Pradesh.

WEST BENGAL

Capital : Calcutta. *Area of the State :* 88,752 sq. km. *Population :* 5,45,80,647. *Principal Language :* Bengali.

Industries : West Bengal has been in the forefront of industrial development from the very beginning. It was the first state to have paper and steel industries. Jute and tea industries also had a very early lead in the State. Important industries are : jute, tea, cotton textiles, electric fans and sewing machines, railway wagons, steel, paper and paper boards, sulphuric acid, automobiles, bicycles, light engineering, chemicals and pharmaceuticals, aluminium, timber processing, ceramics and glass, leather and footwear, bone-meal and dairying. A number of central public sector undertakings including locomotive, cable, fertilizer, ship building and ordinance are also located in the state. New industrial ventures, include cement, scooter, mini-steel plants etc. There are two steel plants at Durgapur and Burnpur and one alloy plant at Durgapur. The States industrial output is about 20 per cent and coal output is 30 per cent of the country's total. The number of registered working factories is 6,548 and the number of SSI units registered with the Directorate of Cottage & SSI is 1,58,680. The State Government is developing new industrial area at Asansol, Durgapur, Haldia, Kalyani, Kharagpur, Santaldih, Siliguri and Farakka.

Minerals : Coal and china clay are the two most important minerals found in West Bengal. Other minerals are dolomite, rock phosphate, fire-clay, limestone, copper, iron, silica, quartz, felspar, manganese, sandstone and moulding sand.

Infrastructure : (1) *Land :* Many growth centres with all infrastructural facilities are available on liberal terms. (2) *Power :* The total installed capacity is 2,553 MW. (3) *Transport and Communication :* West Bengal has direct access to the sea and has national and international airlinks. The system of roadways and railways radiating out of and into the state connects it and with all major centres in the country. The total road length is 16,888 kms. The total route mileage of railway track is about 3,688 kms. *Airways :* The Calcutta airport is one of the busiest and biggest airports in India. *Ports :* As the port of Calcutta is a reverine port far away from the sea, it cannot cater to the deep-drafted vessels. To overcome this handicap, a modern dock system at Haldia, nearer the sea has been commissioned, where adequate drafts are available for modern oil tankers and bulk carriers. The two ports could handle a combined capacity of 20-25 million tonnes of cargo. An export processing zone has been set up at Falta.

Facilities and Incentives : The following are among the important state institutions which are actively contributing towards the industrialisation of West Bengal. (1) West Bengal Industrial Development Corporation Ltd., 23/A.N. Subhash Road, Calcutta-700 001 , (2) West Bengal Financial Corporation, 4, Kron Sankar Roy Road, Calcutta-700 001 , (3) West Bengal Small Industries Corporation Ltd., 6-A, Raja Subodh Mullick Sq. Calcutta-700 013, (4) West Bengal State Warehousing Corporation, 20, Chandni Chowk Street, Calcutta-700 013 , (5) West Bengal Agro-Industries Corporation Ltd., 23, B.N. Subhas Road, Calcutta-700 001, (6) West Bengal Electronics Industrial Development Corporation Ltd., 225, E. Acharya Jagadish Chandra Bose Road, Calcutta-700 020 and (7) West Bengal Handloom and Powerloom Development Corporation Ltd., 6-A, Raja S. Mullick Square Calcutta-700 013.

Other Facilities and Incentives : The government growth centres allot lands on long term lease, concessional electricity tariff, subsidised water rates, 75 per cent contributions by the state towards preparation of feasibility reports, financial assistance like term loans, underwriting of shares, working capital loan, tax concessions, supply of raw materials, price preference in Government purchases, rent subsidy on sheds, subsidy on consumption of power, subsidy on interest on working capital and subsidy on fixed capital investment.

Scope for further development : The State offers prospects for development of a wide range of industries e.g. food processing, paper and paper board, cement, ceramics, refractories, heavy medium and light structurals, steel, ferrous and non-ferrous forgings, marine engineering, petro-chemicals, fertilizers, rubber chemicals, automobile ancillaries, electronics etc.

Districts eligible for concessional finance from the financial institutions and 20 *per cent deduction in income for calculating income tax liability :* Purulia, Bankura, Midnapur, Darjeeling, Malda, Cooch Behar, West Dinajpur, Jalpaiguri, Murshidabad, Birbhum, Burdwan, Hooghly and Nadia.

Districts eligible for central subsidy : Purulia, Midnapore and Nadia.

UNION TERRITORIES

ANDAMAN AND NICOBAR ISLANDS

Capital : Port Blair. *Area :* 8,293 sq. km. *Population :* 1,88,741.

Industries : There are about 227 medium and small scale industrial units functioning in the territory. The large scale units are located at Bambooflat, Bakultala, Long Island, Haddo and Chatham. The products comprise sawn timber, commercial plywood, match splints and veneers. Besides these, the small scale and handicraft units are engaged in shell crafts, furniture making, bakery products, coir products, rice milling, wheat grinding, oil seeds crushing etc. Nine industrial training institutes under the Directorate of Industries impart training to local entrepreneurs, artisans.and tribals. Most of these centres are training cum production centres. The District Industries Centre has also been set up at Port Blair to provide all support facilities to entrepreneurs at one place.

Infrastructure : As the entire island has been declared as industrially backward, all the facilities extended by Government of India for backward areas would be available for units coming up here. An industrial estate has been developed at Goracharma. Shipping is the major mode of transport. Port harbour facilities have been provided at Diglipur, Mayabunder, Rangat, Havelock, Neil, Port Blair and Hut Bay (Little Andaman) and at Malacca (Car Nicobar), Katchal, Kamorta and Campbell Bay in Nicobar group of islands. The total road length in 1982 was 684 kms. The Andaman trunk road connects the southern most point of south Andamans with Diglipur in the northern island, 300 km. apart. The installed capacity of power in 1983-84 was 8.8 MW which is quite adequate to meet the demands of the industries.

Facilities and Incentives : The Industries Department of the island provides facilities for the industrial development by way of financial and other assistance. Loans under the Andaman and Nicobar State aid to industries rules, 1964, are sanctioned to units, for purchase of raw materials, machineries as well as for working capital. Besides these, raw material assistance, subsidised machinery distribution and marketing facilities are also offered to the new entrepreneurs. There is no sales-tax in the territory.

Scope for further development : Wood based industries, production of packing cases, marine products, fibre and coir industry, pencil slates, wire nails and parcel pins, paints and varnishes, plastic goods, domestic utensils, tyre retreading etc.

Districts eligible for concessional finance from the financial institutions and for 20 per cent deduction in income for calculating income tax liability : Entire territory.

Districts eligible for central subsidy : Entire territory.

ARUNACHAL PRADESH

Capital : Itanagar. *Area :* 83,743 sq. km. *Population :* 6,31,839.

Industries : Principal industries are forest-based medium and small industries such as saw mills, plywood and veneering mills, rice mills, fruit preservation units, oil expellers besides handloom and handicrafts industries. There are 21 training and 24 production centres, providing training facilities in various trades under cottage industries as well as technical education through the Government Craft Training Centres and Industrial Training Institutes.

Infrastructure : (1) *Land :* Industrial Estates have been developed at Itanagar, Deomali and Pasighat. (2) *Power :* The total installed capacity of power is 11.57 MW. (3) *Transport and Communication :* The state is entirely mountainous. All the district headquarters are connected by all weather roads. Till 1981-82, there were 23,057 kms of roads in the territory (surfaced and and unsurfaced).

Facilities and Incentives : As the entire state has been declared backward, special concessions are extended by the state agencies, specialised financial institutions and central government for setting up industries. All the nine districts are ' No-Industry ' districts. The State Government provides 100 per cent transport subsidy and manpower subsidy, excise duty rebate, concessional electricity tariff, price preference of 17.5%, 12.5% and 7.5% allowed to the cottage, small and medium and large industries respectively.

Scope for further development : There is good scope for setting up small-scale units in the fields of forest-based, horticulture-based and agriculture-based industries.

Districts eligible for central subsidy : Entire territory.

Central transport subsidy scheme : The state is eligible for the central transport subsidy scheme.

CHANDIGARH

Capital : Chandigarh. *Area :* 114 sq. km. *Population :* 4,51,610.

Industries : There are 13 large and medium industries out of which 2 are public undertakings. There are 811 units registered under-small scale industries sector and 840 unregistered unit in the small industries sector. Major industries are wool and yarn, hosiery needles, electric meters, antibiotics and medicines, bicycle rims, free wheels, card-board and steel furniture. The cottage and small-scale industries include besides others, iron and steel re-rolling, steel fabrication, sanitary fittings, electronic components, cutlery, machine screws, hardware, electrical appliances, plastic shoes, cotton ginning, machine parts, utensils, paints and varnishes, tiles, conduit pipes and rivets, insecticides and pesticides, auto cables and domestic cables, thermometers, wire drawing and wire products, soap and chemicals, cement pipes, tape recorders, tractor parts, calculators, record players, handloom weaving textile, weaving and detergent powders. An electronic industrial complex is also being developed.

Infrastructure : The land available in Chandigarh for industrial purposes is very limited. Chandigarh has no power station, hydel or thermal, of its own. It is getting its power supply from Bhakra-Nangal system. The Union territory gets 3.5 per cent share of the total power generation from Bhakra complex. A standby arrangement to produce electricity to the extent of 2 MW is also availble in case of major shut down. *Transport :* Chandigarh is well linked with surrounding areas both by rail and road.

Facilities and Incentives : (1) Developed plots are allotted on 99 years nominal lease, (2) Loans upto Rs. 50,000 are advanced at a lower rate of interest under the Punjab State Aid to Industries Act, 1935, loans exceeding this amount are granted by Delhi Financial Corporation which has a sub-office at Chandigarh. Besides, commercial banks also cater to the needs of industrial units in respect of finances, (3) Supply of essential raw materials by the Small Industries Development Corporation and built up accommodation are also provided by this Corporation and (4) Technical assistance especially with respect to electronics is rendered by the Electronic Testing and Development centre. The state consultancy cell also renders expert advice with regard to preparation of project reports.

Chandigarh being a developed area, is not eligible either for central investment subsidy or for concessionl finance from financial institutions.

DADRA AND NAGAR HAVELI

Capital : Silvassa. *Area :* 491 sq. km. *Population :* 1,03,677. *Principal languages :* Bhili/Bhilodi, Gujarati and Hindi.

Industries : There are no major industries. A beginning has been made towards industrialisation by establishing an industrial estate at Piparia and another at Masat near Silvassa. There are 74 industrial units in the union territory manufacturing automobile parts, spectacle frames, cotton and silk fabrics, nylon filaments, foam products, detergent powder, soaps, biscuits, chemical engineering goods, wrist watches etc.

Facilities and Incentives : (1) The two industrial estates at Silvassa and at Masat are provided with power supply, water supply and roads. A new industrial estate at Khadoli is coming up. Power is purchased from Gujarat. A 66 KVA sub-station is functioning at Silvassa. The entire territory has a good network of roads. It has 182 kms of roads with good surface and a 34 km of unsurfaced roads, (2) Training facilities are rendered by the Small Industries Service Institute, Bombay which has jurisdiction over this territory in training matters, (3) The Hire-purchase scheme of the National Small Industries Corporation is extended to this territory, (4) The entire territory is covered under Rural Industries

Project Programme, (5) The entire territory has been declared as industrially backward (6) There is no local or central sales tax regulation and (7) The industrial units importing raw materials in this territory are subject to a charge at the rate of central sales tax only.

Scope for further development : Based on forest products, the industries like mouha oil, bobbins, bidi, match box etc. can be established. There is also good scope for a wood seasoning plant. Small scale units for fruit processing and canning, and dehydrated fruits are also feasible. There is good scope for starting a number of ancillary industries in this territory.

Districts eligible for concessional finance from financial institutions and for 20 per cent deduction in income for calculating income-tax : Entire territory.

Districts eligible for central subsidy : Entire territory.

DELHI

Capital : Delhi. *Area :*1,485 sq. km. *Population :* 62,20,406.

Industries : There were about 57,000 industrial units in 1983-84. The total investment in these units was estimated at Rs. 1,100 crores and the value of total production estimated at Rs. 2,800 crores. Prominent industries are steel castings, drugs and chemicals, paints and varnishes, television sets, radio transistors, electrical appliances, scientific instruments, readymade garments and vegetable oils. Other industries include leather and rubber goods, pottery, textiles and tanning. The well known cottage industries of Delhi are ivory works, gold and silver embroidery, jewellery, brass and copperware. Due to much pressure on land, the master plan of Delhi does not favour the setting up of key industries and large self-contained industries in the territory. However, the rise of Delhi as a big consuming and distributing centre has created a tremendous market for the products of day to day uses and there is good scope in Delhi for industries producing items of daily needs and requiring less space and skilled labour.

Facilities and Incentives : The Union territory has well developed infrastructure. Various facilities and assistance provided by different agencies are given below : (*a*) Institutional assistance is rendered by (1) Delhi Financial Corporation, Saraswathi Bhawan, Industrial Development Corporation Ltd., N-Block, Bombay Life Building, Connaught Circus, New Delhi-110 001. (*b*) Department assistance covers (1) supply of raw material and machinery (2) financial assistance, (3) special assistance to weaker sections (4) infrastructural facilities at the industrial estates at Okhla and at the rural industrial estate at Badli and others. The Okhla industrial estate is one of the biggest in the country. The work for construction of 571 flatted factories at Rani Jhansi Road is almost complete. The development of big industrial estates at Patparganj and Narela is in progress. A part of the functional industrial estate for electronics has already been developed and the remaining area is under development. (5) technical assistance on problems relating to industry are rendered by the Directorate of Industries. There is a Testing and Development Centre at Okhla industrial area, for providing facilities. The Small Industries Service Institute, Okhla, New Delhi, offers technical guidance to necessary entrepreneurs. The Directorate of Industries also renders suitable assistance in this regard. 'One window service' has been set up at its headquarters at Kashmere Gate and at Flatted Factories Complex, Okhla where assistance is provided for registration, issue of municipal licence, sanction of power load, financial assistance from Delhi Financial Corporation and marketing assistance from Delhi State, Industrial Development Corporation. A Tool Room & Training Centre for supplying high quality tools to small scale industries and training to tool makers and designers has been functioning since 1978 at Wazirpur Industrial Area. A Testing Laboratory for Domestic Electrical Appliances has been set up by the Directorate of Industries at Inter State Bus Terminal for the implementation of compulsory quality control on Domestic Electrical Appliances in Delhi. The Govt. of India has set up a service centre at Weaver's Colony, Bharat Nagar.

A statutory Khadi & Village Industries Board has been constituted by the administration to provide necessary assistance to Khadi & Village Industries.

The machines for industry on hire purchase basis are supplied by the National Small Industries Corporation.

GOA, DAMAN AND DIU

Capital : Panaji. *Area :* 3,814 sq. km. *Population :* 10,86,730. *Principal Languages :* Konkani, Marathi and Gujarathi.

Industries : Richly endowed with iron ore deposit and possessing a good harbour 'Marmugao', the mining industry in Goa has taken rapid strides. Besides iron ore, the mineral wealth consists of manganese, ferro manganese, bauxite and silica sand. The mining industry contributes substantially to the economy of the territory. By the end of March 1984, the number of registered small scale units stood at 2,943 with an investment of around Rs. 30 crores. The items manufactured include among others, drugs and pharmaceuticals, aerated waters, wooden furniture, ball pen refills, auto repairs, spray painting, distilled water for storage batteries, grills and steel furniture, ice candies, mosaic tiles, flour mills, welding electrodes, ready-made garments, nuts and bolts, printing & allied activities, spring leaves, cement grills, wooden furniture, plastic files, folders and covers, textile pickers, bobbins, shuttles, PVC pipes and fittings, cotton thread tubes, chokes, processing of coloured films, aluminium collapsible tubes, fish nets, loud speakers, canvas shoes, assembling of transformers, wax candles, blending and bottling of country liquor, metal detectors, laundry soap, floor cleaners, stainless steel utensils, edible oil, rubber components, corrugated boxes, processing of cashew nuts, food preservative chemicals, brass metal lamps, electronic equipments etc.

Infrastructure : (1) *Land :* Eight industrial estates have been set up at Corlim, Mapsa, Tivim, Sancoale, St. Jose de Areal, Bicholim, Cacoda and Daman, where developed industrial plots are available on lease basis and built up sheds on rental basis. (2) *Power :* Power is obtained from the neighbouring states of Karnataka and Maharashtra which is quite sufficient to meet the demands of the existing and prospective units. (3) *Transport :* The territory has an excellent sea port and air port, railways, roads and inland water system. Road transport is an important means of transport and serves as a feeder to inland water ways in the movement of ore and other goods.

Facilities and Incentives : The important institutions providing assistance for industrial development of the territory are : (1) Directorate of Industries and Mines, Government of Goa, Daman & Diu, Udyog Bhavan, Panaji-403 001. (2) Small Scale Industries Service Institute, Audi Mupari Building, Margao-403 601. (3) Maharashtra State Financial Corporation, Panaji-403 001 (with branches at Margao and Daman). (4) Goa, Daman and Diu Industrial Development Corporation, Panaji-Goa 403 001. (5) Economic Development Corporation of Goa, Daman and Diu, Panaji-403 001. (6) Goa Handicraft Rural Small Scale Industries Corporation, Panaji-403 001. (7) Goa, Daman and Diu Khadi and Village Industries Board—Panaji-403 001. (8) Goa Daman and Diu Khadi & Village Industries Commission, Panaji-403 001.

Other Facilities and Incentives : (1) *Loans :* Loans are given by the Director of Industries and Mines under the Goa, Daman and Diu State Aid to Industries Act, 1965 and S.A.I. Rules, 1968 made thereunder to the extent of Rs. 1,00,000 to the Co-operative Societies and to the extent of Rs. 25,000 to other types of industrial units and are re-payable in 10 years time in case loan is for fixed capital requirements, and in 5 years time in case the loan is for working capital requirements. The present rate of interest on these loans is 5½ per cent per annum.

Central Investment Subsidy : The Industrial units set up in the entire territory of Goa, Daman and Diu qualify for 10 per cent/15 per cent/25 per cent/outright grant/subsidy under this scheme. The subsidy will be paid on investment made after 1-10-1970 and prior to 1-3-1973 at the rate of 10 per cent subject to a maximum of Rs. 5 lakh and investment made from 1-3-1973 up to 31-3-1983 at the rate of 15 per cent subject to a maximum limit of Rs. 15 lakh and on investment made after 1-4-83 at the rate of 25 per cent subject to a maximum limit of Rs. 25 lakh.

Power Subsidy : The Industrial units having connected load up to 20 hp are paid power subsidy equal to the difference between the actual rate paid and nine paise per unit subject to a maximum of nine paise per unit.

Subsidy for feasibility report : Under the scheme GDDIDC is offering subsidy to the extent of 75 per cent in respect of the cost of preparation of feasibility studies.

Rent Subsidy : The Government is giving rent subsidy on the sheds constructed in the Industrial Estates, and occupied by Small Scale Industries at a sliding rate of 50 per cent of the economic rent during first and second year, 40 per cent during the third year and 25 per cent during the fourth year.

Exemption from Sales Tax : This exemption is admissible to all the registered industrial units in this territory on the sale of their finished products at the point of sale, made by the small scale unit for a period of 5 years with effect from the date of first sale of the goods manufactured, processed or assembled on or after the date of its registration under the Goa, Daman and Diu Sales Tax Act.

Price Preference : Price Preference at the rate of 15 per cent on the purchases made by the Government Departments.

Reduction on Stamp Duty : The Government is remitting 50 per cent of the stamp duty payable under the Stamp Act, 1899 in respect of bonds or mortgage deeds executed in favour of scheduled commercial banks, MSFC as well as loans by Government for production or development of small scale or cottage industries and also on the lease deeds executed by the GDDIDC.

Income Tax Exemption : The Government of India is exempting units set up in the industrially backward areas to the extent of 20 per cent of the taxable profits, from Income Tax, for a period of 10 years.

Interest-free Sales Tax Loan : New Industrial Units can avail of interest free sales tax loan to the extent of the sales tax paid by the Industrial Unit for the first five years since starting production. The loan not exceeding Rs. 50 lakhs or 50 per cent of the investment in fixed assets whichever is lower is disbursed. The loan is repayable after 12 years in six annual instalments.

Assistance by Institutions :

Maharashtra State Financial Corporation (MSFC) : The services of the MFSC have been extended to the Union Territory of Goa, Daman and Diu from August, 1964. The Corporation considers applications for loans from Rs. 20,000 to Rs. 15 lakh to proprietory and partnership concerns while in case of limited companies, and registered co-operative societies the Corporation is empowered to consider applications upto Rs. 30 lakh. The rate of interest is 8 per cent for loans of Rs. 50,000 and loan above Rs. 50,000 it is 13½ per cent and it would be reduced to the extent it is subsidised by IDBI under refinance scheme. The assistance provided by the Corporation is as under :

Seed Capital Assistance (under special class of share capital) : The assistance is given in the form of soft loan on service charge of 1 per cent to proprietory and partnership concerns. The amount of assistance per project will not exceed 20 per cent of the cost of project or Rs. 2 lakh whichever is lower.

Loans upto Rs. 2 lakh to young technicians.

Assistance towards Research and development cost incurred in product development.

Foreign exchange loans at 12 per cent rate of interest for backward regions.

MSFC also operates the following schemes :

(i) Scheme for assistance to young technicians.

(ii) Scheme for assistance for modernisation of existing small scale units.

(iii) Scheme for assistance towards research and development cost incurred in product development.

(iv) Scheme for financial assistance on soft terms to SSI units proposed by new entrepreneurs from special class of share capital of MSFC.

(v) Scheme for financial assistance to doctors, medical practitioners for purchase of X-ray equipments.

Scope for further development : Chemical Industries : Printing of aluminium foils, manganese hydroxide (power form and cake form) heat scaling paper, empty gelatine capsules, glass ampules, plastic filler for tooth and dental repairing, plastic collapasible tubes, plastic raincoats, leather tanning, rubber goods (Dipped Latex Products). *Electrical/Electronic products:* starters for electronical motors, assembling of radios and T.V.'s, information display system, dictaphone, electronic capacitors, controlled investors and convertors, electronic weighing machines, repairing of radios and T.V.'s, car cassettes. Repair centre for consumer electronic products, Aerial Antenne for Radio Receivers/T.V. Receiver, Voltage Stabilisers. *General Engineering Products :* Gun-Metal Bushes, Power Distribution Boards, Junction Boxes, Machine Screws, Wiremade kitchenware stand, Pressure die castings, Bottle washers, Hypodermic needles. *Other Non-Specified Industries :* Fuel bricuettes, Paper cups and Saucers, Particle Boards, Canvas Bats, Wire Brush, Umbrella Assembly, Xerox copying, testing centres for pharmaceuticals.

Districts eligible for central subsidy : The entire territory is eligible for subsidy of 25 per cent of capital investment, subject to a ceiling of Rs. 25 lakhs.

LAKSHADWEEP

Capital : Kavarati. *Area :* 32 sq. km. *Population :* 40,249.

Industries : Fishing is the main industry. The sea around the island is highly productive and is rich in Tuna and Shark varieties of fish. There are 204 mechanised boats in fishery operations. There is a factory for canning tuna fish at Minicoy Island. There are boat-building yards at Kavarati and Chetlot islands. Coir spinning, oil extracting, handloom, mat weaving, hoisery knitting and canning are some of the small industries. There are coir production-cum-demonstration centres at Kadmat, Amini, Kiltan and Androth islands. There are two coir training centres one each at Agatti and Chetlat. The defibering plants are situated at Androth and Kadmat islands. Two handicrafts training centres are functioning, one at Kavarati and the other at Kalpeni.

Infrastructure : Power : The installed capacity of the power houses is 1,959 kW. *Transport :* Inter-island motor launch services are the only means of transport. Landing facilities are available at Kavarati, Amini and Minicoy islands, Androth island, Kadmat and at Kiltan. The Shipping Corporation of India is running vessels to provide regular communication between the islands and the mainland.

Facilities and Incentives : The administration of the territory is actively assisting the population in all economic activities. The only tax levied by the administration is the tree tax. Taxes like Octroi, Sales tax etc., are unknown to the territory. Since the entire territory has been declared as industrially backward, it is eligible for many concessions. Industrial development in the territory is to aim basically at the exploitation of the local resources confined to two products namely fish and coconut, around which industries are to be organised so as to meet the local demand.

Districts eligible for concessional finance from the financial institutions and for 20 per cent deduction in income for calculating income tax liability : Entire territory.

Districts eligible for central subsidy : Entire territory.

MIZORAM

Capital : Aizawal. *Area :* 21,081 sq. km. *Population :* 4,93,757. *Principal languages :* Mizo and English.

Industries : There were 600 registerd small industries in the territory as on December 1983. Handloom and handicrafts are the cottage industries. The established small industries include rice milling, oil and flour milling, mechanised bamboo workshops, saw milling, brick making, aluminium casting and furniture workshops. There is sufficient raw material for establishing a paper-pulp project.

Infrastructure : Industrial plots are available in industrial estates of Aizawal and Lunglei. Efforts are being made to provide all infrastructural facilities to the constituent units in the estates.

The total power generation capacity is estimated to be about 6.60 MW. The territory has 3,253 kms of all-weather roads linking almost all important towns and villages.

Facilities and Incentives : The State Directorate of Industries provides all facilities by way of financial assistance, procurement of raw materials, subsidy on tools and machineries etc. There is no production tax, sales tax and octroi duty in the entire territory. The entire territory is declared as industrially backward and is therefore, eligible for both state and central subsidies.

Scope for further development in the following industries : Paper and pulp, saw mill, wood seasoning, plywood manufacturing, sheet metal works, barbed wire, washing soap, strawboard, splint and veneers, cardboard, cotton ginning, fruit preservation and sugar. There is not much scope for big and traditional industries.

Districts eligible for concessional finance from the financial institutions and for 20 *per cent deduction in income for calculating income tax liability :* Entire territory.

Districts eligible for central subsidy : Entire territory excluding the area within the municipal limit of territory's capital.

Central transport subsidy : Entire territory is eligible for central transport subsidy scheme.

PONDICHERRY

Capital : Pondicherry. *Area :* 492 sq. km. *Population :* 6,04,471. *Principal languages :* Tamil and French.

Industries : There are over 2400 small scale industries of which electrical appliances, camphor, leather goods, wooden articles, electronic items, plastics, steel furniture and bicycle parts are the main industries. Besides there are 20 medium and large industries including five textile mills. The government distillery at Pondicherry manufactures industrial alcohol, bottled arrack and denatured spirit.

Infrastructure : Industrial estates exists at Thattanchavady, Karaikal and at Manapet in Pondicherry. A fourth estate is under development. These estates provide both developed plots and ready built sheds. The territory has good network of roads connecting important centres of Tamil Nadu, Kerala and Andhra Pradesh. Pondicherry and Karaikal are connected with Madras by metre gauge railway line and Mahe is connected to Mangalore by broad gauge line. The total length of surfaced road is 459 kms. The only minor port of Pondicherry is an openstead and ships can anchor a couple of miles off-shore.

Facilities and Incentives : Following are the important institutions engaged in the process of industrial development of the Union Territory of Pondicherry (1) The Pondicherry Industrial Promotion Development and Investment Corporation Ltd., 71, Gingee Salai, Pondicherry 605 001. (2) The Tamil Nadu Industrial Investment Corporation Ltd., Arul Manai, 27, Whites Road, Madras-600 014.

The entire Union Territory of Pondicherry comes under ' Category A '. Special district declared by the Central Government with effect from 1.4.1983 making it eligible for 25 per cent Central Investment Subsidy. Other benefits are (1) Sales tax holiday for 5 years on the sale of finished products by new industries, (2) 15% price preference for sale of products to Government departments /undertaking with exemption from security deposit and earnest money deposit, (3) subsidy on power consumption by new industries, (4) interest subsidy for small scale industries registered with ISI, (5) subsidy towards installation of pollution control units subject to a maximum of Rs. 1 lakh, (6) concessional finance from PIPDIC for purchase of fixed assets, (7) allotment of developed areas to new industries by the PIPDIC and (8) A field testing station in collaboration with the Development Commissioner (SSI), New Delhi is being commissioned at Thattanchavady for providing testing facilities for raw materials as well as finished products.

Scope for further development : There is good scope for setting up units in the small scale sector for the manufacture of strawboard, activated carbon, sugar cane wax, oil by solvent extraction process, canning of fish and prawns, fish meal, mechanised fishing boats, nylon fishing nets, mono-filament from high density polythene, insulating tapes, bicycle tyres and tubes, building hardware, electronics and electrical components, sewing machines, typewriters, duplicators, etc.

Districts eligible for concessional finance from the financial institutions and for 20 *per cent deduction in income for calculating income tax liability :* Entire territory.

Districts eligible for central subsidy : Entire territory.

EXPORT-IMPORT POLICY

The new export-import policy was announced on 12th April 1985. According to government sources, the main objective is to provide a stable regime of economic policies, minimising year-to-year uncertainties, so that the industrial sector can plan its activities in a long-term perspective. In pursuance of this objective, the import-export policy was announced for a period of 3 years.

The major objectives of the policy are :

1. To impart continuity and stability to import-export policy ;
2. To facilitate increased production through easier and quicker access to inputs that require importing ;
3. To strengthen the base for export production and strive for a major thrust in exports ;
4. To attempt maximum savings in import, to support indigenous production and to promote efficient import substitution ;
5. To facilitate technological upgradation and modernisation in production ; and
6. To reduce licensing, to streamline procedures and to decentralise decision-making which would reduce costs in terms of time and decision-making.

Overall, this policy has maintained the broad structure of the import-export policy evolved in the recent years, attempting to provide quicker and easier access for our producers to crucial inputs that are not available locally. For this purpose, the area of specific licensing has been reduced by the abolition of the category of automatic licensing. It is expected that this reduction in licensing would save both time and resources, eliminating avoidable delays and would particularly benefit the small scale sector.

Items on the list of canalised imports were reviewed to bring them in conformity with the basic objectives of canalisation viz., purchases in bulk for the sake of securing better terms of trade, developing long-term sources of supply etc. Consequently, imports of 53 items which did not meet the criteria have been decanalised. The procedure for supply of imported inputs to actual users by canalising agencies has also been streamlined.

A new scheme known as the Import-Export Passbook Scheme has been introduced for manufacturer-exporters to provide duty-free access to imported inputs for export production. This scheme, which is wider in scope and more flexible in operation than the previous advance licensing scheme, is to come into effect from 1st October 1985. This would also eliminate possible delays in getting licences under duty exemption scheme every time an export order has to be extended.

In respect of machinery for modernisation of export production, 201 items of industrial machinery have been included in the list of capital goods allowed for import under Open General Licence. The major sectors to benefit from this liberalisation are automobiles, leather, electronics, jute manufacturers, garment/hosiery/made-ups, pen manufacturing, oil field services etc. The value limit per unit to cover foreign exchange requirements for import of balancing equipment having impact on quality and/or quantity of output, acquisition of technical know-how, foreign consultancy services etc. under Technical Development Fund has been enhanced from US. dollar requirment of Rs. 5 lakhs to US dollar equivalent of Rs. 100 lakhs.

Trading Houses and Export Houses with prescribed minimum level of exports have been allowed to import technical designs, drawings and other documentation required for their supporting manufacturers to the extent of Rs. 25 lakhs and Rs. 10 lakhs respectively, against their own replenishment additional licences. The concept of eligibility for additional licences based on the net realisation of foreign exchange in the 1984 policy announcement, has been extended to the growth rate prescribed for the renewal of Trading/Export House Certificate. This provision shall particularly benefit those Houses that are diversifying and progressively exporting products with higher net foreign exchange earnings. The flexibility area for utilisation of replenishment licences by manufacturer-exporters has been enlarged. Import policy for computer systems has been liberalised. Import of computer systems costing less than Rs. 10 lakhs (CIF) has been allowed under OGL by all persons for their own use. In this case higher customs duty is leviable. Otherwise, if the importer takes prior clearance from the DoE, lower rates of customs duty would apply. The scope of computer software export scheme has been extended to cover satellite communication also.

In order to provide protection to indigenous industry, 67 items of raw materials, components etc, from Open General List and automatic permissible list have been shifted to limited permissible list. 20 items from canalised list were shifted to limited permissible list and 16 items to the restricted list. Four items were taken out of the list of capital goods on OGL. To facilitate quicker decision-making, decentralisation has been resorted to and larger powers have been delegated at various levels for the import of capital goods as well as raw materials and components. The framework of these trade policies is tuned towards striking balance between export promotion on the one hand and import substitution on the other. The basic objective is to manage our trade balances so that we may attempt a successful reconciliation between a manageable BOP situation with a tolerable debt profile.

The government, therefore, views this export-import policy as a step towards better performance of the economy as a whole and takes the view that significant improvement in the foreign trade position cannot occur in isolation, without an improvement in the overall economic situation.

FORMATION OF A COMPANY

The broader outlines of the procedure for the formation of a company are common for all types of companies, upto the grant of certificate of incorporation. Every company has to go through the stages of promotion and incorporation and a public limited company has to go through two further states viz. subscription stage and commencement stage, before it commences its corporate activities. However, steps required to be taken towards the incorporation of a company differ, in contents and statutory compliance, depending upon the type of company in question.

Promotion : This is the preliminary preparatory stage before incorporation. Three important aspects have to be considered and decided upon.

(*a*) *Objects :* It is important that the objects of a company be ascertained and outlined, for once a company is registered with certain objects, it can only operate within the ambit of those objects.

(*b*) *Type of Company :* The type of company to be formed i.e. whether it is to be a public limited or private limited company, limited by shares and/or guarantees etc. has to be determined.

(*c*) *Finance :* A financial plan is to be prepared giving estimates of funds required and the means or sources therefor. In the case of a private company, financial needs have to be met through private arrangements. In the case of a public company, it has to be decided whether initial requirements are to be met privately or through public issue. The division of share capital and the amount of share capital to be issued to the promters and/or the public, underwriting arrangements etc. have to be decided upon.

Preliminary expenses : To bring a company into existence, certain legal and other expenditures have to be incurred. Provisions have to be made for such expenses.

Working capital : The quantum of working capital required to meet the company's day-to-day commitments have to be duly assessed and its smooth inward flow ensured.

Future capital : Requirements have also to be properly assessed and suitable provisions made for the purpose.

Name of the Company : A company becomes a legal person on its incorporation and that legal person is known by its name. Due consideration has to be given to the name by which a company will be registered. Registration of a company by a name, which in the opinion of the Central Government is considered undesirable, is prohibited by law.

Any name that is identical with, or too nearly resembles that of a company already in existence is considered undesirable. A company will not be registered by a name that is deceptive, misleading, or likely to cause confusion or suggest any connection with the Government, or is offensive to any section of the public or calculated to mislead regarding the objects and activities of the company. Also, the words ' Co-operative ' or ' Sahakari ' may not form part of the company's name. The name of a public limited company should contain the word ' Limited ' as its last word ; ' Private Limited ' should be the last words in case of private limited company.

It is thus advisable to ascertain beforehand from the Registrar of Companies whether the proposed name is available for registration by making an application under Rule 4-A of the Companies (Central Government) General Rules and Forms, 1956, with a fee of Rs. 100. On the approval of the Registrar, the name would be available for adoption for a period of three months from the date of intimation by the Registrar. Since the Memorandum of Association that is required to be filed with the Registrar /or the purposes of incorporating a company, contains a name clause, it is advisable to exercise due care in selecting the name before getting the Memorandum printed, so as to avoid future complications in this respect.

Registered Office : Section 146 enjoins upon a company to give notice, in Form No. 18, of the location of the registered office within 30 days of incorporation, to the Registrar of the state in which the registered office may be so situated. Location of the registered office is important since it is here that the statutory documents are to be kept, where the annual general meetings are required to be held and to which all correspondence to the company is addresed. The location of the Registered Office must be carefully chosen, after giving due consideration to various factors including administrative expediency.

Common Seal : An incorporated company is required to have a common seal with its name engraved on it in legible characters as evidence of authenticity on any document executed by it. The common seal is statutorily required to be used in respect of certain documents like share certificates, bonds, formal contracts, power of attorney etc. Care should be taken to see that the form and design of the company's seal do not resemble those of other companies.

Sanction-approval from the appropriate authority : Having regard to the nature and activities of the proposed company, it has to be determined beforehand whether it would be necessary to obtain sanction/approval from the Government under any law. For example, sanction of the Ministry of Industry is required for setting up certain industries. If the industry concerned comes under the licensing policy of the Central or State Government, necessary permission or the ' Letter of Intent ' as the case may be, should be obtained. Similarly the sanction of the Reserve Bank of India is required under the Foreign Exchange Regulation Act, 1973 in certain cases. Also the consent of the controller of Capital Issues is necessary in respect of initial issue in certain cases. An approval under the M.R.T.P. Act 1969 is required for establishing a new undertaking which would be inter-connected with an undertaking to which sec. 20(a) of that Act applies.

With a view to reducing the time lag in issuing certain approvals and to expedite the investment process in all its stages, the Government has introduced a system of industrial approvals which facilitates the filling of a composite application for industrial licence, foreign collaboration approval, capital goods clearance and approval under the M.R.T.P. Act. Specific time targets have been prescribed in each case within which the approval will be granted.

Preparation of Documents : Documents required to be filed with the Registrar of the state in which the registered office of the company is situated include the Memorandum of Association, the Articles of Association and a Declaration to the effect that the requirements of the Companies Act 1956, has been duly complied with.

Memorandum of Association : This is a document of great importance, as it contains the basic conditions on which the company would be allowed to be incorporated. It provides for a separate identity for the company by a name, status, range of objects, capital structure and nature of liability of its members. This document therefore should be prepared with great care as to duly comply with every statutory requirement, so that the registration of the company is not unnecessarily withheld or delayed on account of any lapse in this regard and to avoid possible future controversies as regards its meaning and interpretation. Sections 12-19 of the Companies Act 1956, contains the relevant provisions relating to the Memorandum of Association.

As regards its contents, the Memorandum should contain the following : (*a*) Name clause ; (*b*) Registered office clause ; (*c*) Objects clause ; (*d*) Liability clause ; (*e*) Capital clause and (*f*) Subscription clause. As regards the last mentioned clause, the Memorandum of Association should be subscribed by at least 2 persons in the case of a private company and at least 7 persons in the case of a public company. Any person who is *sui juris* i.e. capable of entering into a contract on his own, can subscribe to the Memorandum ; he should state that he agrees to take the number of shares shown against his name and should sign the document in the presence of at least one witness who should attest his signature, besides writing in his own handwriting, his name, parentage, occupation, address and number of shares subscribed.

Articles of Association : Another important document to be prepared along with the Memorandum and filed with the Register of Companies is the Articles of Association of the Company. The Articles provide regulations for the conduct of the corporate affairs. It is compulsory to get the Articles of Association registered in case of an unlimited company, a company limited by guarantee and a private company limited by shares. A public company, if it so desires, may get its Articles of Association registered likewise. However if no such Articles of Association is registered then the regulations contained in Table A of Schedule 1 of the Act will become applicable to it. In case the company wishes to adopt Table A in toto, a declaration to that effect should be filed with the Registrar for his records. The Memorandum of Association of such a company will be deemed unaccompanied by the Articles and the *stamp duty* will be accordingly calculated at a compound rate. Where the company has its own registered Articles, the regulations contained in Table A of Schedule 1 will still be applicable to the extent these have not been expressly included in the registered articles. However, it is always advisable to draw self-contained Articles which should expressly exclude those provisions of Table A which have not been adopted. In the case of other companies, the Article should be in one of the forms in Tables C, D, and E in Schedule 1, as may be applicable depending upon the type of the company in question, as in a form as near thereto as circumstances permit.

Generally Articles of Association deal with the following :

(1) Share capital (if the company is limited by shares)—its allotment, variation of rights, calls on shares, transfer and transmission, forfeiture and surrender, conversion into stock and share warrant, (2) Members, (3) Alteration of capital, (4) General meetings—proceedings and votes of members, (5) Board of Directors, (6) Notice (7) Manager or Secretary (8) The Seal, (9) Dividends and Reserves, (10) Execution or adoption of preliminary agreements (if any), (11) Accounts, (12) Borrowing, (13) Capitalisation of profits, (14) Winding up, and (15) Indeminity.

In case of a company, in respect of which a licence under Section 25 of the Act has been obtained or applied for, the Memorandum and

Articles should contain such conditions as are directed by the Regional Director.

Like the Memorandum, the Articles of Association should also be printed, divided into paragraphs, numbered consecutively and signed by each subscriber of the Memorandum in the presence of at least one witness, who would attest his signature. The Articles should be duly dated and stamped.

The Memorandum and Articles of Association are very important documents stating the extent and range of corporate activities of the company and the manner in which its affairs are to be conducted. So, before these are presented to the Registrar, it is advisable to submit the draft Memorandum and Articles for the Registrar's scrutiny and approval. Since these documents are required to be printed, subsequent alterations would be difficult and expensive.

As per the Indian Stamp Act 1899, stamp duty is payable on the Memorandum of Association. The Registration fee payable is determined on the basis of the authorised capital of the company.

Other documents : Another document to be filed for purposes of registration is the declaration of compliance with the provisions of the Act, which are incidental to the formation of the company. This declaration is to be filed in Form No. 1 of the Companies (Central Government) General Rules and Forms, 1956. The declaration made in this Form is to the effect that all the requirements of the Companies Act, 1956 and the rules thereunder in respect of matters precedent to the registration of the company and incidental thereto have been complied with. The declaration may be signed by an Advocate of the High Court or Supreme Court or an Attorney or Pleader entitled to appear before a High Court or a Chartered Accountant practising in India, who is engaged in the formation of a company, or a person named in the Articles as a Director, Manager or a Secretary of the company. The signature of the person making this declaration should be attested by a witness. The description and address of the witness should also be given. The date of the declaration of compliance should not be prior to the date of the Memorandum, the Articles and other documents. The declaration should be made on non-judicial stamp paper of prescribed value.

It is also advisable to file certain other documents.

(1) Notice of the situation of the registered office as on the day of incorporation in Form 18 in pursuance of Section 146;

(2) Written consents of persons who have agreed to act as directors;

(3) Particulars of directors etc. in Form 32, in pursuance of section 303 (2) and

(4) Declaration of compliance with the provisions of section 149 (2) (b) in Form 20 in the case of a public limited company.

Also, if any agreement has been referred to in the Articles of Association, a copy of it should be filed along with the above documents. A prescribed fee on each of these documents should also be paid, on the basis of the authorised capital. The law provides for a period of 30 days from the date of incorporation, for filing these documents.

For the sake of practical convenience, since all the subscribers will not be able to assemble at the Registrar's Office, it is customary to execute a power of attorney by which all the subscribers would authorise one person to act on their behalf in the matter of registration of the company. Where a licence under Section 125 has been obtained or applies for, a copy of the application so made along with the documents referred to in Regulation 4 of the Companies Regulation, 1956, or a copy of the licence granted, as the case may be, are required to be furnished to the Registrar.

The Process of Incorporation : On receipt of the necessary documents and on payment of the prescribed fee, the Registrar's office will proceed with the examination of the documents. If any defect is found in the documents, they would have to be rectified by the applicants. Where any such defect relates to a material alteration the signatories to the document should make the necessary correction under their initials and re-submit to the Registrar.

When the documents filed are found to be in order and approved by the Registrar, and the required fees have been paid and the objects of the proposed company are in order, the Registrar will issue a certificate of incorporation which is a conclusive evidence as regards the compliance with the requirements of the Act in respect of registration. The certificate of incorporation gives the company its legal entity and attests its registration.

Commencement of business : A company on receiving the certificate of incorporation becomes forthwith capable of exercising all the functions of an incorporated company. However in the cases of companies other than a private company and a company with no share capital, a further requirement is to be complied with. A public limited company has then to wait for the receipt of another certificate from the Registrar of companies viz, the certificate for the commencement of business, which is granted when the following formalities are completed.

(1) The company must file with the Registrar a Prospectus or a Statement in lieu of the Prospectus. A Statement in lieu of Prospectus has to be prepared by those companies which do not find it necessary to issue a Prospectus for the issue of their shares. The statement must include all the information which a Prospectus must contain under the law.

(2) The number of shares issued should be not less than the minimum subscription mentioned in the Prospectus.

(3) The Directors must have paid on the shares held by them an amount equal to what has been called up from other shareholders.

(4) A statement should be filed with the Registrar to the effect that all provisions of the Act in respect of allotment of shares and commencement of business have been complied with.

If the Registrar is satisfied that there is no irregularity, the certificate of commencement will be issued.

Consent of the Controller of Capital Issues : Prior to November 1966, it was obligatory for a company to obtain previous permission of the Controller of Capital Issues if it intended to raise more than Rs. 50 lakhs capital by the issue of shares and debentures. The present rules require that except where a company intends to issue Bonus shares prior permission is not required for issue of shares or debentures provided the following conditions are fulfilled :

(1) The Debt-Equity ratio does not exceed 2 : 1.

(2) The Equity to Preference ratio is at least 3:1.

(3) Shares are issued at par value.

(4) The rate of dividend on Preference share, capital and the rate of interest on Debentures should be in accordance with the stipulations issued by the Government from time to time.

Though prior permission is not required for the issue of share, under the above circumstances the company must inform the Controller of Capital Issues about all particulars relating to the issue as per rules.

ANALYSIS AND INTERPRETATION OF FINANCIAL STATEMENTS

Financial Statement analysis and interpretation refers to a systematic and constant effort to determine the significance and meaning of the financial statement data to enable forecasting the prospects of future earnings, ability to repay debts and the probability of adopting a sound dividend policy. It is designated to be the last of the four major steps of accounting, which involves the presentation of information that aids Business Managers Investors, Debentureholders, Creditors and Bankers, Trade Unions and Employers, Security Analysts, Auditors, Government, Stock Exchange, and other persons such as Researchers, Economists, the Company Law Board, Public Accounts Committee and the Estimates Committee.

Analysis and Interpretation are closely connected because interpretation is impossible without analysis. For analysing the financial data and interpreting them in a systematic manner, a number of techniques or tools are available such as :

(i) Comparative financial and operating statements.
(ii) Common-size statements.
(iii) Trend analysis.
(iv) Average analysis.
(v) Ratio accounting.
(vi) Fund flow statements.

(*i*) *Comparative Financial Statements* : They are statements indicating the direction of movement with respect to financial position and operating results. They are very useful to the analyst because they contain not only the data appearing in a single statement but also information necessary for the study of financial and operating trends over a period of years. Comparative statements may be made to show

(*a*) absolute data (money values or rupee amounts)

(*b*) increases and decreases in absolute data in terms of money values

(*c*) increases or decreases in aboslute data in terms of percentages

(*d*) comparisons expressed in ratios

(*e*) percentage of totals.

The more common types of such statements are (1) Comparative Balance Sheet, (2) Comparative Income Statement, (3) Comparative Statement of Working Capital and (4) Comparative Statement of Manufacturing Costs.

(*ii*) *Common-size Statements :* They are comparative statements that give only the percentages or ratios for financial data without giving the rupee values. They are also known as 100 per cent statements because cash statement is reduced to the total of 100 and each individual item is stated as a percentage of the total of 100. Each percentage shows the relation of the individual items to its respective total. The common size-statements are most valuable in making comparisons between the companies in the same industry. Examples of the common size statements are common-size balance sheet and common-size income statement.

Computation of common-size statements :

(1) Total assets, total liabilities and capital and total net sales are stated as 100 per cent.

(2) The ratio of each statement item to the statement total is found out by dividing individual money amounts by the total amount in the statement.

E.g. If selling expenses in any particular year of a business are Rs. 60,000 and its net sales is Rs. 6,00,000 for that year, the above two steps may be illustrated as follows :

$$\frac{\text{Selling Expenses}}{\text{Net Sales}} \times 100 \text{ ie} \frac{60{,}000}{6{,}00{,}000} \text{x } 100 = 10\%$$

This denotes that selling expenses for that particular year is 10 per cent of net sales or they amount to Rs. 10 for every Rs. 100 worth of net sales.

Other items can also be incorporated in the statements in the same manner and similar conclusions can be drawn.

(*iii*) *Trend Analysis :* Under this technique, a statement of one period is taken as a base with reference to which all other statements are to be studied. Every item is to be stated as 100 in the statement which is taken as the base. If the amount of an item in another statement is less than that in the base statement the trend percentage will be below 100 and, if the amount is more than the base amount, the trend percentage would be above 100 per cent. Trend ratios can be compiled by dividing each amount in the statements with the corresponding items in the statement taken as the base. Any one trend by itself is not very informative and, therefore comparison to related trends alone is valuable to the analyst as the analysis of the ratios over the past few years suggests the trend or direction in which the enterprise is moving whether upward or downward. However, it should be borne in mind that the comparability of trend ratios is adversely affected to the extent to which accounting principles and policies reflected by the accounts have not been followed consistently throughout the period under study.

(*iv*) *Average Analysis :* Averages are another important tool of interpretation, and this technique is an improvement over trend analysis method. When trend ratios have been determined for the firm, these figures are compared with industry averages. Some of the important averages which the management can use are the average stocks, average monthly sales, average gross profit, etc.

(*v*) *Ratio accounting or Ratio Analysis :* It is the process of determining and interpreting numerical relationships based on financial statements. It is the technique of interpretation of financial statements with the help of accounting ratios derived from the balance sheet and profit and loss account. It involves the comparison of existing ratios against standards established. The standards may be set by management as goals expressed in the budgets (i.e. budgetary standard), or may be historical figures showing performance of the same concern in the past (i.e. historical standard), or may be figures reflecting the performance of other companies (i.e. industrial or market standard).

Ratio is simply one number expressed in terms of another, it is an expression of relationship spelt out by dividing one figure by another. Accounting ratios can be expressed in various ways, such as :

(*a*) a pure ratio, say ratio of current assets to current liabilities is 2 : 1 or

(*b*) a rate, say current assets are 2 times current liabilities or

(*c*) a percentage, say, current assets are 200 per cent of current liabilities.

Each method of expression has a distinct advantage over the other. The analyst will select that which will best suit his convenience and purpose. There are certain accounting ratios which can be best expressed if stated as a pure ratio e.g. Debt-Equity ratio, Current ratio. Some other ratios can be best expressed as a rate only, e.g. Stock Turnover ratio, Debtors Turnover ratio etc. While some others can most advantageously be expressed as a percentage only, e.g. Gross Profit ratio, Operating ratio etc. Ratios are expressed in such a way that the first appears as the numerator and the second as the denominator.

Classification of Ratios

Accounting ratios may be classified in a variety of ways :

(*a*) Classification according to statements.

(*i*) *Balance Sheet* (*Position*) *Ratios:* They deal with relationship between two items or group of items which are taken from the balance sheet such as : Current ratio i.e. $\frac{\text{Current assets}}{\text{Current Liabilities}}$

Debt-Equity ratio i.e. $\frac{\text{Outsiders' Funds}}{\text{Shareholders' Funds}}$

(*ii*) *Profit and Loss Account* (*Revenue*) *Ratios :* Ratios calculated out of the figures appearing in the profit and loss account. They are also known as operating ratios; e.g. Gross Profit Ratio, Expense ratios, Operating Profit ratio etc.

(*iii*) *Position-cum-Revenue Ratios :* These ratios are also known as consolidated or combined or complex ratios or inter-statement ratios. They portray the relationship between items one of which is a part of the balance sheet and the other of the revenue statement, e.g. Return on Total Resources, Return on Capital Employed, Turnover of Debtors and Creditors, Earnings ratios etc.

(*b*) Classification according to Time :

(*i*) *Structural ratios,* i.e. ratios computed from data referring to the same point of time, eg. ratios of a particular month or year.

(*ii*) *Trend ratios,* i.e. ratios compared between the items referred to different periods of time.

(*c*) Classification according to Nature :

(*i*) *Primary ratios :* It measures the size of profit in relation to capital employed. eg. Operating Profit to Capital employed.

(*ii*) *Secondary ratios :* Also referred to as supporting ratios, brings to light strategic facts in the profit earning structure. e.g. Stock Velocity, Debtors Velocity, Expense ratios, etc.

(*d*) Classification according to Functions :

Ratios are grouped in accordance with certain tests which they are intended to subserve from the viewpoint of various parties having a financial interest in an enterprise. These tests are :

(i) *Tests of Liquidity.*
(ii) *Test of Profitability.*
(iii) *Market Tests.*

Financial ratios include liquidity and solvency ratios. Ratios indicating the liquidity position of the firm are Current ratio, Quick-ratio, Absolute-liquidity ratio. Turnover of Stock ratio, Turnover of Debtors and Creditors etc. Solvency ratios include Proprietory ratio, Debt-Equity ratio, Capital Gearing ratio, Reserves to Equity ratio, Interest coverage ratio, Cash-flow-debt service ratio, etc. Profitability ratios would cover Gross Profit ratio, Net profit ratio, Operating ratio, Return on capital employed, Expense ratios etc. Activity ratios which are intended to measure the effectiveness of the employment of resources comprise of Stock Turnover ratio, Debtors and Creditors Turnover ratios, Investments Turnover ratio etc. Market Test ratios comprise of Dividend Yield, Fixed Dividend cover, Capitalisation ratio, Price Earning ratio, Net Cash inflow etc.

Analysis of Short-term Financial Position or Tests of Liquidity

Though commercial Banks and other short-term creditors are primarily concerned with the analysis of short-term financial position or test of liquidity, it is a valuable aid to management in checking the efficiency with which working capital is being employed in the business. It is also of importance to shareholders and long-term creditors in determining to some extent at least, the prospects of dividend and interests payment. The questions to be studied in connection with the ratio analysis of the short-term financial position are :

(1) Will the company be able to pay its current debts promptly ?

(2) Is the management utilising capital effectively ?

(3) Is the current financial position improving ?

Current ratio (CR) : Also called working capital ratio, is the most widely used of all analytical devices based on the balance sheet. It establishes the relationship between total current assets and current liabilities. It is the barometer of general measure of liquidity and state of trading.

Formulation $\dfrac{\text{Current Assets}}{\text{Current Liabilities}}$

Current assets normally include cash in hand or at bank, marketable securities, other short-term high quality investments, bills receivable, prepaid expenses, work-in-progress, sundry debtors and inventories, while current liabilities are composed of sundry creditors, bills payable, outstanding and accrued expenses, income tax payable. At this juncture a problem arises as to whether a bank overdraft should be regarded as a current liability or not. In many cases, overdraft arrangement with the bank is more or less permanent and therefore, it is contended that overdraft should be treated as long-term liability to be excluded from the purview of current ratio. In spite of the fact that this sort of argument has a substantial degree of truth, the fact remains that overdraft facility may be cancelled by the bank at any time. Therefore in keeping with this reasoning coupled with the need for conservatism in dealing with a situation, it is advisable to include bank overdraft in current liabilities.

Current ratio indicates in a rough fashion the liquidity of current assets, or the ability of a business to meet its maturing current obligations, the state of trading, the margin of safety for short-term creditors, and the extent of capitalisation. The larger the amount of net working capital in relation to current liabilities, the position will be more favourable with reference to the ability of the business to meet current debts, fixed interest charges and dividend requirements as well as to absorb operating losses, declines in the value of inventory and temporary investments, excessive amounts of bad debts and cost of emergency events.

A current ratio of 2 : 1 is considered ideal as a rule of thumb. A criterion of hundred per cent margin of current assets over current liabilities is a precaution based on the practical knowledge of the possible shrinkage that may occur at any time in the property values of a business. But in actual practice 1 : 1 ratio is found acceptable than

2 : 1. A high ratio i.e. more than 2 : 1 say 3 : 1 indicates undertrading and the same also indicates one of the signs of overcapitalisation. Conversely, a low ratio indicates over-trading or undercapitalisation of business.

However one should not forget that current ratio suffers from the following limitations :

(*a*) Current ratios differ among various industries and also between manufacturers and retailers in the same line of business.

(*b*) All such current assets are treated alike but they are not equally or readily realisable in cash to meet the demand of the total current liabilities.

(*c*) The credit given to the debtors and available from the creditors in a particular business can affect the position of this ratio.

If these periods are different the desirable ratio would also differ while calculating this ratio, the analyst should observe the following guidelines :

(i) Current assets and current liabilities should be properly valued. Loose tools though called current assets are not included.

(ii) Reserves and other accounts relating to the valuation of current assets are deducted from the total current assets.

(iii) Contingent liabilities by way of discounted bills receivable should be given proper consideration in the study of current ratio. All bills receivable whether discounted or not are treated as current assets while at the same time, discounted bills receivable are treated as current liabilities. In so far as a business is contingently liable in the event of a default on discounted bills at maturity, such a procedure gives realistic and accurate idea of the current financial position.

(iv) As regards investments, note the purpose behind them, if they are not made for immediate cash realisation, then exclude them from current assets.

(v) The analyst must be on the look-out for signs of what is called ' window-dressing ' which connotes the practice of showing current assets and current liabilities in a manner so as to present a more favourable current ratio than the actual one. This may be done by manipulating the value of inventory, recording an advance cash receipts applicable to the next accounting periods, sale of merchandise, treating a short term obligation as a long term debt. Similarly a balance sheet may be ' window-dressed ' when the business has numerous special sales to reduce its inventory at the close of the accounting period. In such cases, the cash position will be adversely affected immediately after the closing date and current ratio will not be representative of the position during the year. It is therefore dangerous to use current ratio alone as a sole index of liquidity.

Quick ratio (QR) or Acid-test ratio (ATR) : It is a refinement of the current ratio, and a second testing device for the working capital position. It is concerned with the relationship between liquid assets and liabilities.

Liquid assets would include cash, debtors after providing for bad and doubtful debts and securities which can be realised without difficulty. Liquid or quick liabilities refer to current liabilities less bank overdraft i.e. creditors, bills payable, outstanding or accrued expenses. Stock-in-trade is excluded from quick assets because it is usually a less liquid current asset and is considered to be the graveyard of the business. Prepaid expenses are also excluded from the list of quick assets because they are not expected to be converted into cash.

Formulation $\dfrac{\text{Liquid or Quick Assets}}{\text{Liquid or Quick Liabilities}}$

A quick ratio of 1 : 1 is usually considered to be ideal. In so far as it eliminates inventories as a part of current assets in the calculation of ratio, acid-test is a more rigorous test of liquidity than the current ratio and when used in conjunction with it, gives a better picture of the firms' ability to meet its short-term debts out of short-term assets. However, care must be exercised in placing too much reliance on a 100 per cent acid-test ratio without further investigation. This is so because the interpretation of the acid-test ratio, depends on circumstances. For example a seasonal business which seeks to stabilize production will tend to have a weak acid-test ratio during its period of slack sales, and probably a powerful one during the period of heavy selling.

Absolute liquidity ratio : Also known as Cash Position Ratio, relates the sum of cash and marketable securities to the total quick liabilities. It gives a more meaningful measure of liquidity when used in conjunction with current and acid-test ratios. Determination of the rate at which various short-term assets are converted into cash is another important dimension of liquidity and has, therefore often been a concomitant of the analysis of short-term financial position. A ratio of 0.75 : 1 is considered to be safe. Following ratios are also included in this category :

(*a*) *Inventory Turnover Ratio or Stock Velocity Ratio or Stock Turnover Ratio* establishes the relationship between the cost of goods sold during a given period and the average stock holding or outstanding during that period. i.e. it tells us, as to how many times stock has turned (sold) over the period. This ratio indicates the operational and marketing efficiency of the business. It not only helps in determining the liquidity of the firm but also assists in evaluating inventory policy so as to protect the firm from any danger of overstocking.

Normally, inventory turnover rate is best expressed through the relationship between cost of goods sold and average inventory at cost, but ratio of sales to inventory may also be used as a substitute for the rate of cost of goods sold to average inventory, in case, cost of goods sold is not available. Besides these methods, some firms like departmental stores, customarily valuing their inventories at selling prices, compute inventory turnover ratio as the ratio between net sales and average inventory at selling prices.

The average inventory for a year is the sum of inventory at the beginning of the year and inventory at the end of the year the total is to be divided by 13. For greatest accuracy or calculation of inventory turnover ratio, monthly inventories should ordinarily be used and this is specially desirable, if the size of inventories fluctuates substantially in the course of the year. However in most cases the external analyst has to be satisfied with the inventory at the end of the accounting period or the average inventory at the begining and end of the accounting period.

A low inventory turnover may reflect dull business, over investment in inventory, accumulation of merchandise at the end of the period in anticipation of higher prices or of greater sales volume, incorrect inventory resulting from the inclusion of obsolete and unsaleable items, an unbalanced inventory which means excessive quantities of certain inventory items in relation to immediate requirements, inflated inventory valuation, or a change in the distributive functions performed by the business or the management of a retail business may be entering the manufacturing or wholesaling phase of business.

A high turnover of inventory may not be accompanied by a relatively high net income as, profits may be sacrificed in obtaining a large sale volume with the result that a higher rate of turnover is likely to prove less profitable than a lower turnover unless accompanied by a larger total gross profit although the rate of gross profit may well be the same or even slightly lower. Such a situation may arise when the selling price of goods is lowered to increase the turnover of inventory or due to disproportionate increase in selling and administrative expenses. Similarly a relatively high turnover ratio may not really be an indicator of favourable results as it may indicate serious under-investment in inventories and this may in turn result in loss of customer patronage on account of inability to show complete lines or the failure to make prompt deliveries.

(*b*) *Debtors Turnover Ratio or Debtors Velocity or Receivables Turnover Ratio* as it is called explains the relationship of net (credit) sales of a firm to its book debts indicating the rate at which cash is generated by turnover of receivables or debtors. However, this is not immediately apparent from the debtors turnover ratio and therefore, it has to be supplemented by Average Collection Period.

Formulation

$$\text{Debtors Turnover Ratio(DTR)} = \frac{\text{Trade Debtors}}{\text{Sales per day}}$$

$$\text{Sales per day} = \frac{\text{Net Sales}}{\text{No. of working days}} \quad \text{or}$$

$$\text{Day's Sales uncollected} = \frac{\text{Trade Debtors}}{\text{Net Sales}} \times \text{No. of working days (360)}$$

The term, trade debtors for the purpose of this ratio is used in a comprehensive sense and also includes the amount of bills receivable along with book debts at the end of the accounting period. Moreover debtors which do not arise from regular sales should be excluded e.g. a bill receivable from the buyer of fixed assets. Sometimes, the ratio is computed from the average of debtors at the beginning and at the end of the year. Another important point in connection with the ratio is that Reserve for Bad and Doubtful Debts is not deducted from the total amount of trade debtors.

Due to the absence of the break-up of sales into cash and credit, the analyst has to use total sales for computation of the ratio with the result that, to the extent cash sales are included, the ratio tends to be overstated. So far as the calculation of daily sales are concerned, the denominator is to be the number of working days of the business during the year and, while it is customary to use 360 days basis rather than 365 days exact, some writers are of the opinion that the denominator should only be 300 days owing to the remainder days being holidays, when no business is transacted.

The purpose of this ratio is to measure the liquidity of the receivables or to find out the period over which receivables remain uncollceted i.e. ageing of receivables. Since debtors constitute a major element of current assets, the credit and collection policies of the business must be under continuous watch. The amount of trade debtors at the end of the accounting period should not exceed a reasonable proportion of net sales. The larger the amount of trade debtors in relation to net sales, the greater would be the expense in connection with uncollectable accounts. An over-investment in receivables may be the result of over-extension of credit, liberalisation of credit terms, ineffective credit investigations, lack of effective collection policies or the inability of the collection department to make collection in periods of depression.

A variation in the ratio of net sales to trade debtors from year to year or as between companies, may be caused by specific factors such as, change in terms of sales, inclusion or exclusion of cash and instalment sales, special sales campaign at the end of the accounting period, sales made directly to consumers or middlemen, price changes, the effectiveness of credit collection and sales department, strikes and lock-outs and the stage of business cycle at the time when the ratio is determined.

Analysis of Long-term Financial Condition or Test of Solvency

While bankers and other short-term creditors are most interested in the current debt-paying ability of a business, shareholders and debenture-holders are mainly concerned with the long-term financial prospects. However neither of the groups will ignore the financial aspects of primary interest to the other, so that both these groups concern themselves with current and non-current sections of the balance sheet as well as current and prospective earnings.

Debt-Equity ratio : relates all recorded creditors' claims on assets to the owners' recorded claims in order to measure the firms obligations to creditors in relation to funds provided by the owners. It is also known as 'External-Internal Equity ratio' as it establishes the relationship between outsiders funds and shareholders funds.

Formulation

$$\text{Equity Ratio} = \frac{\text{Equity}}{\text{Total Assets}}$$

$$\text{Debt Ratio} = \frac{\text{Debt}}{\text{Total Assets}}$$

$$\text{Debt-Equity Ratio} = \frac{\text{Debt/Total Assets}}{\text{Equity/Total Assets}} = \frac{\text{Debt}}{\text{Equity}}$$

$$\text{i.e.} \quad \frac{\text{External Equities (Long-term}+\text{Short-term)}}{\text{Internal Equities (Equity}+\text{Pref.}+\text{Reserves}+\text{Surplus)}}$$

The External equities include all debts whether long-term or short-term or whether in the form of mortgages, bills or debentures, while the Internal equities consist of preference share capital, equity share capital, capital reserve, retained earnings and any reserves representing earmarked surplus like reserve for contingencies, reserve for plant expansion etc.

In some financial circles, this ratio is also computed with preference shares classed as creditors rather than as ownership claims, because preference shares are ownership commitments only in the eyes of law and usually do not exhibit the characteristics of an ownership security. Thus there are differences of opinion regarding the treatment of preference shares as a creditor or ownership claim which depends upon the nature of preference shares and the purpose of financial analysis.

The purpose of Debt-Equity ratio is to give a picture of the amount of capital supplied to the firm by the owners and of the asset 'cushion' available to creditors on liquidation. The interpretation of the ratio however depends almost entirely on the financial and business policy of the enterprise. However a Debt-Equity ratio of 1 : 1 is ideal and acceptable. Normally, higher the interests of the proprietor as compared with that of the creditors, the sounder would be the financial structure, but this should not be treated as a generalisation. In the analysis of long-term financial condition of a business, this ratio enjoys the same importance as the current ratio in the analysis of short-term financial position.

Proprietory Ratio : This ratio establishes the ralationship between the proprietor's funds. (equity + preference + capital reserves + free reserves + undistributed profits) and total assets. It is also called as net worth to total assets ratio,

$$\textit{Formulation}\ \frac{\text{Proprietor's Funds}}{\text{Total Assets}}$$

$$\text{or}\ \frac{\text{Capital employed}}{\text{Total Liabilities}}$$

The Proprietorship ratio is further analysed into : (i) Ratio of Current Assets to Proprietors' Funds and (ii) Ratio of Fixed assets to Proprietors' Funds.

(i) Ratio of Current Assets to Proprietors' Funds : This is obtained by dividing the value of current assets by the amount of proprietor's funds.

$$\text{i.e.}\ \frac{\text{Current Assets}}{\text{Proprietor's Fund}}$$

The purpose of this ratio is to show the percentage of proprietor's fund investment in current assests. A higher proportion of current assets to proprietor's fund, as compared with the proportion of fixed assets to proprietor's funds is advocated, as it is an indicator of the financial strength of the business. However, different industries have different standards and history of a particular concern must be studied before too great a reliance is placed on this ratio. This ratio must be read along with the results given by the Fixed Assets to Proprietorship Funds ratio.

(ii) Ratio of Fixed Assets to Proprietors' Funds : It is obtained by dividing the depreciated book value of fixed assets by the amount of proprietors' funds.

$$\text{i.e.}\ \frac{\text{Fixed Assets}}{\text{Proprietors' Funds}}$$

This ratio shows the extent to which ownership funds are sunk into assets with relatively low turnover. When the amount of proprietors' funds exceed the value of fixed assets, a part of the net working capital is provided by the shareholders, provided there are no other non-current assets, and when proprietors' funds are less than the fixed assets, creditors obligations have been used to finance a part of the fixed assets. The yardstick for this measure is 65 per cent for industrial undertakings.

It is a sound principle that proprietors should subscribe sufficient capital to cover fixed assets, intangible assets, investments in other companies and a reasonable figure for working capital. Some analyst deduct intangible assets from the proprietors funds, but this would depend upon the realisable value of intangibles and the purpose of analysis. Losses should also be deducted and funds payable to others should not be added.

A ratio of 0.75 : 1 (or 75 %) is deemed to be a desirable one. A higher ratio say 100 per cent means that there are no outside liabilities and all the funds employed are those of shareholders. In such a case the return to shareholders would be a lower rate of dividend and this is also a sign of ' over-capitalisation '.

Interest Coverage Ratio also known as Debt service ratio is determined by dividing Net profit by fixed interest charges. Net Profit for the purpose of this ratio means Net profit before deduction of Interest and Income tax.

Formulation

$$\frac{\text{Net Profit before deduction of Interest \& Income tax}}{\text{Fixed Interest Charges}}$$

This ratio indicates the financial ability of the enterprise to meet interest payment out of current earnings. Fixed interest charges should be covered by six to seven times.

Cash Flow-Debt-Coverage Ratio : This ratio gives an idea of firms' long-term liquidity position by which it meets its interest charges out of operational cash flow of that period. This observation is subject to the fact, that apart from interest expenses, a sinking fund is often required and unless this is discretionary, it represents a fixed obligation of the firm with the consequence that, to be more accurate, annual cash flow before interest ought to be related to the sum of interest payments and sinking fund appropriations. As a matter of fact, cash flow before interest and taxes should cover services of debt interest and sinking fund by at least an average number of times so that the charges are covered once by even the worst expected annual cash flow. Firms characterised by instability of earnings will need a larger average while those with stable earnings, will need a small coverage.

Formulation

$$\text{CFCD} = \frac{\text{CF}}{\text{I} + \frac{\text{SFD}}{\text{I—T}}}$$

where CFCD — Cash flow coverage of Debt.

CF — Annual Cash flow before interest and taxes.

I — Interest Payments.

T — Income tax Rates.

SFD — Sinking Fund appropriation on Debt.

Test of Profitability

Gross Profit Ratio : It expresses the relationship of gross profit to net sales, in terms of percentage, representing the percentage of gross profit earned on sales. Sales for this purpose means net sales i.e. sales after deducting the value of goods returned by the customers. Gross profit results from the difference between net sales and cost of goods sold without taking into account expenses generally charged to profit and loss account. Cost of goods sold in the case of a trading concern is the purchase of goods and all expenses directly connected with the purchase of goods, while in the case of a manufacturing concern, it consists of the purchase price of raw materials and all manufacturing expenses.

Formulation $$\frac{\text{Gross Profit}}{\text{Net Sales}} \times 100$$

This ratio is a measure of general profitability of the business and a tool that indicates the degree to which selling prices of goods per unit may decline without resulting in losses on operations for the firm. The gross profit should be adequate to cover the operating expenses and to provide for fixed charges, dividends and building up of reserves.

A low gross profit ratio may indicate unfavourable purchasing and mark-up policies, the instability of management to develop sales volume thereby making it impossible to buy goods in large volume ; marked reduction ir selling prices not accompanied by proportionate decrease in cost of goods. over expansion or over-investment in plant facilities, unfavourable property locations, and excessive competition.

On the other hand an increase in the gross profit ratio may reflect an increase in the sale price of goods sold without any corresponding increase in costs ; a decrease in cost without its impact on the sale price of goods, stock at the commencement of the trading period valued at a figure lower than it should have been, artificial inflation of sales figures by inclusion therein of goods sent on consignment, while the same are included in closing stock, over-valuation of stock of goods at the end of the accounting period, omission of purchase invoices from accounts. There is no rigid standard to this ratio. Normally 25 per cent to 30 per cent margin is anticipated.

Operating Ratio (OR) : Matches cost of goods sold plus other operating expenses on one hand, with net sales on the other. Operating expenses consists of selling and distribution, administrative expenses and financial expenses.

Formulation $$\frac{\text{Cost of goods sold + Operating expenses}}{\text{Net Sales}}$$

This ratio is calculated mainly to ascertain the operational efficiency of the management in their business operations, as it shows the percentage of net sales that is absorbed by the cost of goods sold. Higher the operating ratio, the less favourable it is because it would leave a smaller margin to meet interest dividends, and other corporate needs. In general, for manufacturing concerns, operating ratio is expected to touch a percentage of 75 per cent to 85 per cent. This ratio can also be used as a partial index of over-all profitability but cannot be used as a test of financial condition.

Expense Ratios : These ratios supplement the information given by the operating ratio. They are calculated by dividing net sales into each individual operating expenses (selling, administrative and general expenses) indicating the portion of the net sales revenue which is consumed by the various operating expenses.

i. e. (1) Material Consumed Ratio =

$$\frac{\text{Materials Consumed}}{\text{Net Sales}} \times 100$$

(2) Conversion Cost Ratio =

$$\frac{\text{Labour \& Manufacturing Expenses}}{\text{Net Sales}} \times 100$$

(3) Office & Adimistrative Expenses Ratio =

$$\frac{\text{Office \& Administrative Expenses}}{\text{Net Sales}} \times 100$$

(4) Selling & Distribution Expenses Ratio =

$$\frac{\text{Selling \& Distribution Expenses}}{\text{Net Sales}} \times 100$$

The total of these four ratios will be equal to the Operating Ratio

(5) Financial Expenses Ratio =

$$\frac{\text{Financial Expenses}}{\text{Net Sales}} \times 100$$

(6) Non-Operating Exepnditure Ratio =

$$\frac{\text{Non-Operating Expenses}}{\text{Net Sales}} \times 100$$

These ratios which represent a summation of changes in net sales and in the expense items are valuable in comparing similar business or operating data from year to year for the same business.

Operating Profit Ratio : This ratio establishes the relationship between operating profit and net sales and is calculated as follows.

$$\frac{\text{Operating Profit}}{\text{Net Sales}} \times 100 \quad \text{(or)}$$

100—Operating ratio

For calculating this ratio, non-operating expenses and non-operating incomes are ignored. This ratio indicates the portion remaining out of every rupee worth of sales after all operating costs and expenses have been met.

Net Profit Ratio : It expresses the relationship between net profit after taxes to net sales. This ratio is widely used as a measure of over-all profitability and is very useful to proprietors, as it gives an idea of the efficiency as well as profit ability of the business to a limited extent. It differs from the operating ratio in the sense it is calculated after adding non-operating income like interest or dividends on investments etc. to generating profit and deducting non-operating expenses such as loss on sale of old assets, provision for legal damages, etc. from such profit.

Tests of Overall Profitability

Return on Shareholders' Investment : Also called Return on Proprietor's Funds is the ratio of net profit (after tax and interest) to proprietor's funds. It is invariably calculated by the prospective investor in the business to find out whether the investment would be worth-making in terms of return as compared to the risk involved in the business.

Formulation

$$\frac{\text{Net Profit (after tax and interest)}}{\text{Proprietor's Fund}}$$

Shareholders investment includes all categories of share capital, capital reserves, contingency reserves, all revenue reserves, undistributed profits. Normally the average of the figures relating to shareholders' investments in the opening and closing balance sheets are considered while computing this ratio. Net profit for the purpose represents the net profit after tax and interest on long-term liabilities.

Return on capital is one of the effective measures of the profitableness of an enterprise. The realisation of a satisfactory net income is the major objective of a business and this ratio shows the extent to which this objective has been achieved. This ratio is also used in making inter-firm comparison.

Return on Equity Capital : Another aspect to be considered in the overall profitability is the rate of return on equity capital employed, which relates the net profits available to equity shareholders to the amount of capital invested by them. Sometimes the return on equity capital is expressed in terms of earnings per share. In order to calculate the earnings per equity share, the net profit available to equity shareholders is divided by the number of outstanding Equity shares.

Formulation

$$\frac{\text{Net Profits } \textit{minus} \text{ Dividend due to Preference Shareholders}}{\text{Equity Share Capital}}$$

(or)

Earnings per Equity Share =

$$\frac{\text{Net Profit } \textit{minus} \text{ Dividend due to Preference Shareholders}}{\text{Number of Equity Shares}}$$

For the purpose of calculating this return, net profits are arrived at after deducting the dividend due to preference shareholders if any. Moreover if the preference shareholders have a right to participate further in the profits after a certain rate of dividend has been paid to equity shareholders, such participating dividend would also have to be subtracted in order to arrive at profits due to equity shareholders.

This rate of return is designed to show what percentage, the earned profit of the period bears to the amount of capital invested by equity shareholders. It is used to compare the performance of company's equity capital with those of other companies, and thus help the investor in choosing a company with higher return on equity capital.

Return on Capital Employed : This ratio is the most appropriate indicator of the earning power of the capital employed in the business. It also acts as a pointer to the management, showing the progress or deterioration in the earning capacity and efficiency of the business.

Formulation

$$\frac{\text{Net Profit before Taxes and Interest on Long-Term Loans}}{\text{Capital Employed}}$$

The capital employed in a business may be defined in a number of ways but, the two most widely accepted definitions are ' Gross capital employed ' and ' Net Capital employed '. Gross capital employed comprises the total assets used in the business while Net Capital employed consists of total assets of the business less its current liabilities i.e. it covers capital, capital reserves, revenue reserves (including profit and loss account balance) and long-term loans such as debentures. Another interpretation of the term is Proprietor's Net Capital Employed which has already been elaborately dealt with under-return on shareholders investment. The Interpretation to be brought into play depends upon the purpose for which 'capital employed' figure is to be used. If the purpose is to show to the shareholders what is being earned for them, the use of Proprietors Net Capital Employed or the Return on Shareholder's Investment is advocated. However for studying the economics of a particular line of business or for evaluating the efficiency of internal management gross or net capital employed concept is more appropriate. It is always better to use them together and also to supplement the conclusions desired by calculating the return on shareholder's investment so that these criteria of management efficiency are put to test in concert. Return on capital employed is the only measure which can show satisfactorily the overall performance of an undertaking from the standpoint of profitability the benefits being obtained in the shape of income for the sacrifice involved in the form of capital invested. It enables the management to show whether the funds entrusted to it have been properly used or not. Thus it can become an integral part of the budgetary control system in order that the management may be able to follow the progress being made and to take corrective action if necessary.

The following points must be borne in mind while calculating capital employed :

(i) All fixed assets, like land and buildings, plant and machinery, furniture and fittings, motor vehicles, etc should be included, either at the written down value (i.e. net value) or replacement cost. The former represents gross value of assets less depreciation written-off to date while the latter one is ascertained with reference to reliable published index numbers or on valuation of experts, which reflects the current value of fixed assets. In case replacement cost basis is adopted, it would call for the calculation of the provisions for depreciation because charges in the profit and loss account would be based on original cost of the assets.

If any assets are idle for considerable period e.g. due to obsolescence or short working, it is considered advisable to exclude them from capital employed. However stand-by plant and equipment essential to the normal running of a machinery should not be excluded.

(ii) Intangible assets, like goodwill, patents, and trade marks are generally excluded unless they have potential sale value, because intangible assets should be written off as quickly as possible.

(iii) Where investments have been made outside the business they are to be excluded but those made for the bonafide purposes of the business are included.

(iv) Fictitious assets like preliminary expenses, accounts of deferred revenue expenditures are excluded.

(v) All stocks of raw materials, work-in-progress and finished goods are included in capital employed valuing them on a consistent basis, generally at cost.

(vi) Normal trade debtors are included in capital employed after taking into account provisions for doubtful debts.

(vii) Any balance at bank in excess of the normal requirements of a business may be excluded.

If the 'net capital employed' has been calculated from the asset side, half of the profits earned during the year are deducted in order to arrive at 'average net capital employed'. In case, 'net capital employed' is being computed with the help of items on the liabilities side, of which profit and loss account is one, then, half of the profits earned during the year have to be subtracted for obtaining the figure of 'average net capital employed', but if profit and loss account is not one of the items on the liabilities side, this portion of profits, is to be added for reaching 'average net capital employed'. However if the concept used is 'Gross capital employed', no such adjustment is necessary.

The logic behind using this concept of 'average capital employed' is that usually a business earns profits all through the year and the same remains in the business, and only at the end of the year they are distributed as dividends, with the consequence this factor has to be reckoned with.

Income or net profits, for the purpose of computing return on capital employed, will be subject to the following adjustments:

(*a*) Any abnormal or non-recurring losses or gains (*b*) Depreciation based on the replacement cost of the assets.

(*c*) Income from investments outside the business.

(*d*) As long-term liabilities are included in capital employed interest on such liabilities should be added back to the 'net profits' for sake of consistency. In case of 'gross capital employed' even interest on short-term liabilities if any should be added back because such liabilities are part of gross capital employed.

(*e*) 'Net Profits' to be taken into consideration should be one before payment of income-tax so that income-tax paid or provision for tax, made in the accounts has to be restored to profits. This is because tax has nothing to do with the earning capacity of the business and is paid after the profits have been earned.

Return on Total Resources : This ratio acts as an yardstick to assess the efficiency of the operations of the business as it indicates the extent to which assets employed in the business are utilised to result in net profits.

Formulation

$$\frac{\text{Net Profit}}{\text{Total Assets}} \times 100$$

Dividend Yield : It refers to the percentage or ratio of dividend paid per share to the market price per share. This ratio throws light on the effective rate of return on investment which potential investors may hope to earn.

Formulation

$$\frac{\text{Dividend (in Rs.) paid per Equity Share}}{\text{Market price per Equity Share}}$$

Preference Dividend Cover : It indicates how many times the preference (fixed) dividend is covered by profits after tax. This ratio measures the margin of safety for preference shareholders. Such investors normally expect their dividend to be covered about three times by profits available for dividend purposes.

Formulation

$$\frac{\text{Profit after tax}}{\text{Annual Preference Dividend}}$$

Equity Dividend Cover : This ratio indicates the number of times the dividend is covered by the amount of profit available for equity shareholders i.e. net profit after tax less preference dividend. Higher the dividend cover, the higher is the extent of retained earnings and higher is the degree of certaintiy that dividend will be repeated in future years also. A typical standard cover is 2 i.e. out of every Rs. 100 profits available for dividend, Rs. 50 is distributed and Rs. 50 is retained and ploughed back in the business.

Formulation

$$\frac{\text{Net Profit (after tax)—Preference dividend}}{\text{Dividend Paid on Equity Capital}} \quad \text{(or)}$$

$$\frac{\text{Earnings per Equity Share (Rs.)}}{\text{Dividend per Equity Share (Rs.)}}$$

Price-Earning Ratio : It shows how many times the annual earnings the present shareholders are willing to pay to get a share. This ratio helps investors to know the effect of earnings per share on the market price of the share. This ratio when calculated for several years can be used in trend analysis for predicting future price earning ratios and therefore, future stock prices.

Formulation

$$\frac{\text{Average Market Price per share}}{\text{Earnings per share}}$$

Capitalisation Ratio (*Earnings Price Ratio*) : indicates the rate at which the stock exchange investors are capitalising the value of current earnings,

Formulation

$$\frac{\text{Earnings per share}}{\text{Average Market price per share}}$$

Pay-out Ratio : This ratio indicates the proportion of earnings available which equity shareholders actually receive in the form of dividend. An investor primarily interested should invest in equity shares of a company with high pay-out ratio. A company having low pay-out ratio need not necessarily be a bad company. A company having income may like to finance expansion out of the income earned and thus have low pay-out ratio. An investor interested in stock-price appreciation may well invest in such a company eventhough the pay-out ratio is low.

Formulation

$$\frac{\text{Dividend paid per share (Rs)}}{\text{Earnings per share (Rs)}} \times 100$$

The reverse of the pay-out ratio is the ratio of profit retained to profit earned.

Creditor's Velocity Ratio : This ratio shows the velocity of the debt discharged by matching annual credit purchases to the outstanding payables (both trade creditors plus bills payable) at the accounting date.

Formulation

Creditors or Payable Ratio =
(Number of times in a year)

$$\frac{\text{Net (Credit) Purchases}}{\text{Average or year end payables}}$$

Average Payment Period =
(Number of days in year)

$$\frac{\text{Payables}}{\text{Net Credit Purchases}} \times 365$$

Smaller the payables ratio, the greater is the credit period enjoyed and consequently larger the benefit reaped from credit suppliers.

Analysis of Capital Structure

Capital Gearing ratio : The term capital gearing is used to describe the relationship between Equity share capital (including all reserves and undistributed profits) and fixed interest/dividend bearing securities of a company. Fixed interest bearing securities are debentures, public deposits, mortgage loans, Preference shares etc.

Formulation

$$\frac{\text{Equity Capital}}{\text{Fixed interest/dividend bearing securities}}$$

Gearing is said to be high if capital carrying fixed rate of interest/dividend is more than the equity capital. Similarly, gearing is low if capital carrying fixed rate of interest/dividend is less than equity capital. When both the capitals are equal it is said to be evenly geared. Thus, the gearing is in inverse ratio to the Equity share capital i.e.

High Gear = low Equity share capital
Low Gear = high Equity share capital

The capital gearing also reveals the suitability or otherwise of the company's capitalisation that is to say,

Equity Capital > Loan Capital → Overcapitalisation = low gearing
Equity Capital < Loan Capital → Undercapitalisation = high gearing
Equity Capital = Loan Capital → Optimum capitalisation = even gear

Whether or not high gear ratio is good for the enterprise will depend upon its profitability trend. Thus if a company can forsee a trend of continuous increase, relatively more and more profit will be available to equity shareholders as compared to preference shareholders or debentureholders. In such a case a high gearing would be better. Capital gearing is not only important to prospective investors but also to the company because it affects distribution policies, the building of reserves as well as a stable dividend policy. Hence it must be properly planned.

This ratio together with the debt to equity ratio are by far, the most important means of the analysis of the capital structure. The following ratios are also used to throw light on certain aspects of the capital structure.

(i) Totals Investment to Long-Term Liabilities : this is computed by comparing share capital and loan capital. It makes a different approach to the method of financing the business and is based on the principle that there should not be too high a proportion of long-term liabilities.

(ii) Current Liabilities to Proprietor's Funds : this ratio relates the amount of current liabilities to proprietors' funds. It measures the amount of funds raised by the proprietors as against those raised by short-term borrowings. A high ratio indicates that the firm will be slow in paying its bills because, if the owners have not put enough of their own funds in the business, suppliers of long-term funds would be unwilling to expose themselves to the risks and the firm will have to resort to short-term stop-gap financing to a large extent. The standard for this ratio is 35 per cent.

(iii) Ratio of Reserves to Equity Capital: this ratio establishes relationship between reserves and equity capital. It is important in as much as it reveals the policy pursued with regard to growth of shares. If a conservative policy regarding the distribution of dividends is followed, the ratio may be unduly high. It also indicates the extent to which value of equity shares has gone up by ploughing back of profits.

Some of the important ratios which measure the overall efficiency are :

(1) Fixed Assets Turnover: this ratio establishes the relationship between Net sales and Fixed Assets. Some writers advocate the use of this ratio on the ground that, since the investment in fixed assets is made for the ultimate purpose of sales, this ratio is a measure of the achievement of that purpose. If it is too high, there is an indication that the firm is overtrading on its assets, but in case the ratio is low, it signifies that the firm has an excessive investment in fixed assets and the financial manager must scrutinize the requests for additional capital asset purchases.

Formulation

$$\frac{\text{Net Sales}}{\text{Total Fixed Assets}}$$

(2) Working Capital Turnover: In order to list the efficiency with which net working capital is utilised, many analysts determine the ratio of net sales to net working capital i.e. the turnover of working capital. It is computed by dividing the net working capital into net sales indicating whether the business is being operated on a small or larger amount of net working capital in relation to sales. Larger the net sales in comparison with net working capital, the less favourable the situation is likely to be, if the resultant net working capital turnover has been made possible by the use of an excess amount of credit. The real danger lies in the possibility of a decline in sales due to unforeseen circumstances, like cancellation of orders, depressions, strikes, and competition.

A high working capital turnover may be the result of favourable turnovers of inventories and receivables or may reflect an inadequacy of net working capital accompanied by low turnovers of inventories and receivables. On the other hand, a low turnover of net working capital may be the outcome of an excess of net working capital, slow turnover of inventories and receivables, a large cash balance or investment of working capital in the form of temporary investments. Thus in interpreting the net working capital turnover, the analyst should exercise considerable caution because the working capital turnover ratio is a composite of a number of relationships, each one of which should be analysed carefully to account for changes from year to year or between companies.

Formulation

$$\frac{\text{Net Sales}}{\text{Net Working Capital}}$$

Where Net Working Capital refers to Current Assets—Current liabilities.

(3) Ratio of Operating Profit to Total Operating Assets: The profitability of an enterprise may be measured by relating the operating profit to total operating assets used in the regular conduct of the business.

Formulation

$$\frac{\text{Operating Profit}}{\text{Total Operating Assets}}$$

The operating profit figure should not include other income and expenses, income tax or extraordinary items. The total operating assets figure should include all assets except long-period investments and other assets not used in connection with obtaining a major revenue or sale income. The accumulated provision for depreciation must be deducted from the assets.

This ratio is an index of the economic productivity of the funds invested in the business and is an over-all measure of the efficiency of business. It shows the earnings on assets independently of the sources of funds invested in them. However, caution must be exercised in studying this ratio for different companies because of the possible presence of uncomparable data arising due to variations in asset valuation and amortisation methods, differences in the composition of assets, income and expense items, different accounting periods and different depreciation and amortisation policies.

(4) Total Assets Turnover : This is calculated by dividing net sales by the value of total assets.

Formulation

$$\frac{\text{Net Sales}}{\text{Total Assets}}$$

A high ratio indicates overtrading of fixed assets while a low ratio shows a symptom of idle capacity i.e. excessive investments. The standard for the ratio is two times.

Fund-Flow Statements

'A statement of Sources and Application of Funds is a technical device designed to analyse the changes in the financial condition of a business enterprise between two dates.' It is also called the fund flow statement as it portrays the sources and application of working capital and highlights the basic changes in the resources and financial structure of a concern. This statement is intended to supplement and not to supplant, the balance sheets and profit and loss account in whole or in part.

Fund flow statement is a useful tool in the financial manager's analytical kit. The important objectives of this statement are :

(i) to indicate the results of current financial management.

(ii) to lay emphasis on the most significant changes that have taken place, during a specific period.

(iii) to show how general expansion in a business has been financed or to describe the sources from which additional funds were derived.

(iv) to illustrate the relationship between profits from operations, distribution of dividend and raising of new capital or contracting of loans.

(v) to give recognition to the fact that a business exists on flow of funds and is not a static organisation.

The fund flow statement is becoming popular with the management, because it not only helps them in analysing financial operations, providing basis for comparison with budgets, and in serving as a tool of communication, but also explains the financial consequences of such operations, such as, the reason why the company is experiencing difficulty in making payments to creditors, or why the bank balance is getting thinner.

Before one proceeds to know the preparation of the fund flow statement, it is essential to have a clear cut idea about the difference between (i) Statement of Receipts and Payments and the Funds statement, and (ii) Cash flow and the Fund flow statements.

The statement of receipts and payments contains a summary of inward and outward movement of cash which is only a part of the working capital, whereas the fund flow statement contains a summary of the inward and outward movement of all items affecting the working capital of a business.

Regarding the differences between cash flow and fund flow statement they can be outlined as follows :

(i) A cash flow statement records only cash receipts and cash payments while in a fund flow statement overall change in working capital is recorded.

(ii) The cash flow statement shows the causes for changes in cash position whereas the funds flow statement shows the causes for changes in working capital.

(iii) A fund flow statement is a flexible device designed to disclose and emphasise all significant changes in current assets and current liabilities but a cash flow is concerned with cash only.

(iv) Cash flow statement is appropriate for short range planning while fund flow is appropriate in short range and long-range planning.

Preparation of Fund Flow Statement : Generally speaking, the fund flow statement consists of two parts—viz. (i) Schedule of changes in working capital and (ii) Statement of sources and uses of funds.

The schedule analysing changes in working capital is prepared with the help of current assets and current liabilities of the two (periods) balance sheets one being the previous year i.e. opening balance sheet and other being current year i.e. closing balance sheet. An increase in the amount of any current asset in the current year in comparison to that in the previous year results in an increase in working capital. A decrease in the amount of any current asset in the current year in comparison to that in the previous year results in a decrease in working capital. Similarly current liabilities are also compared. i.e. an increase in any current liability in the current year in comparison to the previous year results in a decrease in the working capital and vice versa. Finally the total increase and total decrease is compared and the difference shows the decrease or increase in the working capital. An increase of working capital is the application of funds and decrease of working capital is the source of funds. In other words increase in working capital over a period implies generation of more working capital than the use thereof for various purposes over that period conversely occurs on a decrease in working capital.

After preparing the statement or schedule of working capital, statement of sources and application of funds is prepared with the help of the remaining items in the balance sheets of the two periods i.e. all non-current assets and non-current liabilities and other information. Any transaction increasing the amount of working capital is a source (inflow) of funds and decreasing this amount is an application (outflow) of funds.

Increase or decrease in working capital occurs only when a transaction causes a change in both the current and non-current items. Changes confined to either of these items do not alter the funds i.e.

- (i) Conversion of a current asset into another e.g. substitution of trade debtors by bills receivables, prepayment of expenses, collection of receivables etc.
- (ii) Increase or decrease in current assets accompanied by increase or decrease in current liability in same amount, offset each other and, therefore, cause no change in working capital ; yet working capital ratio changes, e.g. discharge of trade creditors, credit purchase of inventories etc.
- (iii) Replacement of a current liability with another e.g. substitution of trade creditors by bills payable.
- (iv) Exchange of non-current asset with another, such as acquisition of machinery for long term investment.
- (v) Substitution of a non-current liability with another e.g. conversion of debentures into shares.
- (vi) Exchange of non-crurrent assets with non-current liabilities for instance, purchase of land by issuing shares, or redemption of mortgage loan by foregoing building, offset each other and therefore cause no effect in working capital.

In other words, it may be said that working capital varies only when variation in current items is accompanied by a corresponding variation in any non-current items. Therefore, increase in working capital (source of funds) is indicated by increase in equities (share capital) and borrowings e.g. receipt of cash from the issue of shares, debentures, and decrease in non-current assets e.g. sale of land, buildings, machinery etc. similarly, decrease in working capital (uses of funds) is indicated by increase in non-current assets e.g. purchase of land plant, etc. and decrease in equities and long-term debts e.g. redemption of preference shares and debentures. To sum up, working capital analysis deals with flow of funds between current and non-current items.

The Principal Sources and Application of Funds are listed below :

Sources of funds

1. Funds from operation.
2. Issue of share capital.
3. Borrowing long-term loans such as debentures, mortgage, long-term deposits, etc.
4. Sale of non-current (fixed) assets e.g. land, building, plant, long-term investment, intangibles, etc.
5. Non-trading receipts such as dividend and interest earnings, gifts received, damages recovered in legal action etc.
6. Decrease in working capital (as per schedule.)

Uses of funds

1. Funds lost in operation (trading loss).
2. Redemption of preference shares.
3. Repayment of long-term loans.
4. Purchase of non-current (fixed) assets.
5. Non-trading payments e.g. loss arising from legal action, loss of cash by embezzlement, etc. and payment of taxes & dividends.
6. Increase in working capital (as per schedule).

Calculation of Funds from Operation: The current operations of the business are the most important single source of funds and in the long run they constitute the largest source of funds. The repayment of loans, purchase of plant, payment of dividends etc. must ultimately depend upon this source. Funds from operations which are internal in character are arrived after making adjustments in the net profit. These adjustments are necessary because the net profit has been determined after deducting non-cash expenses such as depreciation depletion charges, amortisation of fictitious and intangible assets like amount written off by way of preliminary expenses, goodwill, patents, discount on shares or debentures, premium on redemption of preference shares or debentures, deferred charges etc. and loss on sale of fixed assets charged to profit and loss account, which do not result in flow of funds. These transactions, in fact are book adjustments and do not involve use of resources, so the actual funds generated from operations are larger by the amount of such non-cash expenses. Similarly the non-trading or non-operating incomes like dividends and interest received from outside, or profit on sale of fixed assets, appreciation in the value of fixed assets will have to be deducted from net profit only if they have been considered already while preparing the profit and loss account. In short, funds from operations may be arrived at by deducting all non-cash credits (incomes) and adding back non-cash debits (expenses) to the Net Profit. If there has been a net loss as per profit and loss account, non-cash expenses have to be deducted therefrom and non-cash income added thereto.

While computing the funds from operations the following points may be borne in mind:

(1) Provision for tax may be treated either as a current or non-current liability. As a current liability, (i.e. as a charge on profit) provision for taxation is considered while preparing statement of working capital and not used for adjusting the profit made during the year for calculating the funds from operation and also tax paid during the year is not treated as an application of fund. As a non-current liability the provision for tax is treated as internal appropriation of profit and it is used for adjusting the profit made during the year and also tax paid during the year is treated as an application of fund.

(2) Proposed dividend is also treated like tax provision either as current or as non-current liability. But after the dividend is declared in general meeting, the amount becomes a current liability.

(3) Trade Investments should be treated as long term investments and they should not be included in statement of changes in working capital. However, if investments represent surplus fund temporarily invested in marketable securities, they are to be treated as current assets, and as such, are to be considered in determining working capital.

(4) When investments or fixed assets have been sold or purchased and provision for taxation have been increased and taxes have been paid, various ledger accounts should be prepared—Asset A/c; Accumulated Depreciation A/c; Investment A/c; Provision for taxation A/c, etc.

The final stage will cover the preparation of the statement of Sources and Uses of Funds, which portrays the sources or avenues through which funds have been obtained and the uses to which, they have been put.

To sum up, neither the balance sheet nor the income statement is capable of unearthing the entire complement of flow of resources for an accounting period in respect of which reports are prepared for the perusal of and appraisal by the top management or the owners. This indicates the potentialities of the funds statement as an analytical tool from the point of view of the management, for a comprehensive reporting on its performance.

** Jute in million bales of 180 kg.

Foodgrain Production

Estimates and Targets

(Crop year July-June) (Million tonnes)

Item	1984-85 (Estimates)	1985-86 (Targets)
Rice ..	60.0	63.5
Wheat ..	46.0	49.2
Coarse grains ..	31.5	33.0
Total Cereals ..	137.5	145.7
Pulses ..	12.5	13.5
Total Foodgrains ..	150.0	160.0
Of which :		
Kharif crop ..	86.5	89.0
Rabi crop ..	63.5	71.0

Output of Major Cash Crops

Crop Year : July-June

Crop		Unit	1984-85 (Estimate)	1985-86 (Target)
Oil seeds	..	Million tonnes	130.0	136.0
Sugarcane	..	Million tonnes	175.0	191.0
Cotton (lint)	..	Lakh bales (of 170 kg each)	78.0	83-85
Jute and mesta	..	Lakh bales (of 180 kg each)	78.0	85.5
Tea	..	Million kg.	645	655
Coffee	..	Lakh tonnes	17.0	14.6
Tobacco	..	Million kg.	420.0	..
Rubber	..	Lakh tonnes	18.6	..

Agricultural Production and Productivity

		Agricultural production index	Agricultural productivity index	Foodgrains production
		1967-70 = 100		Mn. tonnes

THE SAME EXPERTISE.
THE SAME WORLDWIDE
CONNECTIONS.
BUT A NEW STANDARD.

Standard Chartered

The change occured on January 1st, 1985.

The Chartered Bank took on the Group's full name and became Standard Chartered Bank.

Little else changed.

You'll still have the advantage of dealing with a bank that specialises in international business — and can meet its challenges and problems with more than ordinary efficiency.

You'll still have access, through any branch, to a worldwide service that extends from travellers cheques to major project finance, and from 24-hour-a-day currency dealing to all forms of finance for imports and exports. And behind our new nameplate, you'll still find the kind of personal and professional service that made the old one famous.

Indeed. Our service sets its own standards.

Standard Chartered

Direct banking, worldwide

Branches in India at Amritsar, Bombay, Calcutta, Calicut, Cochin, Kanpur, Madras, New Delhi, Vasco da Gama

BANKS

Nationalisation and its Aftermath

A sea-change has swept through the banking scene in the country since the nationalisation of 14 major commercial banks nearly 15 years ago and six more subsequently. Apart from registering more than 500 per cent growth in the number of branches with more than 60 per cent of them in rural areas, the banks were able to attract nearly 15 times more deposits amounting to over Rs. 65,000 crores during this period.

The growth of commercial banks, geographically too, has been spectacular. Of the 44,521 branches as on 31st March 1984, 67 per cent are in totally unbanked centres as a result of the new thrust to open branch offices in rural areas. The population per bank office which was around 65,000 at the time of nationalisation, has come down to less than 16,000 despite a substantial increase in the country's population during this period.

Functionally too, the change witnessed in the Indian Banking scene has been notable. Not only have these banks taken to new areas of lending by diversifying their operations, but also have taken to several novel banking activities. At the instance of the Centre, these banks took to priority-sector lending in a big way, offering credit to even cobblers and weavers. While over 60 per cent of the advances made by commercial banks at the time of nationalisation were for large and medium industries and advances to agriculture accounted for less than 2.5 per cent, the advances to the medium and large industries today account for less than 35 per cent and the advances to agriculture and allied activities have moved up to nearly 18 per cent.

The share of bank deposits in the financial savings of the household sector, which accounts for nearly 80 per cent of the total savings has risen from 18.1 per cent in 1970-71 to as much as 40 per cent in 1980-81. Thus with nationalisation, a big leap was made and a major change in the lending policy and building of the branch network has been achieved.

Branch expansion

The spread of the banking network in the past one and a half decades has been spectacular and perhaps it has no parallel anywhere in the world. From 8262 in July 1969, the total number of bank branches have risen to 44521 by the end of March 1984. The number of rural bank offices went upto 24,293 by the end of March 1984 from 1832 in June 1969 thus resulting in an increase of 32.5 per cent.

The data released by the Reserve Bank of India, showed that 22,416 offices opened since nationalisation were in unbanked centres bringing down the average population per bank office for the country as a whole from 65,000 in June 1969 to 15,000 by March 1984. The progress of commercial bank's branch expansion was well sustained in the relatively under-banked states of Assam, Bihar, Madhya Pradesh, Orissa, Rajasthan, Uttar Pradesh and West Bengal. Over 76 per cent of the 44,521 offices were in rural and semi-urban centres by March 1984. Banks were holding authorisation for opening 5566 branches in rural and semi-urban centres before March 1985. Though six more banks were nationalised subsequently, less than 50 per cent of 18178 new offices opened, were in unbanked centres. State Bank of India, the first Bank to be nationnalised and its associates ensured that 55.80 per cent of the new offices opened in the post June 1969 era were in unbanked centres.

Rural Banks

Even as commercial banks were expanding fast in rural areas and endeavouring to meet the credit requirement of farmers, artisans, small traders and other target groups, the Government came round to the view that because of the high cost of bank credit and the lack of rural orientation of the bank staff, a new agency would be necessary to meet the credit needs of small and marginal farmers, landless labourers and rural artisans. Out of this thinking emerged the concept of Regional Rural Banks (RRBs) and the first RRB was set up in October 1975. At the end of March 1983, there were 141 RRB's covering 245 districts in the country. The Dantwalla Committee had concluded that the Regional Rural Banks have been able to achieve the main objective of helping the weaker sections in the rural areas by providing credit to suit their requirements.

It was found that out of the total borrowers, 70 per cent were small and marginal farmers and landless labourers and 25 per cent were rural artisans, retail traders and unemployed persons. Therefore, despite the initial opposition of many states, it is proposed to set up 70 more Regional Rural Banks during the Sixth Plan period.

Overseas expansion

With 138 offices (including six off-shore centres) established in 21 countries, Indian banks entered a stage of take-off and are looking forward to another phase of sustained profitable operations. The failure of a large number of exchange companies in the West Asia has opened a new chapter in the history of overseas banking. The take over of the management of such companies by Indian banks will, besidies being profitable, enable them to restore the confidence of the non-resident Indians working in these countries. This is significant since the savings repatriated by the Indians abroad, today constitute single largest source of foreign exchange earning and covers about one half of the traed deficit.

It should be possible for the banking system to (a) mop up sizeable deposits by tailoring schemes that would suit their needs and (b) act as a funnel to the capital market which is likely to attract huge investments after the snags in the recently announced liberalised schemes are removed. Fortunately, Indian banks are not very much affected by the current turmoil in the international banking scene. This offers them an opportunity to consolidate their position and uphold the confidence of the international banking community. International Banking is indeed demanding and the efforts of Indian Banks have by and large been over the years directed towards developing higher degree of expertise to offer a wide variety of specialised activities such as wholesale banking, merchant banking, syndication of Euro-currency loans etc., and flexibility to operate in different environments.

The increasing foreign exchange outlays of the Indian industry, the banking needs of joint ventures abroad, the diversification of the trade pattern, as also, means of financing and the opening up of the Indian economy are throwing up opportunities to Indian banks which in turn necessitate greater thrust to their operations in the international banking centres.

The Reserve Bank has played a key role in guiding the business operations of commercial banks in tune with national socio-economic objectives set by the Government. Through its branch expansion policy, the Reserve Bank has encouraged commercial banks to open branches in rural areas and to diversify their credit portfolio to cover a spectrum of activities in order to achieve national objectives. It has introduced a scheme of refinance to enable commercial banks to meet the credit needs of the weaker sections for productive purposes. Besides, it has provided insurance support to commercial banks to overcome their inhibition in lending to small borrowers, by setting up the Deposit Insurance and Credit Guarantee Corporation of India.

* Estimates.

Deposit growth

Banks have, from the beginning, deposits of mainly three types viz., the current account deposits, saving bank deposits and fixed deposits. The total deposits of all the banks which were 4007 in number in 1956, amounted to Rs. 1159 crores. The Banks have later introduced the Recurring Deposit Schemes for the benefit of salaried class and also in the past one and a half decades, many new schemes under different captions tailored to the needs of several groups e.g. minors, house-wives, retired people, army personnel and non-resident clients, agriculturists and small depositors. Bank facilities are now available to all categories of people whether in urban centres or rual areas and to those who could save even very small amounts.

A wider range of facilities is now available to non-residents of Indian origin also for remitting their savings and depositing with banks in India on a remunerative basis. With the vast network of branches and widening the range of their services, banks have been serving a very large section of clientele and mobilised deposits amounting to over Rs. 50,000 crores.

Distince slackness, particularly in the first half of 1982 in the rate of growth of deposits was a notable feature of banking trends during 1982. Aggregate deposits of all scheduled commercial banks increased during 1982 by Rs. 7239 crores (i.e. by 16.4 per cent) to Rs. 50,671 crores as against a rise of Rs. 7223 crores (i.e. 19.6 per cent) in the previous year. Accretion to demand deposits at Rs. 875 crores was barely a little over one-half of the accretion in 1981 (Rs. 1518 crores). Quantum-wise, deposit accretion at Rs. 5732 crores was about the same as in 1981 when it was Rs. 5705 crores. Quarterly trends in deposit accretion during 1982 show slackness in growth rate upto June 1982, with an unusual negative growth of Rs. 303 crores in the 1st quarter ended March 1982, as against a sizeable increase of Rs. 1088 crores in the corresponding quarter of 1981. In fact, deceleration in deposit growth started in the third quarter of 1981 itself. The Report on Trend and progress of Banking in India, 1981-82 issued by the Reserve Bank of India, is at pains to explain the slackness in deposit growth. It cites the following reasons for the fall in the rate of growth of bank deposits :

(a) a sharp deceleration in the rate of growth of reserve money (9.6 per cent as against 19.3 per cent in 1980-81) resulting mainly from the sizable fall of Rs. 1955 crores in net foreign exchange assets of the Reserve Bank of India, as against a fall of only Rs. 720 crores in 1980-81, and this meant depletion of the liquidity base,

(b) the slowing down of the pace of disbursements by Central and State Governments—the disbursement increased by only 12.0 per cent in 1981-82 as against a rise of 23.9 per cent in 1980-81, thus affecting the overall liquidity,

(c) a marked widening of the range of saving media with the introduction of the new 12 per cent six-year National Savings Certificates and the sharp increases in the issue, by the private corporate sector of shares and debentures, particularly convertible debentures. In this category the issue of Special Bearer Bonds is also to be considered which netted Rs. 876 crores during 1981-82. It is possible that some of the subscriptions were made by the withdrawal of deposits, and

(d) the restrictive measures adopted by banks in the later part of 1981-82 would probably have affected the return flow of funds into the banking system.

The deposits debacle of banks during 1981-82 shows that the funds raised by the alternative media have been at the cost of bank deposits. In other words, the savings have been substitutive and not additive. Within the corporate sector, a few companies are able to corner funds in the market and inter-corporate lending increases. It has been the policy to encourage the corporate sector to raise funds directly from the public by allowing it to pay a substantially higher rate of interest than banks. Needless to say, apart from raising the issue of safety of public funds, this policy reduces the effectiveness of the monetary policy and the cry of financial discipline for the borrower goes unheeded.

Deposits are expected to grow at a higher rate in the current year if the measures initiated by the Government to accelerate the growth of the economy start yielding results. There are, however, a number of dark spots which are giving room for anxiety on the deposit front. Lower income generation owing to depressed conditions in the agricultural sector due to bad monsoon and, in the industry, on account of continued imbalances in the supply-demand position, growing unemployment and relatively lower yield on bank deposits compared to several other instruments of investment are likely to slow down the growth rate of deposits of the banking system.

Credit Deployment

Banks being important media of economic development, deployment of credit has to match the needs of borrowers and simultaneously fall in line with priorities as per the credit policy. There has been a sea-change in the portfolio of advances of commercial banks since their nationalisation. The vast financial resources of banks have been harnessed to fulfil the larger socio-economic objectives by extending banking services to rural and semi-urban, unbanked centres and deployment of more credit to priority sectors such as agriculture and small scale industries, particularly, the weaker sections of society.

The year ended June 1983 witnessed a significant increase in lending support extended by commercial banks to priority sectors. The loans and advances to these sectors accounted for Rs. 11,867 crores at the end of December 1982 as against Rs. 10,447 crores during the previous year. Out of the total of Rs. 11,867 crores, agriculture accounted for Rs. 5,144 crores, small scale industries Rs. 4301 crores and other priority sectors such as transport operators, professional/self-employed persons and retail trade/small business, accounted for Rs. 2422 crores.

Based on the recommendations of the Working Group, the Reserve Bank has advised the commercial banks to involve themselves more effectively in the successful implementation of the 20 Point Programme with a greater thrust in improving the standard of living of the rural people and the weaker sections of society. Within the overall target of 40 per cent bank credit set for priority sector advances to be achieved by March 85, the sub-targets for lending to agriculture and weaker sections have been revised. At least 15 per cent of total credit is required to be extended by way of direct finance to agriculture by March 1985 and 16 per cent by March 1987. Advances to weaker sections have to reach the level of 10 per cent of total bank credit by the end of March 1985. The Public sector Banks have been asked to take all possible measures to increase lending to beneficiaries of the Integrated Rural Development Programme. The Programme is intended to provide families below the poverty line, assistance in the form of subsidies and loans to take up productive activities that would generate sufficient income to enable them to cross the poverty line. Of the total investment of Rs. 4500 crores on the IRD Programme, envisaged in the Sixth Plan, Rs. 3000 crores are to be made available by banks by way of credit support, the balance of Rs. 1,500 crores being met in the form of subsidy by the Government.

Working of Different Schemes

(*a*) *Export Credit :* As against a fall of Rs. 6 crores during 1981-82, the outstanding export credit rose by Rs. 22 crores in 1982-83. The outstanding amount as at the end of June 1983 totalled Rs. 1,744 crores. In line with the revision in the general interest rates structure which came into effect on 1st April 1983, the interest rates on export credit now stands reduced. The reduction amounted to 0.50 percentage point in respect of different categories of pre-shipment and post-shipment credits. The ceiling rate on export credit beyond the stipulated periods was reduced from 17.5 per cent to 16.5 per cent while the rate of interest on deferred credit for periods exceeding one year, remained unchanged at 8.68 per cent.

Export Credit (*Interest subsidy*) *Scheme* 1968 : As in the previous year, the Reserve Bank continued to disburse interest subsidy at 1.5 per cent from the Marketing Development Assistance of the Government of India to commercial banks and eligible co-operative banks on export credit extended by them to exporters for specific goods. Besides, the Reserve Bank paid special subsidy on behalf of the Ministry of External Affairs, Government of India, to EXIM Bank and certain commercial banks in respect of certain special lines of credit extended to Bangladesh for its imports from India. The amount of subsidy paid during 1982-83 was Rs. 20.72 crores comprising of a special subsidy of Rs. 72 lakhs and a general subsidy of Rs. 20 crores.

Duty Drawback Credit Scheme 1976 : This scheme is intended to benefit exporters who can avail of interest-free finance from banks upto 90 days against shipping bills provisionally certified by the customs authorities towards refund of duty. The financing banks, in turn, are eligible to avail of interest-free re-finance from the Reserve Bank pending final settlement of duty drawback claims of the exporters. During the period November 1982 to April 1983 limits aggregating Rs. 17.01 crores were sanctioned to 28 banks. As on April 30, 1983, refinance to the extent of Rs. 10.21 crores had been availed of by these banks and the amount outstanding was Rs. 3.64 crores.

(*b*) *Credit Authorisation Scheme :* As at the end of June 1983, the parties covered under this scheme numbered 897 as against 1,251 in the previous year. The upward revision in the cut-off point for credit authorisation accounted for this sharp drop in coverage. The 897 parties covered under the credit authorisation scheme included 188 public sector undertakings. Total limits in force relating to parties covered under the scheme amounted to Rs. 17,051 crores at the end of June 1983. The share of public undertakings was 60.9 per cent. Working capital (including packing credit and bills) continued to claim a predominant share of 93.0 per cent, term finance and sale of machinery on deferred payment basis constituted 5.6 per cent and 1.4 per cent respectively, of the total limits in force.

Application received for the Reserve Bank's authorisation numbered 898 during 1982-83 as against 1305 in 1981-82, the respective figures for public sector units were 210 and 219. The reduction is partly due to the revision in the cut-off point for credit authorisation. Applications approved numbered 529 during 1982-83 (873 in 1981-82) including 124 from public sector units. Of the Rs. 3843 crores for which authorisations were granted, public sector units accounted for Rs. 3130 crores or 81.4 per cent.

(*c*) *Differential Rate of Interest Scheme :* The Public sector banks made further progress in respect of their lending under this scheme. During the year ended December 1981, the number of loan accounts under the scheme rose by Rs. 4.15 lakhs to Rs. 29.25 lakhs and loans outstanding by Rs. 64 crores to Rs. 258 crores. The average amount of loan under the scheme also increased from Rs. 771 to Rs. 880. There was further improvement in the coverage of borrowers of scheduled castes and scheduled tribes. The number of such borrowal accounts which stood at Rs. 11.18 lakhs at the end of December 1980 went up to Rs. 13.76 lakhs by the end of December 1981 and the amount of loans outstanding from Rs. 88 crores to Rs. 123 crores constituting 47.9 per cent of total advances under the scheme as against 45.4 per cent in December 1980 and the target ratio of 40 per cent. By the end of December 1981, the public sector banks had attained a ratio of 1 : 17 per cent in respect of their DRI advances as against the stipulated target of one per cent. At the end of December 1981, outstanding advance of private sector banks under the DRI scheme aggregated Rs. 2.75 crores spread over 26,000 borrowal accounts, of which an amount of Rs. 73 lakhs covering 8000 borrowal accounts was availed of by members of SC/ST and constituted 26.5 per cent of total DRI advances as against the stipulated target of 40 per cent.

(*d*) *Integrated Rural Development Programme :* The banks continued their efforts in increasing the flow of assistance under the Integrated Rural Development Programme. The main objective of the programme launched in 1978-79 is to take above the poverty line, the families in the identified target groups and create substantial additional opportunities for employment in rural areas. It enables the poorest of poor to acquire productive assets with the help of government subsidy and institutional finance. Total subsidy per year i estimated at about Rs. 300 crores, while the expected credit support from banks is about Rs. 600 crores. The number of families assisted under the programme increased from 27.13 lakhs in 1981-82 to 34.55 lakhs in 1982-83 and term loans disbursed by banks from Rs. 468 crores to Rs 714 crores. There was also an impressive increase in the number of scheduled castes/tribes assisted from 10 lakhs to 14 lakhs in 1982-83.

Sick Industrial Undertakings : The growing involvement of Banks in the development of priority sectors have put considerable financial strain on commercial banks. The burden of nursing sick units back to health is causing serious concern to bankers. The number of sick industrial units enjoying credit facilities of Rs. 1 crore and above has also gone up in different sectors of industry. The following table illustrates the number of sick units and the outstanding bank credits to large sick units in various industries.

TABLE 4

Industry	Sick units	Outstanding bank credits at the end of June '82 (Rs. in crores)
Engineering and Electricals	91	345.23
Textiles ..	111	515.55
Iron & Steel ..	39	138.33
Chemicals ..	25	194.13
Jute ..	37	111.35
Sugar ..	45	149.34
Rubber ..	15	100.41
Cement ..	3	12.08
Miscellaneous ..	69	162.53
Total	435	1728.95

An analysis recently worked out by the Industry Ministry showed that 60 units registered under the MRTP Act 1969 with outstanding bank credit of Rs. 593 crores, were sick at the end of June 1982. The number of sick industrial units rose to 28,428 by the end of June '82 from 22,366 at the end of December 1979. In other words 6062 more units had become industrially sick in two and a half years. The percentage increase works out to 27, which is on the high side. The outstanding arrears owed by these sick units stood at Rs. 2299 crores at the end of June 1982, as against Rs. 1623 crores in December 1979 thus resulting in an increase of 42 per cent. According to the Reserve Bank of India, 1982 sick units with outstanding bank dues of Rs. 132 crores were put under nursing programme by the financing banks at the end of June 1982.

Banks and financial institutions prepare rehabilitation schemes involving concessions where the unit is considered potentially viable. The Government also provides concessions, if required, in such rehabilitation schemes. Recent schemes aimed at such rehabilitation relate to (i) grant of tax benefit on merger of non-viable companies with healthy ones ; (ii) margin money scheme for sick small-scale industrial units ; and (iii) liberalised non-levy quota for sick cement units.

National Bank for Agriculture and Rural Development (NABARD)

This institution was established on 12th July 1982 to assume the responsibilities of the Agricultural Credit Department of the Reserve Bank of India and the Agricultural Refinance and Development Corporation. The assets and liabilities with the Reserve Bank relating to the National Agricultural Credit (Long-term operations) Fund and the National Agricultural Credit (Stabilisation) Fund were transferred to NABARD. It (NABARD) also took over from the Rural Planning and Credit Cell and Department of Banking Operations and Development of the Reserve Bank, the refinance and developmental functions relating to Regional Rural Banks besides the inspection of these banks. Thus, in the sphere of rural credit NABARD has emerged as an apex national institution which would provide by way of refinance, loans and advances to State Co-operative Banks, Land Development Banks, Regional Rural Banks and other approved financial institutions for financing production, marketing and investment activities relating to agriculture, rural development, small-scale industries, industries in tiny and decentralised sector, cottage and village industries, handicrafts and other rural crafts.

NABARD's share capital of Rs. 100 crores was contributed equally by the Central Government and the Reserve Bank. The other resources comprise of borrowings from the Reserve Bank, borrowings from the Central Government by way of re-imbursements under the various projects supported by external aid, market borrowings and its National Rural Credit (Long-term Operations and Stabilisation) Funds.

NABARD has been associated with implementation of 45 projects involving external aid. Of these, 42 projects are financed with International Development Association/World Bank assistance inclusive of four general lines of credit for a total of US $ 875 million (some of which are co-financed by donor countries/agencies such as the U.K., the U.S.A., Netherlands, Switzerland, West Germany, Canada, EEC etc.), two projects are financed with assistance from International Fund for Agricultural Development (IFAD) and one with aid from Kreditanstaff Fur Wiederaufbau of the Federal Republic of Germany. Total credit routed through NABARD for projects sanctioned by the World Bank Group and donor countries/agencies aggregated to US $ 2099 million. Specific mention may be made in this Context of the fourth ARDC's (Agricultural Refinance and Development Corporation) Credit Project envisaging financial assistance of US $ 350 million approved by the World Bank in February 1982. Under this project total disbursements by NABARD (including expenditure of Rs. 10 crores on training programme) aggregated to Rs. 4 crores till the end of March 1983.

After the formation of NABARD, credits fro five donor countries viz. the U.K., the U.S.A. Netherlands, Switzerland and West German were negotiated for a total amount of Rs. 13 crores. A salient feature of one of the bilatera credit agreements (viz. with Switzerland) is that it supports financing of rural development operations of small farmers and industries in tiny and decentralised sector through NABARD. The first NABARD project to be submitted to the World Bank, envisaging credit of US $ 400 million was also prepared.

On the date of the establishment of NABARD, loans and advances issued by the Reserve Bank and outstanding against State Co-operative Banks (SCB's) and Regional Rural Banks (RRBs) aggregating to Rs. 759 crores were transferred to NABARD. To enable NABARD to provide short term loans to SCB's and RRB's, the Reserve Bank has sanctioned to NABARD a general line of credit of Rs. 1200 crores inclusive of the aforesaid transfer of loans outstanding against these banks. Upto June 1983, NABARD sanctioned to SCB's and RRB's aggregate credit limits of Rs. 1574 crores and Rs. 222 crores respectively for financing agricultural operations, marketing of crops, etc.

Merchant Banking

The main areas of activity of a merchant banker relate to corporate financial counselling, project finance, management of Security issues, management of public deposit schemes and mobilisation of non-resident investments. Merchant Banking has grown in the developed countries over the past few decades. Even in developing countries like India, this concept is fast catching on. Merchant banking in the U.K. is a valuable institution operating in all facets of normal banking and in addition, offering highly specialised financial, advisory and intermediary services to its customers. In India, several foreign banks as also a few nationalised banks have set up separate merchant banking divisions. A few firms of share and finance brokers having adequate experience and in-depth knowledge of banking, capital market and project financing have also set up separate private limited or public companies to undertake the work of a merchant bank in India. These firms provide diverse types of services to their clients both corporate and individual. In the U.K. the evolution of merchant banks is linked to the provision of short term finance for the corporate sector. However, in India, merchant bankers are engaged principally in arranging the long term capital needs of the Corporate Sector. Merchant Bankers have thus grown with the capital market in this country.

The Capital market in India which became active after scores of companies decided to dilute their foreign equity to adhere to the FERA regulations, has helped many merchant bankers to solicit investments from a large number of investors who have entered the capital market for the first time. Besides, helping the Corporate Sector to raise long-term finances, the merchant bankers have also been helping it to raise short-term finances. Inter-Corporate deposits for periods upto one year have become quite popular in recent years. Merchant Bankers act effectively as intermediaries between those who have funds for deploying and those who need them for temporary periods.

Merchant bankers also help entrepreneurs to set up projects. Some of them offer services for complete project financing. In view of their assistance, people with even little capital have been able to set up projects by promoting companies. Instances are not few of people starting in a very small way with the help of merchant bankers and becoming big in years to come. Leasing as a means of asset utilisation, is gaining rapid acceptance and merchant bankers are playing a major role in arranging for lease financing.

After the several liberalisation schemes announced bythe Government for non-residents for investment in India in general and in shares and debentures in particular, several merchant bankers have helped some reputed companies to tap this source for raising finance. Some merchant bankers have been successful in developing contacts with non-resident Indians in select countries. With their efforts, issues of several companies reserved for non-resident Indians and persons of Indian origin settled abroad have evoked encouraging response.

Merchant bankers play an increasing role in foreign currency financing. Interdependence of various economies of the world has increased in the last few years. Competition between various countries to enter Indian industury has grown in the recent past. Capital markets have become more complicated abroad and merchant banks provide specialised services to the corporate sector in India while borrowing from abroad. Some merchant banks have associated themselves with prominent banks and merchant banks operating abroad.

Merchant bankers have also begun to play a crucial role in promoting Indian exports and joint ventures abroad by finding markets and arranging for financial assistance from specialised agencies which have been set up by the Government for the purpose. Merchant bankers are engaged in the business of arranging changeover of management of companies. Since in this business secrecy is an important aspect, private merchant bankers can play a useful role. Merchant bankers assist their clients to achieve vertical expansion of their business or expansion of their business by taking over some sick units. They (Merchant Bankers) can also help their clients to raise additional capital, if needed. Hence, it can be said that merchant banks have come of age in India and they are in a position to share their knowhow with other developing countries.

Banks and Leasing Companies

Leasing as an alternative source of financing has suddenly caught up in our country as witnessed by the entry of more than 100 leasing companies in the last two years. The potential business is estimated at Rs. 50 crores a year by the end of 1984. Of late, commercial banks are being increasingly approached by leasing companies to supplement their financial resources so as to enlarge the scope of their activity. This new development has undoubtedly created a paramount need for commercial banks to equip themselves with special skills to face the new financial challenge.

As in a hire-purchase scheme, payments for the equipment under a lease contract are made in instalments while the equipment is being put to productive use thus reducing the immediate financial burden on the user. There are several variations of a lease contract. In its simplest form the customer identifies the equipment required by him, the leasing company (lessor) purchases the equipment from a manufacturer/supplier and contracts to lease the equipment to the lessee (the user of the equipment) for a certain number of years for which the lessee is required to make specified rental payments to the lessor over the period of the contract. In a true lease, the lessee can claim rental payments as tax deductions.

A long term lease arrangement is referred to as a financial lease whereby the user can acquire use of an asset for most of the equipment's useful or economic life and payments over the lease period are sufficient to enable the lessor to recover the cost of the equipment including interest on the investment

The horizon for leasing in India is quite vast. Prudent management principles call for a policy by the top management of banks, laying down individual bank's general approach to these new borrower-leasing companies. To become better disposed towards this new category of customer base, an awareness of leasing as a financial service and an understanding of its essential pre-requisite for formulating the bank's corporate policy is to be created. Such a corporate policy is essential from the standpoint of adapting the banking organisations to enviroumental changes and pressures given rise to by the new financial product leasing.

Banking Policy

There are several gaps in the present banking policy which must be bridged immediately in order to infuse new spirit and dynamism among banks and make them an effective instrument of the desired socio-economic change. In order to remove the uncertainty and ambivalence in the minds of bank managements and the clientele, the banking policy statement should cover the following important areas : (*a*) role of banks and other financial institutions in the nation's development ; (*b*) re-organisation of banks ; (*c*) deployment of credit, sector-wise and region-wise ; (*d*) interest-rate structure ; (*e*) training, promotion, recruitment and research ; (*f*) branch expansion ; (*g*) profitability and profit planning ; (*h*) customer service ; and (*i*) computerisation.

A dynamic banking policy for the country should be based on a long-range growth of the banking and of the national economy as well. The effectiveness of such a policy will depend on how it seeks to address itself to the resolution of a number of crucial problems, currently facing the banking industry on numerous fronts, which are likely to be aggravated with a fresh bout of growth over the current decade. While the policy approach should be guided by time-honoured commercial principles, economic considerations and norms of managerial science, it should probe into critical aspects of banks' functioning and for that reason ought to be a multi-dimensional one. A new policy should not only prepare banks for a fresh bout of growth but also seek to infuse dynamism and innovativeness in their functioning—the two key elements which are sadly missing today.

At the outset, the new policy statement should spell out in unambiguous terms the role that the government would desire various types of banks to play in the country's social and economic progress. In the 1970's, banks were assigned a key role in rural development keeping in view the proverbial inefficiency and failure of co-operative banks to deliver the goods. Commercial banks have thus emerged as an integral part of the institutional credit structure for agricultural and rural financing. The new policy can ill-afford to envisage soft-pedalling of commercial bank's branch expansion in the countryside or for that matter of their key role in socio-economic transformation in rural areas. However, in order to relieve the present strain on Banks' Management Systems and organisational effectiveness and profitability, the multi-agency concept should be revived in practice.

Apart from commercial banks, there are now other institutions like NABARD, Co-operative banks and regional rural banks which can supplement the efforts of commercial banks in bringing about socio-economic change in the countryside. The Government has already drawn up special development programmes for rural areas like IRDP, new 20-point programme, etc. It would, therefore, be in the fitness of things if the new policy throws light on the collaborative role of all these agencies, in the socio-economic uplift of rural areas. All these agencies could play a vital role in meeting the needs of rural areas in regard to branch expansion or credit requirements. Taking an overall view of the manner in which branch expansion of commercial banks, particularly, in rural areas has taken place so far, the planned approach to this vital task is called for in the opinion of banking circles which will ultimately lead to a well-co-ordinated national programme of branch expansion in the coming years.

So far as the branch expansion is concerned it should also be examined whether population or banking needs should be the appropriate criterion for determining the future requirements of branch expansion of rural areas. If banking need is felt to be the most rational criterion, it would be necessary to indicate the suitable norms for assessing it. The new policy should normally indicate how major responsibilities for extending banking facilities in rural areas should be shared among various banking institutions, how inter-regional disparities in branch expansion should be narrowed down and how conglomeration of branches in particular areas should be minimised. In order to enable banks to absorb the strains on their profitability implied in their massive expansion in rural areas, the new branch expansion policy should stipulate a ratio, however stringent for opening of branches in metropolitan cities and towns on the one hand, and rural and semi-urban areas on the other. The advantage of such a stipulation would be that banks can plan their branch expansion in a systematic way for both type of areas.

In view of the growing erosion of bank's profitability, doubts are being expressed whether the banking system would be in a position to pursue social banking vigorously in the remaining part of the decade. The new banking policy should, therefore, boldly state that banks will do social banking without losing their commercial character. For, commercial character alone can help banks to do social banking in the desired measure. With steady erosion of bank's profitability, their intrinsic strength in terms of a strong capital base has been weakened. Thus, the ratio of capital and reserves to aggregate deposits has gone down to barely 2 per cent, as against a normal 6 per cent which was considered to be safe by the Reserve Bank some years ago. The poor capital base of Indian commercial banks weakens their standing in the highly competitive international markets and adversely affects their ability to raise resources on attractive terms for funding international business operations.

Once profitability is officially declared as an acceptable principle of new banking policy, each bank management will strive to work for it. This will help banks to strengthen their feeble capital base by transferring a large amount of profits to reserves every year. Once profitability is declared as an object of new banking policy, bank managements can aim at introducing cost control measures in a more serious manner than they are presently inclined to do, pursue competitive efficiency and apply their minds to the task of doing business in an innovative way rather than in a routine-minded fashion as they seem to do at present.

Work technology is an important area where a precise policy will have to be spelt out by the government in order to ensure efficient service to the bank's expanding clientele in various geographical areas. Until there is a proper policy at the industry level, which ensures a proper climate for healthy industrial relations on one hand and work technology on the other, improvement in customer service will remain a myth. Banks will require computers for a variety of purposes to settle speedily inter-branch transactions, to ensure swift transfer of funds and for strengthening MIS, all of which can together contribute to the organisational efficiency of banks. To be precise, today's banking cannot be done by yesterday's methods and tomorrow's by todays. At the same time, it must be stressed here that both in the field of computer and electronic technology, the new and advanced technology is making yesterday's technology look like a dwarf. In view of the high rate of technological and the high incidence of obsolescence, the Government should announce a long term and forward-looking policy for computerisation for the industry as a whole so that individual banks can chalk out their plan for action. The policy for computerisation should focus on the following aspects : (i) the areas or banking operations where computers should be introduced, (ii) the type of computers which could suit various areas ; and (iii) envisaging of a collaborative or consortium approach in order to share the high cost of computerisation.

Improvement in operational and customer service is a function not only of computerisation and mechanisation but also of human efficiency. The decline in operational efficiency and in standards of customer service and in productivity are due to the fact that the morale of the staff including even key management personnel is in a low key. The new banking policy for human resource management should, therefore, be clearly spelt out to involve the best talents which are available within the industry and to seek the participation of the staff in management. Productivity cannot be imporved as long as employees feel they are a mere cog in the huge administrative machinery. Industrial democracy in banking should also be supplemented by restoration of the system of reward for better and efficient work.

Banks resort to window-dressing heavily in order to maintain or strengthen their respective ranks while this practice promotes no social good, it is wasteful to the extent that bank managements spend more time on dressing up their deposit figures than doing the kind of activities in an innovative spirit which can contribute to their own intrinsic strength in terms of organisational efficiency or help them to promote social and economic welfare. Since a warning that window-dressing should be avoided has failed to check this tendency, two vital aspects will have to be incorporated in the new banking policy ; first for the purpose of determining the rank, the average monthly balances in deposit accounts for a given year should be taken into account. Second, a bank's rank should be decided not merely in terms of the size but in terms of many other performance criteria, including profitability which may not be difficult to work out.

Since the working funds of banks consist largley of deposit resources, banks can shoulder their onerous socio-economic rsponsibilities only in the measure in which they succeed in attracting public savings to their fold. No doubt, the rate of deposits to national income has, over the years, reached an impressive peak of 30 per cent by 1982. However, the annual growth rate for bank deposits have slowed down in recent years. The interest rate structure should be so rationalised that bank depositors get a better deal than at present. It would be appropriate to make bank deposits more competitive with other savings instruments launched by institutions such as post offices, not burdened with social responsibility. The slow-down in deposit growth in recent years, is symptomatic of the enfeeblement of bank's competitive capacity vis-a-vis other instruments of savings. Viewed in this perspective, the new banking policy should ensure that banks pursue social banking consistent with profitability and play a key role in savings mobilisation which in turn can help them to act as pace-setters of development and social change.

The increased inflow of foreign inward remittances has lent a strong support to our balance of payments in recent years. With the 1982-83 budget, the Government gave substantial incentives in the form of tax concessions and higher interest rates to NRI savers and investors. The incentives were further strengthened in the last Union budget. Since balance of payments outlook for the next three to five years rests on an uncertain basis, the new banking policy should unequivocally announce the Governments' approach towards NRI savings and investments so that banks could serve as a conduit for mobilising such funds, badly needed to buoy up country's sagging balance of payments.

The need for re-organisation of the banking system has been felt since nationalisation of banks. Considering the fact that the vast rural-oriented expansion of banks poses problem of central managerial control in view of the widening of geographical and functional span, the expansion of banks into the country's vast interior areas should be entrusted to Regional Rural Banks hereafter. Modalities could also be worked out so that commercial banks play their part in rural development through their proxies in the form of RRB's. The Banking system should be so restructured that the regional imbalances in credit allocation reflected in the differentials in credit deposit ratios for developed and underdeveloped regions in various states are sought to be minimised.

The present structure is defective in the sense that it results in multiplicity of efforts in financing certain sectors and in inadequate attention to some other equally important sectors/goals. For instance, commercial banks, co-operative banks and regional rural banks currently finance the agricultural sector, while the non-farm sector of the rural economy and the urban poor are not being served by any of them. The bank's indiscriminate expansion into the country's interior, involves strain on management with resultant dilution of their organisational efficiency. All these points ought to be borne in mind while streamlining the organisational structure of banks. There is indeed a necessity for appointing a high power commission to go into various aspects of the tricky problems involved in structural organisation of banks.

The new banking policy should make domestic banking more profitable. International operations cannot be expected to provide a cushion for all banks against profit-erosion stemming from domestic social banking. In fact, a viable domestic banking can encourage bank's forays in highly venturesome and competitive international banking. In view of Indian Bank's thin spread abroad and their concentration on retail rather than wholesale banking, the new banking policy should encourage a consortium approach to enable banks to achieve a breakthrough in their overseas expansion and in tapping profitable opportunities in risky and venturesome international banking and foreign exchange operations.

It is certainly evident from the foregoing discussion that banking policy formulation has myriad aspects and its articulation in unmistakable terms would give banks the dynamic stimulus which has all along been sadly missing. It is high time banks were given a new policy deal. Since policy formulations encompasses numerous aspects, it should be done by the Government on the basis of participation and consultation with the National Institute of Bank Management (NIBM), Indian Banks Association (IBA), economists, bankers and financial analysts.

ALLAHABAD BANK

NATIONALISED in 1969. **Directors:** A. Ghosh (*Chairman and Managing Director*), Bhupesh Sarkar, J. G. Rai, D. N. Patodia, Col. P. L. Negir, P. V. S. M. (Retd.) Rahim Gutti, Samir Ghosh, Dr. K. R. Gupta (Retd.), Jaswant Singh, V. M. Sunder Raj and D. R. Mehta. **General Manager :** P. K. Sen Gupta. **Head Office :** 2, Netaji Subhas Road, Calcutta-700 001. Telegrams : 'HEADALLA'. Telephones : 22-9258 (6 lines). **Auditors :** Messrs. S. K. Bhattacharya & Co., Messrs. Singhi & Co., and Messrs. K. Prasad & Co.

CAPITAL : Authorised, Issued and Subscribed : Rs. 1,05,00,000 (wholly owned by the Central Government).

CAPITAL : Paid-up: Rs. 14,00,00,000 (wholly owned by the Central Government including 7,50,00,000 capitalised by transfer from Reserve Fund).

Date of Accounts : 31st December.

Objects and Activities: The bank is a Government of India undertaking and carries on all types of banking business including financing of foreign exchange dealings. In collaboration with two other nationalised banks in India, the bank has established a joint venture Deposit Taking Company called IBU International Finance Limited at Hong Kong. It has set up an off-shore unit in Bahrain and a representative office in Sydney. Thus the bank has established its presence in all the continents of the world with a network of 59 operating overseas branches and 1762 branches in India. The Bank has a Merchant Banking Division at Central Office and a cell at

New Delhi. Besides being the banker to the Ministry of Health and Family Welfare the bank is also associated with the payments of pensions and family pensions to the retired Central Government employees of civil/defence/railway departments as well as allowances to freedom fighters in the States of Gujarat, Uttar Pradesh, West Bengal, Meghalaya and Union territory of Goa, Daman and Diu. It also accepts payments of sales tax on account of the Maharashtra and Gujarat State Governments. The Bank also undertakes various other Government works.

For financing the priority sector and the weaker sections of the society, the bank has evolved two special categories of branches, in the form of Multi Service Agency (MSA) and Gram Vikas Kendra (GVK). There are now 406 MSA Centres and 254 GVK's functioning in the country. Besides financing they are also engaged in promotional activities providing counselling and advisory services, arranging agricultural exhibitions, cattle fairs, demonstration programmes on use of modern agricultural practices etc. Under the Lead Bank Scheme, the Bank was allotted 31 districts in the States of U.P., Rajasthan, Gujarat and Madhya Pradesh where district development has been initiated in co-operation with other concerned financial and non-financial agencies. The bank has sponsored 14 Regional Rural Banks in its lead districts for the benefit of the local population, especially the weaker sections of the community.

Date of Accounts : 31st December. **Transfer Fee :** Re. 1 per deed. **Sub-division** or **New Certificate Fee :** Re. 1.

Note : The Voluntary winding up of the Company (Bank) as proposed was ultimately rejected by a vast majority of shareholders. An application by a member was made earlier in the Calcutta High Court for winding up of the Company under court's direction ; but it was also dismissed as withdrawn. Thereafter the Company (Bank) embarked on commencing certain business and proceeded to complete the formalities for change of the name of the company and conversion of the Bank into a non-banking company as approved in the Extra Ordinary General Meeting held on 4th November 1978. But due to a subsequent injunction order of the Calcutta High Court in a winding up application since filed by four other members of the company, the conversion work could not be proceeded with and the matter is still subjudice.

INDIAN BANK

NATIONALISED in 1969. **Directors :** M. G. K. Nair (*Chairman & Managing Director*), M. Vallinayagam (*Executive Director*), S. Subramanian, T. M. Kaliyannan, A. Ponnudurai, Satya Narain Natha, R. Gupta & Co. and N. C. Banerjee & Co.

Objects and Activities : General banking including foreign exchange, advances to priority sectors i.e. agriculture, small-scale industries and financing of preferred sectors : *viz.*, small businessmen self-employed persons and retail traders, besides encouraging exports through liberal export credit assistance. The three Regional Rural Banks sponsored by the bank made further headway in mobilisation of rural savings and in extension of credit to weaker sections. The Puri Gramya Bank with 82 branches had mobilised deposits to the tune of Rs. 6.40 crores and had advanced Rs. 13.76 crores. The Pandyan Gramya Bank had 114 branches and its deposits were Rs. 11.32 crores and advances Rs. 20.86 crores. Dhonkanal Gramya Bank—the youngest of the three rural banks—had 29 branches with deposits aggregating Rs. 1.49 crores and advances Rs. 1.96 crores. Under the Lead Bank Scheme the bank was allotted 7 districts. During the year 1983, 16 new branches were opened in these districts by the bank. Out of the 157 non-lead districts, where the bank operates, it participated in the credit plans formulated by other lead banks in 150 districts spread over 19 states and 2 Union Territories. The bank launched a special scheme during the year under the title 'Sevanjali Yojana Scheme', for the upliftment of Scheduled Castes and Scheduled Tribes within a short span of 3 months of the implementation of the scheme, the bank sanctioned loans aggregating to Rs. 2 crores.

YOU DON'T KNOW IT, BUT THERE'S AN ORCHESTRA PLAYING FOR YOU.

The Grindlays' symphony of banking services is beautifully orchestrated by a team of professionals to give you perfect pitch and tone!

Simply choose your tune:

—Personal services for pensioners, housewives and executives (tax advice, overdraft facilities, payment of bills).

—Courteous corporate services (like expert and experienced advice on financial matters, loans, etc.) which make business a pleasure.

—Innovative merchant banking services (leasing, public issue management, project finance, advice on mergers).

—International financing for both public and private sector projects.

Whatever it is, your business will be conducted with a harmonious blend of efficiency, promptness and good sense.

Banking services in tune with your needs

INSURANCE

GENERAL INSURANCE CORPORATION (GIC)

THE General Insurance industry has undergone a virtual revolution, injecting a new vigour in all facets of its operations. It is no more confined only to cities. With the lowest premium peoples' policies it is treading the towns and tiny villages. With foreign operations and astute reinsurance policy it reaches the international market and with its commitment to assist science and technology it enters even the orbit of space to vouch cover to our spacecrafts. The achievements registered during the first decade infuse in it a renewed confidence to meet the challenges ahead.

Prior to nationalisation, the general insurance industry was by and large, a city culture, catering mainly to the needs of commerce, trade and industry. It hardly meant anything to the community at large. Consequent upon the state take over, 107 general insurance companies were amalgamated and grouped into four companies.

1. National Insurance Co. Ltd.
2. The New India Assurance Co. Ltd.
3. The Oriental Fire & General Insurance Co. Ltd.
4. United India Insurance Co. Ltd.

The General Insurance Corporation was incorporated on 22nd November 1972 as the holding company and the above four companies were dovetailed as subsidiaries of the G.I.C. with effect from 1st January 1973. The social objective of nationalisation was to ensure that the operation of the economic system did not result in concentration of wealth to the common deteriment, to make it meaningful to the common man, and to help the growth of economy by giving general insurance its rightful place in the mainstream of the national economy.

The involvement of general insurance industry in socio-economic cause is vividly manifested in its investment policy. It is playing a significant role as one of the leading financial institutions. Its investible funds are channelised into various welfare-oriented sectors as per the guidelines of the Government. Assistance on soft basis to Central and State housing agencies—particularly for village housing projects, softloans to state for fire-fighting equipment and substantial support to public borrowing programmes are some of the features of the industry's investment policy. One of the most outstanding features of the industry's achievement was the introduction of new insurance covers specially designed for urban dwellers and rural population. In a country dotted with nearly six lakh villages where 80 per cent of the populace lives, the rural insurance covers for crop, cattle, agricultural pumpset, poultry, sericulture, pisciculture etc., have helped in bringing insurance service to the doors of the people. The introduction of the Janata Personal Accident Insurance and the Gramin Accident Insurance added a new dimension of social responsibility and brought the industry with the reach of middle and lower income groups. When taken in group, these covers become further economic and serve as boons to the economically retarded sections. The strong urban bias under which the industry has been basking all along, whittled down as new avenues were paid to serve other sections of society. This ushered in a new era of progress and at a juncture, when the world insurance industry was facing strains of slump, the general insurance industry in India zoomed up to new heights.

The net profit of the General Insurance Corporation and its four subsidiaries together went up by 48.8 per cent from Rs.84.6 crores in 1982 to Rs. 125.8 crores in 1983. Consequently, the net return on owned funds also moved up substantially from 19.2 per cent to 23.6 per cent during the same period. An encouraging factor of the working results of these companies during 1983 has been a welcome diminution in the claims costs from 60.1 per cent in 1982 to 58.1 per cent of the premium income, in 1983. Normally, claims costs have risen directly with the increase in the volume of business. However, during 1983, this ratio has shown a decline.

The pre-tax profits of these companies went up substantially from Rs. 176.2 crores in 1982 to Rs. 255. 4 crores in 1983—a rise of 44.9 per cent. In line with the increase in profits, the tax provision was also higher at Rs. 129.5 crores in 1983 as against Rs. 91.6 crores in the previous year. Profits after tax improved by Rs. 41.2 crores to Rs. 125.8 crores in 1983. The dividend payment at Rs. 36.3 crores was also marked up substantially by Rs. 13.4 crores. Retained profits showed a sizeable rise from Rs. 61.7 crores to Rs. 89.5 crores—a rise of 45.1 per cent.

The total assets of the five companies went up from Rs 1729.5 crores in 1982 to Rs. 2128.7 crores in 1983—a rise of 23.1 per cent. The free reserves and surplus increased by Rs. 91.8 crores to Rs. 419.2 crores in 1983. Despite this increase, the net worth formed a lower proportion of total assets at 25.0 per cent in 1983 as against 25.4 per cent in the previous year. The other important items appearing on the liability side is the balance of accounts which went up from Rs. 442.1 crores to Rs. 536.8 crores in 1983.

Investments form a major part of the assets of the general insurance companies. The total investments went up sharply from Rs. 898.2 crores in 1982 to Rs. 1125.8 crores in 1983—an increase of 25.3 per cent. With the result the investment formed a higher proportion at 52.9 per cent in 1983 against 51.9 per cent in the previous year. Of the total investment of Rs. 1125.8 crores in 1983, investments in Indian Joint Stock Companies formed 38.3 per cent, Government Securities formed 34.4 per cent. The balance was contributed by special deposits with Government of India, investment in State, Semi and Foreign Government, securities holdings in subsidiaries and in Joint Stock Companies outside India. The receivables formed around 12.0 per cent of the total assets during both the years.

The newly introduced crop insurance scheme was in operation in 1983-84 in 11 states covering 60,372 farmers and 87,000 hectares of agricultural land against 9 states with 50,854 farmers and 70,000 hectares of agricultural land in 1982-83. The premium income of the G.I.C. including the share of State Government amounted to Rs. 21.2 lakhs in 1983-84 against Rs. 15.6 lakhs in the previous year. The crops covered under the scheme were wheat, paddy, jowar, bajra, groundnut, cotton, ragi, potato and oil seeds. The premium income of cattle insurance increased from Rs. 26.3 crores in 1982 to Rs. 33.7 crores in 1983. Steps are being taken to evolve a market segment amongst the subsidaries in regard to insurance of sheep and goat. A scheme prepared for insurance of layer chicken, subsidised by the IRDP has been approved for implementation.

Expansion of organisational structure with added emphasis on hitherto unexploited areas, opertaion of re-insurance, trading and saving or exchange and enhancement of employment opportunities in urban, semi-urban and rural areas are a few achievements of the industry that have contributed quite considerably to the national economy Selected financial data of the General Insurance Company and its subsidiaries are given below :

Table : 1

Financial Data of G.I.C. and its Subsidiaries

LIFE INSURANCE CORPORATION OF INDIA (L.I.C.)

The L.I.C. was established in 1956 by an Act of Parliament. It was formed by amalgamating the business of 245 insurance companies, both Indian and foreign. It has a paid-up capital of Rs. 5 crores provided entirely by the Central Government, pursuant to Section 5 of the Life Insurance Act 1956. One of the main objectives of nationalisation of the L.I.C. has been the canalisation of the Life Insurance Funds for the benefit and welfare of the nation keeping in mind sound business principles.

The marked feature of the Corporation is the Life Assurance Fund. This is built up by the premia received from policy-holders and interest received on investment of funds. A portion of the accumulated fund has, of course, to be kept aside to meet the claims of the policy-holders and to cover the management and business procuration expenses. The balance is invested to the best advantage of the policy-holders in particular and of the economy in general.

The L.I.C. has extended immense assistance to varied sectors whether it be expansion of power projects or development of sugar co-operatives or any other industrial or agricultural ventures. Thus it can be rightly said that there is hardly any field of economic activity which has not benefited by the L.I.C.'s operations.

The accumulation to the Life Insurance Fund has risen from Rs. 5116.32 crores in 1978-79 to Rs. 8631.72 crores by the end of March 1983. The total life insurance business in force as on 31st March 1983 was Rs. 35,374.31 crores under 244.42 lakh policies. The progress of new business under Individual Insurance is shown below in Table 2.

TABLE 2

New Business (Individual Insurance)

New Business in India	1978-79	1982-83
No. of policies ..	17,55,282	22,31,385
Sum Assured (Rs. in crores) ..	2057.40	3974.39

Sector-wise Distribution of Investments

The book value of the Corporation's Investments in India comprising investments in Stock Exchange Securities, loans (excluding loans on policies and loans on personal security) and capital of the Unit Trust of India was Rs. 7835.01 crores as on 31-3-1983. Table 4 below gives the sector-wise break-up of the investment.

TABLE 4

Sector-wise break-up of Investments in India

Sector		Book Value of Investment & Loans Outstanding as on 31-3-1983	% of total
		(Rs. in crores)	
1. Public Sector ..		6,189.66	79.0
2. Co-operative Sector ..		825.19	10.5
3. Private Sector			
(*a*) Joint Sector	32.75		
(*b*) Others	787.41		
		820.16	10.5
Total		7,835.01	100.0

The Corporation's investments in Stock Exchange Securities as on 31-3-83 was Rs. 4,641.28 crores. Of these Rs. 4,603.26 crores constituted investments in India and the balance Rs. 38.02 crores, outside India. Of the investments of Rs. 4603.26 crores in Stock Exchange Securities in India, the book value of the Corporation's investments in Government of India Securities and State Government Securities amounted to Rs. 2,450.05 crores and Rs. 436.04 crores respectively. The book-value of approved securities amounted to Rs. 1244.38 crores. These consisted principally of Municipal Securities, Debentures of State-level Land Development Banks and Bonds and Shares of Port Trusts, State Electricity Boards, State Financial Corporations and all-India Statutory Corporations. Investments in shares and debentures of companies and co-operative societies in India amounted to Rs. 396.62 crores and the subscription to Debentures issued by the Industrial Credit and Investment Corporation of India Ltd., amounted to Rs. 8 crores as on 31st March 1983.

Loans continued to constitute one of the major avenues of investment for the Corporation's Funds. In granting these loans, emphasis has been on financing of (*a*) generation and transmission of electricity for agricultural and industrial uses; (*b*) housing schemes; (*c*) piped-water supply schemes and sewerage schemes in urban areas and township; (*d*) piped-water supply schemes in rural areas; (*e*) development of road transport, and (*f*) industrial development.

Table 5 below gives a detailed break-up of the loans advanced to various authorities:

Total		495.59

In addition to the loan of Rs 161.78 crores to State Electricity Boards/ NEEPCO, the Corporation also invested in their Bonds aggregating to Rs. 40.50 crores.

The outstanding amount of loans as at 31st March 1983 was Rs. 3426.69 crores. In all 1316 urban local bodies having a total population of 6,14,05,624 in 20 states and in one (Chandigarh) Union Territory have benefited under the Corporations scheme of loans to Municipalities and other Urban Local Bodies for their water supply and sewerage schemes.

The Corporation helps small-scale and medium-scale industries by granting loans for setting up industrial estates. The Corporation also indirectly helps in financing of small and medium scale industries by subscribing to shares and bonds of State Level Development Agencies. Loans aggregating to Rs. 28.61 crores have so far been advanced to industrial estates. The total number of industrial sheds proposed to be constructed with the above loan assistance was 3648 out of which 3200 sheds were completed by 31st March 1983. The number of sheds actually allotted to industrial units upto 31st March 1983, was 2997 providing employment to 35,270 workers and having an annual turnover of about Rs. 138 crores.

During 1982-83, the Corporation sanctioned term loans to the tune of Rs. 156.02 crores (including short-term loans) and/or subscription to Debentures of 235 companies. It had also agreed to subscribe to share issues of one company.

The Corporation's total contribution to housing development in the country by way of loans upto

31st March 1983 amounted Rs. 1416.92 crores. The Own-Your-House Scheme (OYH) is in operation at 818 centres. Under this scheme, a total of 27,038 loans amounting to Rs. 91.43 crores have been sanctioned so far including 1215 loans amounting to Rs. 6.13 crores sanctioned during 1982-83. The details of the loans sanctioned during the year are given in Table 6 below:

TABLE 6

Details of Loans sanctioned under OYH Scheme

Loan amount	Number	Amount
		(Rs. in Lakhs)
Upto 10,000	5	0.60
10,001 to 25,000	214	45.75
25,001 to 50,000	586	236.74
50,001 to 75,000	226	146.73
75,001 to 1,00,000	130	114.55
1,00,001 to 1,50,000	54	68.78
Total	1215	612.55

Under the scheme for grant of loans to Public Limited Companies for the purpose of housing schemes of their employees, the Corporation has so far sanctioned 36 loans amounting to Rs. 5.43 crores to 36 public limited companies covering 3671 employees. Under the scheme for grant of loans to Co-operative Housing Societies of employees of Public Limited Companies for construction of houses, the Corporation has so far sanctioned loans amounting to Rs. 2.19 crores to 35 such Co-operative Housing Societies covering 1435 members. Under the schemes applicable to LIC employees, the Corporation has so far sanctioned loans amounting to Rs. 17.43 crores to 214 societies having 6890 members and loans amounting to Rs. 38.97 crores to 9761 individual employees. The Own-Your-Apartment scheme (OYA) is in operation at present in Bombay, Calcutta, Bangalore, Ahmedabad and Pune. The total loans sanctioned upto March 1983 to 355 individuals on this score amounts to Rs. 0,78 crores. The Corporation's scheme for grant of loans on mortgage of immovable property is in operation at 787 centres. The total number of loans sanctioned so far amounted to 9989 aggregating to Rs.67.07 crores.

The Corporation is a socially-oriented institution committed to provide essential social service of life insurance to all sections of the community. For this purpose, it has designed special schemes for the economically weaker sections. The Corporation has, as a permanent measure, decided to waive extra premium for insurance of disabled lives for certain types of disabilities upto a maximum sum assured of Rs. 10,000 in the aggregate. The Corporation has also made a provision for reservation of posts in Classes II and IV to the extent of one per cent each of its total posts at the time of recruitment, for the blind, the deaf and the orthopaedically-handicapped candidates. In respect of the physically-handicapped candidates, age relaxation is provided to the extent of 10 years. As in past years the LIC has been making investments in socially oriented schemes to fulfil its objective of utilising its resources to benefit the common man. Investments in socially oriented sector included (i) subscription to bonds of, and granting of loans to, Apex Housing Co-operative Societies, Housing and Urban Development Corporation Ltd., and also to State Governments as part of assistance for housing programmes, (ii) subscription to Debentures of Co-operative Land Development Banks and grant of Term Loans to Indian Farmers Fertilisers Co-operative Society Ltd., etc., to benefit the agricultural sector, (iii) subscription to the bonds of the S.F.C., I.F.C.I., I.C.I.C.I., I.D.B.I., to assist industrial concerns, (iv) loans for construction of houses under the LIC's various mortagage schemes and (v) loans to State Road Transport Corporation for assisting the transport sector. The total investments of the LIC during 1982-83 under these and other socially oriented schemes was of the order of Rs. 686.17 crores.

The Corporation has also granted certain concessions to policy-holders in the flood-affected areas of Bihar and Orissa states and also the cyclone-affected areas of Gujarat, Orissa and West Bengal by way of (i) condonation of late-fee or interest on premium paid late ; (ii) settling of death claims subject to the deduction of unpaid premia irrespective of the duration for which the policy may have been in force ; (iii) accepting the certificate of the Collector or District Magistrate in case regular proof of death is not available and (iv) issue of duplicate policy free of cost in case policies are lost due to calamity.

The Corporation continues to allow reservations and other concessions/relaxations to members belonging to Scheduled Castes (SCs) and Scheduled Tribes (STs) both in the matter of recruitment and promotion. In order to equip the SC/ST employees in its service with necessary knowhow of the developmental procedures etc., and to bring them on par with the other employees in the discharge of their duties, the Corporation has launched a scheme of conducting special coaching classes for SC/ST employees in zonal headquarters.

Crop Insurance

Crops in every country are exposed to several climatic and other risks. The incidence of these risks is specially high in tropical and sub-tropical regions resulting frequently in crop losses on a catastrophic scale. Most of the farmers in these regions live below subsistence level and cannot afford to bear the crop losses. The basic objective of crop insurance is to protect farmers against crop losses. Moreover, crop losses affect the national economy in many ways and the crop insurance seeks to cushion the shock of disastrous crop losses in bad years, helps to ensure a considerable measure of security in farm income over the years and thus contribute to the stability of the agricultural income, and in turn, the general economy.

In 1972-73, the General Insurance Department of the Life Insurance Corporation introduced a crop insurance scheme on H 4 cotton on an experimental basis in Gujarat under which policies were issued in favour of individual farmers covering climatic risks, pests and plant diseases. This scheme involved coverage to the extent of the pre-estimated cost of cultivation, controlled condition of cultivation, assessment of yields of each industrial farmer and utilising the services of a fertiliser company for field services and yield assessment. Consequent on nationalisation of General Insurance, this scheme was taken over by the General Insurance Corporation of India on 1st January 1973, which then introduced similar schemes in 1974, 1975 and 1976 on different varieties of cotton, wheat and potato crops. But, experience has shown that the schemes on this pattern were not only uneconomic but also unsuitable for implementation on a large scale.

In view of this experience, the G.I.C. felt that if crop insurance is to be transacted on a viable basis in India, suitable techniques should be devised to transact it on a large scale covering all major crops of the country. Under this scheme, it is envisaged that it should be implemented on a pilot basis for three years initially, in partnership with State Governments only in those states where the State Government agrees to share as co-insurer, premia and claims to the extent of 25%, the G.I.C. bearing the balance 75%. Under the scheme, yield in the insured season is guaranteed to the extent of 50 to 80% (the actual percentage depends upon the area) of the coverage yield for the preceding 10 years as per crop cuttings conducted by the State Governments under the technical guidance and co-ordination of the National Sample Survey Organisation. Premia and Indemnities are fixed broadly on the basis that an average farmer in any given area would receive in a period of 10 years indemnities equal to the premium paid by him during that period. The scheme is on a voluntary basis and the premium and indemnity rates differ from crop to crop and season to season. Group policies are issued in favour of district co-operative banks and other crop financing institutions and no direct dealings are envisaged with the farmers since such a procedure would simplify administrative work and reduce costs.

As regards the scope of cover, it is against unavoidable loss of production, due to or arising as a result of climatic risks, pest infestation, plant diseases and riots and strikes. The role of the General Insurance Corporation of India in Crop insurance is limited to devising pilot schemes and implementing them on a selective and limited basis by way of practical research aimed at evolving techniques suitable for transacting crop insurance on a viable basis and on a country-wide scale.

If crop insurance is to progress fast, it is advisable that the Central and State Governments set up new and exclusive arrangements for crop insurance where all the available and necessary expertise could be pooled. In all countries where crop insurance is practised, the Government plays a pre-eminent role by extending financial and administrative support. In view of the very nature of crop insurance, the active involvement of the Central and State Governments would go a long way in advancing the cause of crop insurance in the interest of farmers in general, and small marginal farmers in particular, in order that it may give greater confidence in adopting new and improved farming practices and in making greater investments in agriculture for improving crop yield and increasing agricultural production. Added to the above, the scheme should also aim at the following objectives such as: (i) to encourage self-help and mutual aid among farmers which would, in turn, promote attitudes favourable to co-operative efforts generally; (ii) to help even out fluctuation in supplies and thus stabilise prices; (iii) to prevent migration of enterprising farmers from their rural footholds to urban areas as a result of crop failures; (iv) to prevent or at least to reduce the unemployment and under-employment amongst rural farmers to the extent that crop failures are a contributory cause; and (v) to help replace sporadic haphazard grants and relief operations which governments in most developing countries are frequently called upon to undertake in emergencies by a pre-planned and actually calculated system of compensation awards under which the parties concerned (government and farmers) generally know in advance their respective liabilities, and farmers in particular, know the extent of protection available in case of the unavoidable losses of their crops.

Based on the risks covered, crop insurance is classified into two main types: (i) specific risk insurance and (ii) all risks insurance. The former is transacted for several decades by private insurers while the latter is of recent origin which involves huge financial commitments and is exclusively transacted by the Governments and Government-supported organisations.

It is worth noting that every year fire and road accidents exact a heavy price from people for their carelessness and indifference involving both the guilty and the innocent. The country is poorer by almost Rs. 4 crores a day as buildings go up in flames and industries are razed to the ground, as vehicles careen off the road or smash into each other and as goods in transit are damaged due to poor packaging, mishandling, improper storage or careless transportation. What is not quantifiable and perhaps should be of greater concern is the human aspect of the loss—the very large number of people who are killed, maimed and seriously incapciated and the consequent burden the nation has to bear to rehabilitate them and their families. Most of these losses are avoidable since, not only can they be foreseen but their damage potential can also be reduced by the application of available knowledge and technology.

The practice of insurance has, during the last few decades, contributed considerably to the development of several types of insurance covers with their associated tariffs and rebates, the process of inspection and classification of hazards, the evolution of the profession of surveyors and loss adjusters, the attestation and certification of safety appliances and procedures of insurance-sponsored agencies and the efforts to heighten the safety awareness through organisations such as the National Fire Protection Association of the United States of America and the Protection Fire Association of the United Kingdom are all indications of such loss prevention efforts which sponsored the insurance industry.

Loss Prevention Association (LPA)

The insurance industry in India has long been seized of the problem of loss prevention. Prior to nationalisation of General Insurance in 1971, some of the bigger insurance companies had focused their attention on the problem and, through a judicious blend of rebates, inspection and attestation, have encouraged safety-consciousness in industry and elsewhere. For obvious reasons, they had to devote attention primarily to risks and consignments insured by them. Consequent on nationalisation, it was possible for the General Insurance industry to view the problem from a wider angle. Recognising the urgent need for a body that could co-ordinate loss prevention activities on a national level, the general insurance industry founded the Loss Prevention Association of India Limited in the year 1978. The Association inherited the proud legacy of the fire salvage corps which was formed in 1907 by a group of 37 insurance companies. This corps, probably the first of its kind in this part of the world, had rendered yeoman service to the clients of the insurance industry and to the city of Bombay by protecting and salvaging property affected by fire.

The Loss Prevention Association, apart from extending its activities to the major cities of India, will also widen its spectrum to various spheres including fire, explosions, cargo losses, road safety and industrial safety. The Association has undertaken a sustained programme of publicity, education, training, advisory and consultancy services and other promotional activities to heighten the sense of safety awareness and the adoption of loss prevention technology in India. While it is developing and disseminating information on the technology and viability of loss prevention hardware, it is, at the same time, attempting a more difficult task of creating an environment leading to appropriate management inputs in the area of attitudes, habits and behavioural patterns. The task of loss prevention cannot be accomplished by an association organisation working itself. L.P.A. has always sought the co-operation of all those involved and concerned with loss prevention such as government agencies, research organisations, standards institutions, educational institutions, safety professionals and safety councils, fire services, police authorities, post authorities and connected agencies. It is, therefore hoped that the institutions connected with insurance will continue to grow and flourish and that every responsible and enlightened citizen will play his part in its growth in the overall interests of himself, his family, industry and the nation as a whole.

DEPOSIT INSURANCE AND CREDIT GUARANTEE CORPORATION

The Deposit Insurance Corporation was established by an Act of Parliament on January 1, 1962. With effect from July 15, 1978, it took over the undertaking of the Credit Guarantee Corporation of India Ltd., a public limited company promoted by the Reserve Bank of India on January 14, 1971, with a view to integrating the twin and cognate functions of giving protection to small bank depositors and providing guarantee cover to credit facilities extended to certain categories of small borrowers belonging to the weaker sections of the society. With the integration of the two organisations, the Corporation was renamed as the Deposit Insurance and Credit Guarantee Corporation.

Insurance of Bank Deposits is intended to give a measure of protection to depositors, particularly the small depositors, from the risk of loss of their savings arising from bank failures. Such protection by infusing confidence in the minds of people, assists in developing banking habits and contributes to the growth of the banking system, so that the savings of the community could be utilised for purposes accorded to national priority. Establishment of Deposit Insurance Corporation came in the wake of certain bank failures and consequent efforts to restore the confidence of the depositing public in the banking system by safeguarding their interests.

The introduction of credit gurantee schemes by the erstwhile Credit Guarantee Corporation of India Ltd., was part of a series of measures taken since late sixties. It aimed at encouraging the commercial banks to cater to the credit requirements of the hitherto neglected sectors, particularly, the weaker sections of the society. In the wake of the social control measures indicated in 1968 and followed by nationalisation of major commercial banks, the banks were asked to ensure an increased flow of credit to small borrowers who found it difficult to have access to institutional credit. While there was an increasing awareness among banks of the need to provide more credit to such borrowers, certain practical difficulties, largely stemming from hesitation on the part of credit institutions to venture into new and riskier fields of lending as also their inhibition, particularly at the grass root level to lend except against easily realisable securities were encountered. The Credit Guarantee Corporation of India Ltd., was thus visualised as an agency to provide a simple but wide-ranging system of guarantee for loans granted by credit institutions to such small and needy borrowers. This Corporation was operating credit guarantee schemes pertaining to advances to the non-industrial sector and with the transfer of this undertaking to the Deposit Insurance Corporation in July 1978, the Deposit Insurance Corporation took over those credit-guarantee functions.

A Credit Guarantee Scheme for small-scale industries sponsored and formulated by the Central Government and administered by the Credit Guarantee Organisation (Reserve Bank of India) had been in operation since long. In pursuance of the recommendations of a Working Group constituted by the Government, it was decided that all the credit guarantee schemes should be integrated under the organisation, namely the Corporation, with a view to facilitating effective co-ordination and operational flexibility. Accordingly, the Government cancelled their credit guarantee schemes for small-scale industries with effect from the close of business as on March 31, 1981 and at their request, the Corporation is discharging the obligations of the Government arising out of or accruing under the cancelled scheme, upto the date of cancellation.

With effect from 1st April 1981, the Corporation introduced a Credit Guarantee Scheme of its own for covering advances to small scale industries. With a view to ensuring continuity in the credit guarantee cover, the Corporation's new scheme [viz., Small Loans (Small Scale Industries) Guarantee Scheme 1981] provides guarantee support for all and it facilitates those which have ceased to be covered by the Government's scheme, consequent upon its cancellation. This new scheme combines the beneficial features of the existing schemes of the Corporation for small borrowers engaged in non-industrial activity and the cancelled scheme, at the same time, incorporating improvements designed in the light of the Corporation's experience to facilitate expeditious discharge of guarantee obligations and to ensure that guarantee support under the scheme is weighted in favour of weaker and tinier segments of the small scale industrial sector. Thus, initially the guarantee cover to the extent of as much as 90% was made available to borrowers having credit facilities not exceeding Rs. 25,000 and in respect of advances to technician entrepreneurs (subject to certain monetary ceiling) till February 28, 1983. The guarantee cover to these sectors has, however been brought back to the original level of 75% in respect of eligible credit facilities granted on or after 1st March 1983, as it was felt that with necessary expertise and experience in these fields acquired by the credit institutions their stake in such lendings ought to be at a reasonable level. Guarantee cover of 75% is available for borrowers availing themselves of credit facilities not exceeding Rs. 2 lakhs. In regard to other borrowers the cover is to the extent of 50% but in the case of small scale industrial units located in backward districts a higher cover of 66⅔% is provided. As regards guarantee fee also, a concessional rate of ½% per annum is payable with regard to advances to smaller borrowers availing themselves of credit facilities not exceeding Rs. 25,000 as against the usual rate of ¾% per annum, as in the other guarantee schemes of the Corporation.

The guarantee fee under all the schemes of the Corporation is to be calculated on the basis of the balances outstanding in the guaranteed accounts whereas under the guarantee scheme of the Government, in the case of working capital advances, the fee was to be calculated on the credit limits, in force or the balances outstanding, whichever was higher, and to this extent the Corporation's new scheme is more beneficial to the credit institutions, both in terms of the quantum of guarantee fee payble and also the labour involved in the calculations. Further under the Government scheme, there were separate ceilings of Rs. 2.50 lakhs and Rs. 7.50 lakhs in regard to claim liabilities in respect of term loans and working capital finance respectively. The Corporation's new scheme stipulates a combined flexible ceiling of Rs. 10 lakhs which is more equitable to credit institutions in respect of their term loans.

On the recommendation of the Working Group constituted by the Corporation to consider extension of guarantee cover for credit granted by co-operative credit instituions, the Corporation has formulated yet another scheme viz. Small Loans (co-operative credit societies) Guarantee Scheme, 1982 for extension of such guarantee cover to advances granted by co-operative credit institutions at primary level for agricultural and allied activities as also for consumption and housing loans. In view, however, of the very large number of such institutions to be covered, such guarantee cover is being extended in a phased manner, and to start with, this scheme is made applicable only to selected primary agricultural credit societies and primary land development banks and branches of state land development banks (in states where unitary structure exists) who have been invited to join the scheme from 1st January 1983 onwards. As in the case of the Corporation's other credit guarantee schemes, the participation in this scheme is voluntary and the scheme can be formed by executing the necessary agreement. The advances for eligible purposes sanctioned on or after 1st January 1983 or the date of joining will be covered under the scheme. Guarantee fee of 65 paise per hundred rupees per annum will be payable half-yearly on the amounts outstanding against such eligible advances. The Working Group also recommended that guarantee may be extended to Co-operative urban banks for their advances to non-agricultural sector. Preliminary steps are being taken for the introduction of a scheme in this regard.

The Corporation is a wholly-owned subsidiary of the Reserve Bank of India, its paid-up capital of Rs. 15 crores having been contributed entirely by the Bank. The capital is proposed to be raised to Rs. 50 crores and for this purpose, the Deposit Insurance and Credit Guarantee Corporation Act 1961 is being amended. The Corporation has three funds. Their composition and purposes for which they can be used are as follows :

General Funds: The share capital of the Corporation is held in this Fund. The establishment and other expenses of the Corporation are met entirely from the interest on investments of this Fund.

Deposit Insurance Fund : Built up by premiun received from insured banks and augmented by interest on investments of the Fund, this fund i utilised exclusively to meet the deposit insuranc claims. The balance in the Fund at Rs. 154.0 crores as at the end of 1982 constituted 0.48% o the aggregate insured deposits and 0.36% of th total assessable deposits.

Credit Guarantee Fund

Credit to this Fund mainly comprise guarante fee received for guarantees given by the Corporation and the interest on investments of the Fund This Fund is used solely for meeting the credi guarantee claims. The balance in this fund stoo at Rs. 88.76 crores as at the end of 1982 afte making provision towards the estimated liability for claims intimated but not admitted by th Corporation upto end of 1982 under all its fou credit guarantee schemes. The net surplus o Rs. 88.76 crores which is in the nature of reserv for future claims constituted 1.02% of the tota advances covered by the guarantee schemes of th Corporation at about Rs. 8662 crores. Of th amounts held to the credit of the above Funds those not required for immediate use of th Corporation are invested in securities of th Central Government as required by Law. Repayments received by the Corporation by virtue o its rights of subrogation in regard to insuranc guarantee claims paid are credited back to th respective Funds.

The Management of the Corporation is veste in a Board of Directors constituting of nin members viz a Deputy Governor of the Reserv Bank of India (who is the Chairman), another Officer (presently an Executive Director) of th Reserve Bank nominated by the Bank in thi behalf, an officer of the Central Governmen (nominated by the Government) and six non official Directors nominated by the Centra Government in consultation with the Reserv Bank of India having specialised knowledg of banking, co-operation, finance, accountanc law, small scale industry or allied fields.

sit Insurance Function

eposit Insurance Scheme provides automatic rage for deposits of all functioning commercial ks, received in India. As at the end of 1982, he commercial banks numbering 205 (including Regional Rural Banks) and 1478 Co-operative ks in the concerned States and Union Terri- es stood registered as insured banks under scheme covering about 1598 lakh accounts h aggregate assessable deposits of about Rs. 360 crores. Three states are taking steps to end their respective Co-operative Societies' ts to facilitate extension of the Deposit Insu- nce Scheme to their states. These account a total of 71 co-operative banks. The other ates and Union Territories which are yet to tiate the necessary legislation, account for ly 18 co-operative banks. Under the scheme, the event of liquidation, reconstruction or nalgamation of an insured bank, every depositor that bank is entitled to repayment of his depo- ts in all branches of that bank held by him in the me capacity and right, subject to a monetary iling which was initially fixed at Rs. 1500 and as since been raised gradually to Rs. 30,000. he percentage of the number of fully protected ccounts i.e., accounts with amounts upto Rs. 0,000 to the total insured accounts is as high as 8.9. In the case of smaller banks viz., all egional rural banks, commercial banks and o-operative banks with deposits of Rs. 1 crore r less, the coverage is near total i.e. ranging rom 99.8% to 99.9%. The remaining accounts e partially protected by insurance. The propor- ion of insured deposits in total assessable depo- ts too, stands at an impressive level of about 75%. The consideration for extension of insu- rance coverage to banks is payment of an insurance premium which is collected from them at the rate of 4 paise per annum per hundred rupees; this rate was initially fixed at 5 paise and brought down to the present level with effect from October 1, 1971. The banks are required to bear this burden themselves so that the protection of insurance is available to the depositors, free of cost. The premium is collected at half-yearly intervals.

When a bank goes into liquidation, the Corporation pays to every depositor, through the liquidator, the amount of deposits upto Rs. 30,000. When a bank is reconstructed or amalgamated with another bank and the scheme of reconstruction or amalgamation does not entitle the depositor to get credit for the full amount of his deposit, the Corporation pays to each depositor through the reconstructed transferee bank, the difference between the full amount of his deposit (or Rs. 30,000 whichever is less) and the amount actually received by him under the scheme of reconstruction/amalgamation.

The Corporation has, since the inception of the Scheme, paid or provided for a sum of Rs. 113.02 lakhs in respect of 14 commercial banks. Of these cases of reconstruction and amalgamation were 2 and 11 respectively; and in one case, the licence to carry on banking business in India was cancelled by the Reserve Bank. As regards co-operative banks, an amount of Rs. 190.66 lakhs has been paid upto the end of 1982 covering 6 cases of liquidation and 5 cases of amalgamation.

After settling the claims, the Corporation steps into the shoes of the depositors and recoveries effected, by virtue of such rights of subrogation have been of the order of Rs. 93.28 lakhs, of which Rs. 79.86 lakhs was in respect of commercial banks (the dues have been fully repaid in the case of two banks) and Rs. 13.42 lakhs in respect of co-operative banks.

Credit Guarantee Function

The three credit guarantee schemes designed to cover small loans, which were formulated by the Credit Guarantee Corporation of India Ltd, and are continued by the Corporation are intended to provide the necessary incentive to financial institutions for extending need-based credit to small borrowers engaged in non-industrial activities, in accordance with national priorities. In addition, the Corporation has, introduced with effect from 1st April 1981, a credit guarantee scheme for covering advances to small scale industries. The Corporation has also formulated another credit guarantee scheme relating to co-operative sector, viz. Small Loans (Cooperative Credit Societies) Guarantee Scheme 1982, and has invited participation of select co-operative credit institutions from 1st January 1983 onwards.

The Small Loans Guarantee Scheme 1971 which came into force on 1st April 1981, covers credit facilities granted by commercial banks including regional rural banks to agriculturists, transport operators, retail traders, small business enterprises and professional and self-employed persons.

The Second Scheme i.e., Small Loans (Financial Corporations) Guarantee Scheme 1971, was introduced on 1st July 1971 which covers credit facilities granted by the State Financial Corporations to transport operators and hoteliers and other business enterprises engaged in generation or distribution of electricity or other power or in the development or management of an industrial estate or a transport undertaikng.

The Third Scheme i.e., Service Co-operative Societies Guarantee Scheme 1971 is in force from 1st October 1971 and it covers credit facilities granted by all scheduled commercial banks and state and central co-operative banks covered by the Deposit Insurance Scheme to service co-operative societies engaged in providing to their members facilities such as securing of orders, purchase of raw materials, the display and marketing of finished goods or any other similar assistance in connection with the manufacture, display, presentation and processing of goods and marketing of such goods.

The Fourth Scheme i.e., Small Loans (Small Scale Industries) Guarantee Scheme 1981 covers credit facilities granted by commercial banks, regional rural banks, co-operative banks, state financial corporations and state development agencies to small scale industrial units for acquisition of, or repairs to, or replacement of fixed assets or equipment and for working capital requirements for production and marketing of products. The Fifth Scheme i.e., Small Loans (Co-operative Credit Societies) Guarantee Scheme 1982 covers credit facilities granted by select primary agricultural credit societies (PACS) and primary land development banks (PLDB's)/branches of State Land Development Banks (SLDBs) to their farmer/agriculturist members (including share-croppers and landless labourers) for agriculture and allied activities, as also for consumption and housing finance. Thus initially the scheme is open only to those PACS which enjoy audit classification 'A' or 'B' continuously for the last 3 years (from 1978-79 to 1980-81), have full-time paid Secretary and which are affiliated to Central Co-operative Banks with 'A' Class audit classification for a similar period of 3 years (from 1978-79 to 1980-81). Likewise, those primary land development banks/branches of State land development banks (in states where there is a unitary structure) which do not have overdues exceeding 25% of demand and which have unrestricted eligibility for fresh lending continuously for the last 3 years (1978-79 to 1980-81) can also join the scheme. The agricultural and allied activities covered by the scheme include seasonal agricultural operations, reclamation or improvement of land, construction or deepening of irrigation wells, installation of pump sets, purchase of cattle or acquisition of other capital assets (e.g. farmhouses, cattle sheds, gobar gas plants) or repairs to these assets, sericulture, animal husbandry, poultry farming, dairy farming, pisciculture, housing finance, consumption finance and advances for acquisition of shares of other co-operative societies etc., as explained in the scheme.

Participation in the Guarantee Schemes of the Corporation is voluntary and the guarantee facilities under each scheme are available to only such institution as may join it by executing the necessary agreements with the Corporation. Once, however, a credit institution so joins the scheme the guarantee cover is automatic and covers, in bulk, from the date of first disbursal, all eligible credit facilities granted to specified categories of borrowers and for purposes mentioned in the scheme, without requiring the credit institution to make a prior application to the Corporation for covering each credit facility. It is not open to participating credit institutions to exclude any eligible credit facility from the purview of guarantee cover.

The Guarantee Schemes are meant to provide cover for advances granted to small borrowers who, without such support, may find it difficult to have access to institutional credit. To ensure that the benefits thereof do not gravitate to more affluent persons, several stipulations have been made in the guarantee schemes, such as ceilings on sales turnover as in the case of retail traders and the value of equipment as in the case of business enterprises and of plant and machinery in the case of small scale industrial units. Besides, absolute limits have been placed on the Corporation's claim liability. The Schemes, in general, provide guarantee facilities to direct lendings to the ultimate beneficiaries. In tune with the objective of facilitating small borrowers obtaining easy access to institutional credit, the provision of the guarantee schemes are subjected to a constant review and liberalisations effected in the light of experience gained and suggestions received from the participating institutions.

The consideration for extension of the guarantee cover is payment of a guarantee fee by the credit institutions at the stipulated rates calculated on the balances outstanding in the guaranteed accounts and paid half-yearly in advance. Three conditions have to be complied with before a claim under the guarantee can be preferred by a credit institution. These are : (i) the advance under the guarantee has not been repaid within one month from the date on which a notice of demand for repayment of the entire dues has been served on the borrower ; (ii) the advance is treated by the credit institution as bad or doubtful of recovery ; and (iii) it is provided or accounted for as such in the books of the credit institution. The Corporation would expect credit institutions to take effective steps against borrowers, sureties and the securities whenever realisable before invoking the guarantee.

After payment of the claims, the claimant institutions are required to take effective steps to recover the dues and remit to the Corporation its share of the recoveries effected less expenses incurred for such recovery. The time given to the credit institution to pass on the recoveries effected in claim-paid accounts has been increased from one month to three months effective from July 1981. As at the end of December 1982, 178 commercial banks (including 103 regional rural banks and 3 non-scheduled banks) had joined the Small Loans Guarantee Scheme 1971 while all the 17 State Financial Corporations and the Tamil Nadu Industrial Investment Corporation Ltd. are participating in the Small Loans (Financial Corporations) Guarantee Scheme 1971. The number of credit institutions participating in the Service Co-operative Societies Guarantee Scheme 1971 was 142 which included 61 commercial banks, 44 regional rural banks and 37 co-operative banks. The number of participants in the Small Loans (Small Scale Industries) Guarantee Scheme 1981 as at the end of 1982 was 305. All the 28 public sector commercial banks, most of the regional rural banks and private sector commercial banks, a majority of the State Financial Corporations, other State Development agencies and a large number of co-operative banks have since joined the scheme.

In recent years, there has been a substantial increase in the flow of institutional credit to the weaker sections of the community covered by the guarantee schemes which may not have been feasible without the guarantee cover provided by the Corporation. To that extent, the objective in introducing the system of credit guarantee support could be considered to have been substantially fulfilled. Total advances covered by three guarantee schemes relating to non-industrial sector have increased from Rs. 208.39 crores as at 30th June 1972 to Rs. 4839.88 crores as on 30th June 1982. The guaranteed advances to small scale industries as on 30th June 1982 amounting to Rs. 3822.13 crores showed an increase of Rs. 105.70 crores as compared to guaranteed advances of Rs. 3716.43 crores as on 31st March 1981, when the Government's scheme was cancelled. Sectorwise advances to farmers and agriculturists constituted 62.9% of the total guaranteed (non-industrial) advances, followed by 15.5% credit to transport operators, 10.6% to retail traders, 4.3% to business enterprises, 4.1% to professional and self-employed persons and 2.6% to residual category of borrowers under the Differential Rate of Interest Scheme.

As regards non-industrial advances, 4,23,250 claims involving Rs. 82.62 crores have been received by the Corporation, upto the end of 1982. Of these, claims pertaining to credit facilities granted to farmers and agriculturists account for 47.7% of the total claims in terms of number and 54.8% in terms of amount, followed by transport operators (6.3% and 20.7%), retail traders (21.2% and 13.8%) and professional and self-employed persons (17.2% and 6.4%). With regard to advances to small scale industries, 5321 claims amounting to Rs. 11.14 crores were received upto the end of 1982 under the Corporation's Scheme for SSI units introduced from 1st April 1981, whereas, in respect of Government's Scheme for SSI units (which was cancelled at the close of business on 31st March 1981 and where the Corporation is acting as an agent of Central Government for the discharge of the residual functions) the Corporation has in addition to taking over 30,826 claims for Rs. 98.18 crores as on 1st April 1981 from Reserve Bank, received further 24,358 claims for Rs. 41.09 crores upto the end of 1982 for disposal on behalf of the Government of India.

Of the 4,23,250 claims received in respect of non-industrial advances, 2,79,796 claims amounting to Rs. 46.43 crores have been disposed of. The claims rejected constitute 2.4% in terms of number and 11.1% in terms of amount of total claims disposed of. Regarding the claims relating to advances to small scale industries under the Corporation's scheme, out of 5321 claims for Rs. 11.14 crores, 3105 claims for Rs. 2.13 crores have been disposed off. As regards claims under Government's Scheme (since cancelled) 25,892 claims for Rs. 35.12 crores were disposed of on behalf of Government of India.

The recoveries effected in the claim paid accounts relating to the Corporation's schemes upto the end of 1982 amounted to Rs. 508.99 lakhs, of which, the recoveries in 1982 alone amounted to Rs. 189.26 lakhs. The total realisations work out to 12.7% of the aggregate amount of claims paid under these schemes till the end of 1982. Till 1980, the Corporation has been operating three schemes providing guarantee support to credit extended by participating institutions to non-industrial sector. In 1981, with the integration of credit guarantee functions relating to small scale industries, the Corporaion has been provided guaranteed support to substantial amount of credit granted under the priority sectors. The Corporation has also now extended the facility of guarantee support on a selective basis to the credit provided by certain co-operative credit institutions at the primary level for agricultural and allied activities. It hopes to introduce another scheme to cover non-agricultural advances granted by urban co-operative banks.

It has been the endeavour of the Corporation to continuously strive for the fulfilment of its objectives viz. to give protection to the small depositors and encourage flow of credit to the weaker sections of the community for their production efforts. In these efforts, the Corporation has been receptive to advice aimed at improving the economic conditions of the less privileged classes of society whom it seeks to serve and will welcome further suggestions towards their end.

INVESTMENT TRUSTS AND FINANCIAL INSTITUTIONS

OVER the years, the financial institutions have emerged as crucial growth catalysts by providing substantial amounts of financial assistance to industry. Apart from mobilising and providing adequate and timely assistance, the financial institutions have brought about a high degree of qualitative change in the corporate sector and have succeeded in directing their investment into socially and economically desirable channels. With the view to augmenting the resources for supporting growth investment activities, these institutions are exploring all possibilities of tapping conventional as well as non-conventional sources of funds.

THE INDUSTRIAL FINANCE CORPORATION OF INDIA (IFCI)

The IFCI was established by the Government in 1948 under a Special Act, with an authorised share capital of Rs. 10 crores divided into shares of Rs. 5,000 each, which has now been raised to Rs. 50 crores. The Industrial Development Bank of India, scheduled banks, insurance companies, investment trusts and co-operative banks are shareholders of the IFCI. The 'Corporation is authorised to issue bonds and debentures in the open market, to borrow foreign currency from the World Bank and other organisations and to accept deposits from the public. The Amendment Act of 1982 has also removed limitations on the borrowings of the IFCI. The IFCI. has been empowered to raise funds, apart from the Central Government and IDBI, from such other authority or institution in India as may be approved by the Central Government. The Act also enables the IFCI to borrow from the Reserve Bank of India upto a sum of Rs. 15 crores for augmenting its working funds as and when necessary.

The Corporation is expected to perform three important functions. In the first place, it grants loans and advances to industrial concerns and subscribes to the debentures floated by them. Secondly, it guarantees loans raised by the industrial concerns in the capital market. Thirdly, it underwrites the issue of stock, shares, bonds and debentures of industrial concerns provided such stocks, shares etc. are disposed of by the Corporation within a period of seven years from the time of acquisition. In addition to the above, the Corporation also aims at providing: (i) encouragement to new entrepreneurs and technocrats in project planning and implementation; (ii) concessional finance for new projects in notified industrially backward districts; and (iii) special consideration for schemes of modernisation of existing units.

Before granting loan to any industrial concern applying for financial assistance, the Corporation scrutinises the application carefully and the following points are evaluated: (*a*) the importance of the industry to the national economy; (*b*) the feasibility and the cost of the scheme for which finance is required; (*c*) the competence of the management; (*d*) the nature of security offered; (*e*) the adequacy of the supply of technical-personnel, raw materials etc.; and (*f*) the quality of the product and the country's requirement of the product manufactured.

The IFCI's contribution to the industrial development has been substantial, which can be judged by the benefit that has flown from its direct financial assistance to diversified industries. The two major recipients of the IFCI's assistance are sugar and textile industries. Most of the industrial units which have come up in less deveoped districts are largely in the co-operative sector. These have helped to transform the rural scene, by not only canalising the savings of the agricultural sector for industrial use but also have provided, larger avenues for both direct and indirect employment due to their labour-intensive nature. Likewise, the aid given to fertilisers, pesticides, agricultural machinery and transport equipment has helped in boosting the agricultural production in the country.

The IFCI, during the period stretching over thirty-five years of its service to Indian industry, has continued fulfilling the objectives set under its charter in an appreciable measure not only quantitatively but also qualitatively. Depending upon the level of economic activity and growth in a particular region/state/territory, the IFCI's assistance has practically reached all places wherever a medium or large sized industrial unit has come up. The total sanctioned assistance during the period of 35 years ended 30th June 1983, amounted to Rs. 1818.33 crores covering 1705 industrial projects spread all over the country. This assistance was extended to 236 projects in the co-operative sector, 139 projects in the joint sector, 181 projects in the public sector and 1149 projects in the private corporate sector. Of the total sanctions aggregating to Rs. 1818.33 crores, 89% was in the form of rupee loans. While underwriting and direct subscriptions constituted 7.4%, the share of guarantees for deferred payments and foreign loans amounted to 3.6 per cent. More important than the quantum of assistance directly sanctioned by the IFCI is, its catalytic role which has been instrumental in overall resource mobilisation.

In the cumulative financial assistance sanctioned by the IFCI upto 30th June 1983 amongst the States, Maharashtra with its 320 projects claimed assistance of the order of Rs. 298.79 crores (16.4 per cent) followed by Uttar Pradesh—170 projects with the assistance of the order of Rs. 186.75 crores (10.3 per cent), Gujarat—163 projects with an assistance of Rs. 193.23 crores (10.6 per cent), Andhra Pradesh—148 projects with an assistance of Rs. 153.27 crores (8.3 per cent), West Bengal—145 projects with an assistance of Rs. 115.45 crores (6.3 per cent), Tamil Nadu—137 projects with an assistance of Rs. 166.36 crores (9.1 per cent) and Karnataka—137 projects with an assistance of Rs. 147.44 crores (8.1 per cent). The remaining 30.8 per cent of assistance sanctioned was shared by other States and Union Territoies.

Sectoral Classification of Assistance

Co-operative Sector: Amongst the co-operatives, 172 sugar co-operatives with an assistance of Rs. 176.54 crores claimed 71.6 per cent of the total assistance sanctioned to the co-operative sector, followed by 58 co-operative cotton spinning mills with an assistance of Rs. 48.44 crores (i.e. 19.7 per cent). Six other co-operatives in industries such as fertiliser and pesticides, synthetic fibres, jute and miscellaneous chemicals accounted for Rs. 21.51 crores (i.e. 8.7 per cent). The assistance to co-operative sector has proved to be an effective instrument for rural reconstruction and development. It is not unoften, that coming into being of an industrial co-operative in an area has brought in its wake such amenities as improved roads, irrigation, provision of drinking water, setting up of schools and hospitals, apart from giving an impetus to the setting up of village and ancillary industries. The co-operatives have also helped in canalising savings of agricultural sector for the industrial and productive use and have provided larger avenues for both direct and indirect employment, namely in the rural areas.

Corporate sector : In the Corporate Sector, the major beneficiary has been the Private Sector which had claimed upto the 30th June 1983, assistance of the order of Rs. 112.98 crores for 1149 projects. This constituted 71.6 per cent of the total assistance sanctioned by the IFCI to corporate sector till 30th June 1983. The next in order were 181 projects in the Public Sector with an assistance of Rs. 226.60 crores and 139 projects in the Joint Sector with an aggregate assistance of Rs. 220.26 crores.

Amongst the industries assisted in the Corporate Sector, the maximum share in the assistance was taken by 314 textile projects with an assistance of Rs. 272.48 crores. The next in importance were 115 iron and steel projects with an assistance of Rs. 117.28 crores followed by 102 projects with an assistance of Rs. 193.59 crores. Under the head machinery, 99 cement projects claimed assistance of the order of Rs. 193.59 crores. 95 projects in the corporate sector belonged to paper industry which had accounted for Rs. 136.27 crores. The other industries covered in the corporate sector pertained to basic industrial chemicals, fertilisers and pesticides, sugar, electricity and gas, rubber products, metal products, jute, hotel, miscellaneous manufacturing industries, etc.

Purpose-wise Classification of Assistance

Of the total assistance of Rs. 1818.33 crores sanctioned upto 30th June 1983, Rs. 1145.92 crores (63 per cent) were accounted for by new projects whose total capital outlay aggregated to Rs. 9350.27 crores. The existing projects cliamed assistance to the tune of Rs. 364.89 crores (20.1 per cent) for their expansion and diversification schemes. Assistance for modernisation and renovation of the projects aggregated to Rs. 307.52 crores (16.9 per cent) which included assistance of the order Rs. 177.68 crores sanctioned under the Soft Loans Scheme.

Area-wise Classification of Assistance

In terms of the Directives issued to it, the IFCI has been giving particular attention to the industrial development of less developed states/territories right from its inception so as to help a balanced economic development in the country. Upto 30th June 1983, the IFCI has sanctioned financial assistance aggregating to Rs. 846.65 crores to 728 projects located in the notified less developed districts/areas. This constitutes 46.6 per cent of the IFC's net cumulative sanctions. Out of the total assistance of Rs. 846.65 crores sanctioned to projects in notified less developed districts/areas, Rs. 676.08 crores was sanctioned in the form of rupee loans, Rs. 74.20 crores in the form of sub-loans in foreign currencies, Rs. 80.91 crores in the nature of underwriting/direct subscription facilities and Rs. 15.46 crores in the form of guarantees.

The economic and social impact of the IFCI's assistance to projects in notified less developed districts/areas is evidenced by the developmental impact created by these projects in improving the economic well-being of the local people and strengthening the social infrastructure. Since most of the projects in notified less developed districts/areas have been set up in rural and/or semi-urban places, the economy of these areas has undergone a sea-change. The projects have contributed substantially to the generation of direct as well as indirect employment and have also provided impetus to the setting up of small-scale and other ancillary units.

During the 35 years of its existence, the IFCI has disbursed upto 30th June 1983 financial assistance of Rs. 1345.54 crores comprising of rupee loans of Rs. 1065.98 crores, foreign currency loans of Rs. 169.98 crores, underwriting and direct subscriptions of Rs. 55.07 crores and guarantees of Rs. 54.51 crores. This represented nearly 74 per cent of the total sanctions accorded upto 30th June 1983.

Against a disbursement of Rs. 1235.96 crores upto 30th June 1983, towards rupee and foreign currency loans, the outstanding balances of these loans, as on that date aggregated to Rs. 864.73 crores. This represented 69.96 per cent of the assistance disbursed.

TABLE 1

Facility-wise Classification of Total Sanctions, Disbursements and Outstandings (1948—1983)

(Rs. in crores)

Nature of assistance	Sanctions (net)		Assistance Disbursed Rs.	Amount Outstanding Rs.
	Number of sanctions	Amount Rs.		
(1)	(2)	(3)	(4)	(5)

THE INDUSTRIAL DEVELOPMENT BANK OF INDIA (IDBI)

The IDBI, established in 1964 as a wholly-owned subsidiary of the Reserve Bank of India, has been assigned a crucial role in planning, promoting, developing and financing industries in the country in accordance with the socio-economic objectives of the nation, the specific plan priorities, and the need to fill up the gaps in our industrial structure. The bank is required to discharge this responsibility by providing direct financial assistance to industrial units and extending indirect financial assistance by helping other financial institutions doing promotional work and acting as a co-ordinating agency. Indeed, it has been provided with huge finacinal resources and wide powers to do almost everything to promote industrial development in the country.

The bank's financial assistance registered a spectacular rise from an average of Rs. 58 crores during the first quinquennium of its working (1964-69) to Rs. 133.15 crores and Rs. 650.98 crores during the second and third quinquennia respectively, and further to Rs. 2174.8 crores in 1982-83. The cumulative assistance sanctioned and disbursed by the IDBI till June 30, 1983 aggregated to Rs. 10315.8 crores and Rs. 7386.9 crores respectively. The total amount outstanding as on June 30, 1983 stood at Rs. 5091.6 crores a year ago. Of the total financial assistance sanctioned by the bank during 1964-83, the share of indirect financial assistance in the form of refinance, re-discounting, subscription to shares and bonds of financial institutions and seed capital assistance was the highest (60 per cent) followed by direct financial assistance namely, schemes of project finance, soft loans and technical development fund assistance—30.3 per cent and export finance—9.7 per cent in that order.

Among the bank's different schemes of financing, re-finance of industrial loans with a share of 38 per cent occupied the pride of place followed by project finance assistance—25.6 per cent and re-discounting of bills—18.75 per cent. The share of all other schemes taken together was around one-fifth of the total. Valuable, though the financial assistance of the IDBI has been, it is obvious that the bank has outgrown its supplementary role as a gap-filler and has assumed the character of a normal financing agency, competing with other term financing institutions in extending financial assistance to industrial concerns.

Purpose-wise Financial Assistance

Purposewise, the IDBI's assistance takes three forms viz., assistance to new projects, assistance to the existing projects for expansion, diversification, modernisation, rehabilitation ; and subscriptions to right issues of shares and supplementary assistance to meet cost overruns. Of the bank's total assistance during 1964-83, existing projects claimed 53.3 per cent, new projects 39.6 per cent and supplementary assistance 7.1 per cent. About two-thirds of the assistance under the project finance scheme was claimed by new projects while the bills rediscounting assistance went exclusively to the existing projects.

State-wise Financial Assistance

A statewise distribution of the bank's assistance shows that the five industrially advanced States of Maharashtra, Gujarat, Tamil Nadu, West Bengal and Karnataka with less than 38 per cent share in the country's population claimed over 54 per cent of the bank's assistance during 1964-83. It is clear that the North-Eastern, Eastern Central and Northern regions were neglected in the matter of the IDBI's assistance, their share ranging from 1.3 per cent (North Eastern Region) to 12.2 per cent (Northern region). Thus, the geographical distribution of the bank's assistance was far from satisfactory. Although there has been some improvement in this regard with the share of industrially advanced states in the bank's total assistance declining from 73.7 per cent during 1964-69 to 49.6 per cent in 1982-83, with a corresponding increase in the share of other states and Union Territories, much ground still remains to be covered.

Sector-wise Financial Assistance

Development banks in most other countries cater to the financial and other needs of the private sector only. However, the IDBI is permitted by its statue to assist all the four sectors—private, public, joint and co-operative, of the Indian Economy. It has provided over three-fourths of its total assistance so far to the private sector,the share of the public,joint and co-operative sectors being 13.3 per cent, 6.9 per cent and 3.4 per cent respectively. It may be noted that Government companies account for over 70 per cent of the total paid-up capital of all companies at work in the country and in the light of this, their share in the IDBI's assistance appears to be very low. This is because Government companies were permitted to seek long-term assistance from public financial institutions only in November 1971 and even thereafter they have preferred to rely mainly on government funds. A notable feature of the sectoral distribution of the IDBI's assistance was that while direct financial assistance accounted for a dominant share ranging from 62 per cent to 95 per cent in respect of public, joint and co-operative sectors, the flow of assistance to the private sector was largely in the form of indirect financial assistance. The small sector which used to claim on an average around 20 per cent of the IDBI's total assistance during the years 1970-71 to 1977-78 has now come to claim a vastly increased share of total assistance. During the four years 1978-79 to 1981-82, the share of the small scale sector rose on an average to around 35 per cent of the total sanctions. In 1982-83, the small scale sector claimed 40.6 per cent of total sanctions. The number of small sector units, assisted under refinance and bills re-discounting schemes has increased even more sharply by nearly seven times to 76100 in 1982-83 from 11,432 in (1977-78).

Financial Assistance to Backward Areas

Promoting a balanced development of different regions of the country has all along been a cherished objective of national policy. The IDBI's assistance to backward areas is financial as well as non-financial. While financial assistance flows largely in the form of concessional finance through its schemes of direct financial assistance, refinance assistance and bills re-discounting assistance, non-financial assistance takes the form of industrial potential surveys, identification of project ideas and entrepreneurs, preparation of detailed project report, provision of training to potential entrepreneurs, managerial and technical assistance to industrial units in the backward areas, etc. For the discharge of its promotional functions, the bank has set up nine Technical Consultancy Organisations and has created Technical Assistance Fund. The IDBI's assistance to projects in backward areas amounted to Rs. 4227.02 crores during 1964-83, constituting 36.3 per cent of its total assistance. Of this, 56 per cent was provided by way of indirect assistance and the rest in the form of direct financial assistance.

New Policy Initiatives

The IDBI, along with the IFCI and the ICICI has formulated a new package of incentives for stepping up industrial growth especially in 'No Industries Districts'. The existing ceilings on concessional assistance to units in backward areas at Rs. 2 crores for loans and Rs. 1 crore for underwriting assistance have been raised to Rs. 5 crores and Rs. 2.5 crores for projects in 'A' districts and to Rs. 3 crores and Rs. 1.5 crores for 'B' category districts. To encourage the development of small and medium enterprises, the IDBI will now provide 100 per cent refinance to State Financial Corporations and State Industrial Development Corporations against their loans to such projects in 'A' category districts. Besides, the promoters contribution in respect of such projects will now be reduced from 17.5 per cent to 10 per cent of project cost.

Recognising the need for accelerated flow of financial assistance for medium enterprises and in line with the liberalised government licensing policy, the IDBI has decided to raise this ceiling on project costs from Rs. 2 crores to Rs. 3 crores for new as well as projects under expansion, diversification and modernisation. Simultaneously, the ceiling on term loans eligible for refinance from the IDBI has also been enhanced from Rs. 140 lakhs to Rs. 200 lakhs per project. With these liberalisations, financial requirements of projects upto Rs. 3 crores will now be met by State-level institutions and banks. The IDBI has decided to extend direct assistance for financing industrial estates costing more than Rs. 3 crores per project. Under the project participation scheme, projects costing up to Rs. 10 crores are covered at present. The IDBI has now decided to extend the scope of this scheme to cover all projects irrespective of their capital costs. In keeping with the objectives underlined in the new 20-point programme, the automatic refinance scheme in respect of loans up to Rs. 5 lakhs has been modified to streamline and simplify the procedure.

PEERLESS GENERAL FINANCE & INVESTMENT CO. LTD.

Peerless General Finance & Investment Company Limited has become a household name not only in metropolitan centres of India but also deep in the countryside because of its unique role as a highly successful small savings collection agency. It is a non-banking savings company which collects money from small savers through endowment certificates more or less in the same line as the Life Insurance Corporation which issues policies under its endowment insurance scheme. The total assets of the Company stand at a staggering figure of over Rs. 400 crores as on 31st December 1983.

The achievement of Peerless is unique and beyond any comparison. In fact, today's much trumpeted ' small savings ' concept was the brainchild of Peerless. The company has set up a new business target of Rs. 3,000 crores in the current year. In the background of the ever-escalating growth rate being all the while maintained by the Company, it is fairly expected that Peerless would doubtless be able to fulfil this target. Besides, the Company's up-to-date performance is a clear pointer to the fact that this year too, conforming with its tradition, Peerless will hit the target quite comfortably.

As a private savings company, Peerless controls more money than the nationalised banks. Even the mammoth Public Sector Life Insurance Corporation of India sees it as a competitor. Peerless exhibits a keen sense of responsibility in regard to the security of Certificate holder's money. In fact, the way Peerless has tightened up its security measures is unique. The Certificate holder's funds are put in fixed deposits with nationalised banks and partly in gilt-edged securities, the two forms of investments that are by any standard the safest in the country. Peerless has shown commendable restraint and prudence in its operations that have helped it to gain the confidence of millions of small savers. Added to it, this institution is said to be very prompt in settling the claims on maturity which goes a long way in motivating the public and bringing them closer to it.

The Company's social welfare scheme is almost identical to the Pure Endowment Scheme of the L.I.C., except for the fact that the L.I.C. does not cover life-risk for the scheme under Table 21 whereas the Peerless has provided the free benefit of insurance against accidental death by arrangement with National Insurance Co. Ltd. The Company has since long been pleading with the Government that it should be allowed to do life insurance business as well. Like all growing organisations, Peerless wants to diversify. It wants to be given the status of an approved organisation so that it may operate in the inter-bank call money market to utilise its temporarily unemployed funds and help trade and industry via the country's banking system. It also wants to be authorised to collect the savings of non-resident Indians, enter the credit card, consultancy and computer services and offer low cost housing loans.

Though much good is said about Peerless, yet, it is not free from controversial issues. The Peerless is under attack from a formidable trio : The West Bengal Government, the Reserve Bank of India and the Life Insurance Corporation of India. Even the Central Government is now beginning to take interest in the matter. The ball was set rolling by the Reserve Bank of India's study of Peerless some time ago, which, came up with a series of disturbing findings. One startling discovery was that about 48 per cent of the savings certificates lapsed within two years of being started, and according to the Company's rule, money deposited against the certificates lapsed would ordinarily not be refunded to the depositor. In other words, close to half the depositors lose their money. Peerless's canvassing agents at various rungs in the ladder get a total commission of 70 per cent of the initial deposit but only 5 per cent of subsequent deposits. Inevitably, the agent's efforts were aimed at drumming up fresh customers and not at ensuring that existing certificates continued without lapsing. The Company's interest was centered round anything that was on the side of a high lapse ratio, since, that way it kept the money that had been paid to it. Some depositors have even complained that agents tend to positively discourage them, if they want to make renewal deposits that will keep their certificates alive. A second charge levied against the Peerless is that it gives its savings schemes the colour of life insurance policies first by using terminology traditionally used in the life insurance business, and then by printing promotional literatures that compares Peerless Schemes with those of Life Insurance Corporation. In reality, Peerless is not in a position to offer life insurance. All it offers is accident insurance cover under an arrangement with the General Insurance Corporation of India. The third charge is that the Company follows accounting procedures that understate its liability to its depositors—a point made by the Reserve Bank of India's study which discovered that the first year's deposit were not shown in the books as liabilities to the depositors, but as revenue to the Company. This immediately brought into question, Peerless's overriding claim that all its deposit liabilities were more than covered by its investments in government securities and banks.

Notwithstanding all these charges levelled against it, the Company is confident that by the time of Diamond Jubilee year i.e. 1992, the Peerless team will be capable of (*a*) contributing a total fund of Rs. 2,000 crores to the national exchequer, (*b*) creating self-employment opportunities for a total of one million of wholetime workers ; and (*c*) carrying the benefit of small savings to the doorsteps of at least one out of every ten citizens of India by the year 1992.

STATE FINANCIAL CORPORATIONS (SFCs)

State Financial Corporations were set up with a view to meeting the term loan requirements of the small and medium scale industries within their respective geographical areas of operation usually a State, but a few of them are also catering to the needs of adjoining States/Union Territories which do not have SFCs of their own. The Tamil Nadu Industrial Investment Corporation was the first SFC to be established in 1949 followed by seventeen SFCs which were set up under the State Financial Corporations' Act of 1951. Under the statute, the SFCs are permitted to grant loans and underwriting assistance to industrial units whose paid-up capital and reserves do not exceed Rs. 100 lakhs. The maximum amount that an SFC can provide to any one industrial unit is fixed at Rs. 30 lakhs. As the apex financial institution, the Industrial Development Bank of India provides substantial resource support to these Corporations. In the initial years the SFCs managed their finances by conforming to rigid rules and restricted lending to ' safe security ' criteria, but in recent years, SFCs seem to have stepped up considerably their sanctions and disbursements of loans in their efforts, to higher and higher targets. By the end of the financial year 1982, SFCs sanctioned (cumulatively) Rs. 2,376.22 crores to 1,45,253 units and disbursed Rs. 1,619.44 crores.

SFCs assistance sanctioned & disbursed

(Rs. in Crores)

1979-80	17816	263.82	184.75
1980-81	28915	370.54	247.96
1981-82	31498	501.05	315.38
Cumulative upto end of March 1982	145253	2,376.22	1,619.44

Source : ' Economic Times ' 24th March 1984.

The two focal points of SFCs activities have been (i) assistance to the small scale sector and (ii) assistance to backward areas. The share of the small scale sector (including the small road transport operators) in the total assistance from SFCs has always been high and has been consistently increasing in recent years. The share of small units in the total sanctions of all SFCs has increased from 63.1 per cent in 1979-80 to 69.5 per cent in 1981-82. The sanctions to units in specified backward areas rose from Rs. 139.05 crores in 1979-80 to Rs. 231.82 crores in 1981-82. Cumulatively, of the total assistance by SFCs as at the end of March 1982, the share of backward areas was Rs. 1,082.17 crores.

SFCs assistance to backward areas

(Rs. in Crores)

Year	Sanctions		
	Backward	Total	Per cent
1977-78 ..	92.62	166.09	55.8
1978-79 ..	113.56	200.73	56.6
1979-80 ..	139.05	263.82	52.7
1980-81 ..	192.81	370.54	52.3
1981-82 ..	231.82	501.05	46.3
Cumulatively upto March 1982 ..	1,082.17	2,376.22	45.5

Source : ' Economic Times ' dt. 24th March '84.

The overdues at the end of March 1982 constituted 22.8 per cent of the aggregate outstanding assistance of Rs. 1167.3 crores. The recoveries made during the years 1980-81 and 1981-82 were Rs. 111.94 crores and Rs. 183.70 crores respectively which represented 0.2 per cent and 39.3 per cent of the amounts recoverable. Between the years 1977 and 1982, the total overdues of the SFCs have increased from Rs. 92 crores to Rs. 267 crores.

The total requirement of funds by all the SFCs during 1981-82 was Rs. 523.45 crores. Over 60 per cent of the funds required was for disbursal of assistance which registered an increase of about 29 per cent over the previous year. The repayment of debts to the Government, RBI and IDBI, redemption of bonds and repayment of deposits aggregate Rs. 119 crores, that is, about 22.7 per cent of the total requirement. The internal generation of funds financed 37 per cent of the requirements in 1981-82.

Resources Position

The authorised share capital of an SFC ranges from Rs. 50 lakhs to Rs. 10 crores and is contributed by the State Governments (52 per cent), RBI and IDBI (15 per cent) and others (33 per cent). In order to strengthen the resources of SFCs and to enable them to provide soft loans to industrial concerns, a special class of share capital, contributed by the State Governments and the RBI was created in 1972. Further, a special capital scheme was introduced in 1976 to provide equity assistance to small-scale units. Upto the end of March 1982, a sum of Rs. 8.19 crores was sanctioned under the Special Capital Scheme.

Almost the entire resources of SFCs come from within the country. In 1973, however, a line of credit was sanctioned by the International Development Association (IDA) to the Industrial Development Bank of India (IDBI) for providing refinances to SFCs. The following table shows the sources of funds of SFCs between 1970-71 and 1981-82.

Source : 'Economic Times' dated 24.3.84.

An examination of the sources of funds of SFCs between 1970-71 and 1981-82 shows that IDBI continues to be the single largest source of finance and its share rose from 21.3 per cent in 1970-71 to 35.3 per cent in 1981-82. Further, there was also an increase in the share of paid-up capital from 3.3 per cent to 4.8 per cent during this period. The share of income from other sources, particularly, interest and dividend was also higher with 24.3 per cent in 1981-82 as against 15.8 per cent in 1970-71. Borrowings by way of bonds/debentures formed the second largest source of funds for SFCs. The share of SFCs in such borrowings has come down to 13.8 per cent in 1981-82 from 19 per cent in 1970-71. There was also a fall in the share of deposits accepted, from 4 per cent in 1970-71 to 0.7 per cent in 1981-82. Repayment by borrowers accounted for a smaller share with 16.0 per cent in 1981-82 as against 18.0 per cent in 1970-71. The share of borrowings from the Reserve Bank of India registered a sharp fall from 14.8 per cent in 1970-71 to 3.3 per cent in 1981-82. The overall quota of bond issue by an SFC is determined by RBI after taking into account (*a*) the requirement of Central and State Governments and other government agencies and (*b*) the availability of funds to SFCs from other sources. The bonds are guaranteed by the State Governments as to repayment of principal and payment of interest. They are also the cheapest source of finance and are mostly subscribed by institutional investors such as the LIC and commercial banks. In order to augment their resources, therefore, special development bonds could be floated by SFCs on the lines of debentures floated by the Land Development Banks and Rural Development Bonds issued by the Government. Liberal tax rebates can also be allowed to make these bonds attractive to individual and institutional investors.

SFCs should explore new avenues for augmenting their resources. Leasing is one such field. Commercial banks and private companies have already entered the profitable business of leasing. The SFCs can also examine the opportunities offered by leasing. Additionally, SFCs should offer a package deal to prospective industrialists including credit and consultancy services. Above all, SFCs should investigate into several causes which have resulted in overdues and remedy them so that they can re-cycle their resources.

INDUSTRIAL CREDIT AND INVESTMENT CORPORATION OF INDIA LTD. (ICICI)

The Industrial Credit and Investment Corporation of India was sponsored by a mission from the World Bank for the purpose of developing small and medium industries in the private sector. It was registered in January 1955 under the Indian Companies Act with an authorised capital of Rs. 60 crores. Its issued capital has been subscribed by Indian Banks, Insurance companies, the British Eastern Exchange Banks, other companies both in private and public sectors and the general public in India.

The aim of the ICICI is to stimulate the promotion of new industries, to assist the expansion and modernisation of existing industries and to furnish technical and managerial aid so as to increase production and afford employment opportunities. The Corporation grants long term and medium term loans, participates in equity capital, underwrites new issues of shares and debentures, guarantees loans from other private investment sources and provides managerial, technical and administrative advice. The Corporation has so far assisted industries manufacturing paper, textiles, chemicals and pharmaceuticals, electrical equipment, sugar, electricity, metal ore, lime and cement works, glass manufacture, etc.

The total resources (net of cancellation and repayments) of the ICICI at the end of December 1983 aggregated to Rs. 1574.54 crores comprising Rs. 931.30 crores in rupees and Rs. 643.24 crores in foreign currencies. The rupee resources of the Corporation during 1983 were augmented by two bond issues, the first in February 1983 to the tune of Rs. 55 crores and the second in July 1983 to the tune of Rs. 82.50 crores. The Bonds are guaranteed by the Government of India as regards repayment of principal and payment of interest. To augment its foreign currency resources, the ICICI singed a Syndicated Loan Agreement for US $30 million and DM 45 million (US $50 million) in February 1983. The Corporation had also entered into a Swiss Frame Credit agreement in September 1983 for SF 10 million (Swiss Francs) with a view to utilise the Swiss funds for financing imports from Switzerland. During 1983 the ICICI received an allocation for DM 20 million from the Kreditanstalt fur Wiederaufbau. Funds amounting to £5 million have been allocated to ICICI under the bilateral aid agreement between Government of India and Government of United Kingdom. The Corporation continues to explore newer avenues of obtaining funds for development.

The Industrial Credit and Investment Corporation of India Ltd. have sanctioned till the end of December 1983, a total financial assistance of Rs. 2,640.43 crores comprising Rs. 1120.15 crores in foreign currencies and Rs. 1520.28 crores in rupees including guarantees. The assistance was extended to 1884 enterprises for 3940 projects of which 919 were new companies. Of these enterprises, 365 were set up by new entrepreneurs. The total disbursement for the period amounted to Rs. 1965.96 crores of which, Rs. 915.41 crores were in foreign currencies and Rs. 1050.55 crores in rupees including guarantees.

During 1983 the total sanctions and disbursements were Rs. 462.50 crores and Rs. 384.07 crores respectively as against Rs. 375.85 crores and Rs. 336.61 crores respectively in the previous year. The sanctions were higher by 23.1 per cent and disbursements by 14.1 per cent than those in the preceding year. The increase was largely on account of rupee loans which rose by Rs. 46.19 crores to Rs. 310.82 crores in 1983 and disbursements by Rs. 36.58 crores to Rs. 226.95 crores in 1983. Sanction of foreign currency loans rose by Rs. 40.46 crores to Rs. 151.68 crores in 1983 and disbursements by Rs. 5.1 crores to 109.66.

Notes : Figures for 1982 given in the above table do not tally with figures given in the last Annual Report for the following reasons :

(*a*) All foreign currency figures including those for 1982 have been converted at rates of exchange prevailing on December 31, 1983.

(*b*) Figures of sanctions and disbursements undergo changes because of cancellations from time to time and transfers of amounts from one category to another in the light of factors affecting a project and its means of financing.

State-wise Financial Assistance

A state-wise distribution of the ICICI's direct financial assistance shows that Maharashtra, Gujarat, Tamilnadu and Karnataka claimed 59 per cent of total sanctions of Rs. 2473.09 crores, while the balance 41 per cent were shared among other states. Similar trend is witnessed in the case of disbursements also, with these states, together accounting for 51 per cent of the aggregate disbursements of Rs. 1870.17 crores by the ICICI.

Industry-wise Financial Assistance

The major beneficiaries of the ICICI's assistance were Textiles, Basic Metal Industries, Chemicals and Chemical Products, Machinery (except electrical), Cement, Basic Industrial chemicals (other than fertiliser and pesticides). These industries together constituted 56.3 per cent of the total sanctions and 56.1 per cent of the total amount disbursed by the ICICI.

Financial Assistance to Backward Areas

In order to accelerate the pace of industrialisation in specified backward areas and in 'No Industry' districts, the ICICI along with other financial institutions has widened the scope of the scheme of concessional financial assistance with effect from April 1, 1983. The ceilings for concessional assistance (interest rate of 12.5% per annum and 1.5 per cent commission on underwriting) have been raised to Rs. 5 crore for loans and Rs. 2.5 crore for underwriting assistance to projects in 'No Industry and Special Region' districts. (A category districts). The limits of concessional assistance will be Rs. 3 crore and Rs. 2 crore for loans and Rs. 1.5 crore and Rs. 1 crore for underwriting in the case of B and C category districts respectively. The ICICI's assistance to projects located in backward districts amounted to Rs. 194.95 crores forming 47.5 per cent of the total sanctions. An amount of Rs. 164.92 crores was sanctioned to 118 new companies. Of these companies, 61 were promoted by new entrepreneurs. Modernisation assistance of Rs. 62—65 crore was sanctioned to 70 projects accounting for 15.3 per cent of total direct sanctions. Seventy-five projects for expansion and diversification were sanctioned Rs. 80.62 crores forming 19.6 per cent of the total sanctions.

The Modernisation Scheme has been revised to include all industries. Assistance under the revised scheme will be available for financing modernisation aimed at upgradation process, technology and product, export orientation, import substitution, energy saving and pollution control. Under this scheme, loans up to Rs. 4 crores will be at concessional rate of interest.

Besides the usual form of assistance, the ICICI has commenced leasing operations during 1983. The net lease sanctions during the year amounted to Rs. 13.74 crores to 22 companies. The equipment leased covered a wide range like earth moving equipment, machine tools, storage tanks, computers and certain equipments used in textile industry. The ICICI has also commenced providing guarantees as interim security for privately placed debentures subscribed to by Army Group Insurance Directorate (AGI) pending creation of regular permanent security for these debentures.

INDUSTRIAL RECONSTRUCTION CORPORATION OF INDIA LTD. (IRCI)

In the background of the growing problem of sickness among industrial concerns, the IDBI took initiative in setting up the Industrial Reconstruction Corporation of India Ltd., (IRCI) in 1971, for rehabilitation of industrial units which are closed down or are facing the risk of closure, but deserve to be revived.

Capital Resources

The Corporation's issued and paid-up capital remains unchanged at Rs. 20 crores as on 30th June 1983. The Corporation resorted, to further borrowings by issue of 7½ per -16 years bonds at par for a total sum of Rs. 5.50 crores which are guaranteed by the Central Government as to the repayment of principal and payment of interest. Its total market borrowings after the issue of these bonds amounted to Rs. 32.18 crores. The Central Government granted a loan of Rs. 28 crores during the year, the interest on this is eligible for a subsidy from the Central Government. The total borrowings from the Central Government (inclusive of interest free loan of Rs. 10 crores and after repayment of Rs. 0.25 crores during the year) stood at Rs. 107.25 crores at the end of June 1983.

The IRCI's assistance to sick units for rehabilitation or reconstruction purpose takes various forms viz.,

(i) financial assistance where such assistance is not available from normal financial and banking channels

(ii) technical assistance guidance

(iii) managerial assistance in the fields of administration, finance, marketing, industrial relations etc.

(iv) re-structuring of capital base and liabilities

(v) arrangements for procurement of necessary inputs.

During the year 1982-83, gross sanctions by way of term loans went up by 24 per cent as compared to the previous year, disbursement also went up by 21 per cent. Continued emphasis is being laid by the Corporation on vital aspects of rehabilitation i.e., modernisation of out-dated and old plant and machinery, diversification of their product lines and up-dating of technology. During the year, the Corporation sanctioned about 68 per cent of its total assistance for this purpose, against 58 per cent last year. Apart from assisting units which approached it directly the Corporation continued to extend financial assistance to industrial units in consortium with other financial institutions as a member of the inter-institutional group led by the IDBI. During the year 1982-83, the Corporation extended to 4 State level agencies, the facilities of its line of credit scheme for providing financial assistance to sick small scale units in those States. With these 4 States the total number of States/Union Territories which had been covered under this arrangement went upto 17. The aggregate assistance sanctioned (net of cancellation) by the Corporation stood at Rs. 221.54 crores to 209 industrial units as at the end of June 1983 as compared to Rs. 159.72 crores to 156 units as at the end of June 1982. The total disbursements by way of term loans stood at Rs. 151.43 crores to 153 units till the end of June 1983 as against Rs. 116.90 crores to 122 industrial units as at the end of June 1982. Besides, the Corporation had sanctioned financial assistance of Rs. 0.14 crore under its hire-purchase scheme (primarily for diesel generating sets). As at the end of June 1983, the aggregate sanctions and disbursements by way of hire-purchase assistance stood at Rs. 2.89 crores and Rs. 2.51 crores respectively. For the first time during the year, the Corporation had extended financial assistance under its equipment leasing scheme to various industrial units to facilitate purchase of plant and equipment. Till the end of June 1983, the Corporation had sanctioned Rs. 3.00 crores to 20 units and disbursed Rs. 1.54 crores to 13 of them.

Taking into consideration all types of assistance, the total funds sanctioned by the Corporation aggregated Rs. 68.80 crores during the year under review as against Rs. 53.62 crores in the previous year. Disbursements during the year were Rs. 36.62 crores as compared to Rs. 29.29 crores in the previous year. The total of sanction (net of cancellation) and disbursements stood at Rs. 237.62 crores and Rs. 157.83 crores respectively as at the end of June 1983 as compared to Rs. 170.14 crores and Rs. 120.87 crores respectively as at the end of June 1982.

In addition to direct financial assistance, the Corporaton had also issued guarantees from time to time on behalf of its assisted units. The total outstanding amount of such guarantees stood at Rs. 5.52 crores as at the end of June 1983.

UNIT TRUST OF INDIA (UTI)

The Unit Trust of India was established in 1964 with an initial capital of Rs. 5 crores, subscribed to fully by the Reserve Bank of India, the Life Insurance Corporation of India, the State Bank of India, Scheduled Banks and other Financial Institutions. The general superintendence, direction and management of the affairs and business of the Trust is vested in a Board of Trustees.

The primary objective of the Unit Trust is two-fold : (*a*) to stimulate and pool the savings of the middle and low income groups and (b) to enable the investors to share the benefits and prosperity of the rapidly growing industrialisation in the country. These two-fold objectives will be achieved through a three-fold approach : (i) by selling units of the Trust among as many investors as possible in different parts of the country ; (ii) by investing the sale proceeds of the units and also the initial capital fund in industrial and corporate securities ; and (iii) by paying dividends to those who have bought the units of the Trust.

The performance of the Unit Trust during 1982-83 has been impressive. The sale of units under all the schemes aggregated to Rs. 166.91 crores in 1982-83 as against Rs. 157.37 crores in 1981-82. Repurchases declined to Rs. 15.45 crores from Rs. 27.27 crores in the previous year. The outstanding unit capital rose by Rs. 152 crores to Rs. 707 crores from the last year level of Rs. 555 crores. About 1.42 lakh unit holding accounts were added during the year, taking the total number of unit holding accounts to Rs. 13.65 lakhs as against 12.23 lakhs in the previous year. The Investible Funds at Rs. 870 crores were higher by Rs. 91 crores as compared to the previous year's record of Rs. 679 crores. This constituted yet another record since the inception of the Trust. Both sanctions and disbursement of direct financial assistance were higher, sanctions rising to Rs. 138 crores from Rs. 75 crores and disbursements to Rs. 87 crores from Rs. 64 crores.

Figures in brackets represent assistance to projects in backward areas.

*In the case of undewriting, figures represent actual amounts disbursed/devolved against underwriting commitments.

**Disbursed amount represents actual subscription paid in respect of application, allotment and calls.

£ Disbursements cover issues where trust deeds were executed and debentures allotted as well as advance deposits placed with companies againt Trust's commitment to subscribe to Privately Placed Debentures.

AGRICULTURAL REFINANCE & DEVELOPMENT CORPORATION

ESTABLISHED in 1963. **Directors :** M. Ramakrishnayya (*Chairman*), S. P. Mukerji, S. C. Varma, V. P. Sawhney, Dr. H. B. Shivamaggi, Sampatrao N. Patil, Veershetty Kushnoor, P. C. D. Nambiar, Sant Dass (*Managing Director*). **Head Office :** 'SHRINEKETAN', 'F' Block, Shivsagar Estate, Dr. Annie Besant Road, Worli, Bombay-400 018. **Auditors :** Messrs. Shah & Co.

Objects and Activities : The main objective of the Corporation is to grant medium and long-term credit by way of refinance or otherwise for the development of agricultural and allied sectors. The other objects are (i) to promote institutional building (ii) to reduce regional imbalances in agricultural development and (iii) to improve small farmer coverage through extensive participation in Integrated Rural Development Programmes.

Special Features : The Corporation with its Head Office in Bombay under the charge of the Managing Director has 15 Regional offices and 3 sub-offices located at the state capitals with appropriate powers delegated to them to ensure effective working. The Corporation functions under the overall direction and guidance of the Board of Directors consisting of 9 members. The Deputy Governor of the Reserve Bank of India is the Chairman. Out of the other 8 members, one is nominated by the R.B.I. in addition to the Managing Director who is also appointed by R.B.I., three are nominated by the Government of India and the remaining 3 are elected once in every 4 years from among the three categories of shareholders viz. (i) Commercial Banks (CBs), Insurance and Investment companies (ii) State Land Development Banks (SLBs) and (iii) State Co-operative Banks (SCBs).

The major sources of funds of the Agricultural Refinance & Development Corporation (ARDC) comprises of : (1) the borrowings from (*a*) the Government of India, (*b*) the Reserve Bank of India, (*c*) National Agricultural Credit (Long term operation) Fund, (ii) floatation of bonds in the open market and re-cycling of refinance repayments.

INDUSTRIAL DEVELOPMENT BANK OF INDIA

ESTABLISHED in July 1964 at BOMBAY. **Directors :** N. N. Pai, (*Chairman and Managing Director*), A. Ghosh, S. M. Ghosh, M. Narasimhan, S. S. Mehta, B. B. Singh, T. Tiwari, G S. Patel, P. C. D. Nambiar, B. K. Chatterji, M. V. Subba Rao, L. I. Parija. R. K. Sharma, N. M. Wagle, Dr. F. A. Mehta, Rear Admiral H. D. Kapadia, Hiten Bharya, B. K. Dutt. **Secretary and Chief Accountant :** G. Krishnamurty. **Registered Office :** 'Nariman Bhavan', 227, Vinay K. Shah Marg, Nariman Point, Post Bag No. 10020, Bombay-400 021. Telegrams : 'INDBANKIND'. Telephones : 231012, 233636, Telex : 011-2193. **Auditors :** Messrs. N. M. Raiji & Co.

Objects and Activities : As an apex institution its main object is to provide financial assistance to industrial enterprises both in the public sector and private sector, either directly or through specified financial institutions, there by satisfying the needs of rapid industrialisation and also fulfilling the task of co-ordinating the activities of all agencies concerned with the provision of finance for industrial development. The financial aid is granted to concerns engaged in manufacturing, mining, processing, shipping and other transport industries and hotel industry.

The IDBI direct assistance comprises : (*a*) loans, underwriting/direct subscription to shares and debentures and deferred payment guarantees. (*b*) soft loan assistance for modernisation (*c*) loans under technical development fund scheme for import of small value items of balancing equipment, technical know-how, foreign consultancy services, drawings and designs and (*d*) rehabilitation assistance for sick units. The indirect assistance is provided mainly through the schemes for refinance of industrial loans and re-discounting of machinery bills. The Bank (IDBI) provides resources support to other financial institutions through subscriptions to their share capital and bonds. In addition under the Bank's seed capital scheme, assistance by way of risk capital is given to new entrepreneurs through State Financial Corporations (SFC's) and State Industrial Development Corporations (SIDC's).

INDUSTRIAL RECONSTRUCTION CORPORATION OF INDIA LTD.

(A Public Financial Institution)

INCORPORATED in 1971. **Directors :** T. Tiwari (*Chairman & Managing Director*), K. S. Bhatnagar, D. V. Kapur, R. K. Kaul, H. Bhaya. B. K. Chatterji, B. B. Singh, S. S. Mehta, N. Sankar, B. V. Sonalker, R. Srinivasan, S. D. Khosla, R. P. Goyal. **Registered Office :** 19, Netaji Subhas Road, Calcutta-700 001. **Auditors :** Messrs. Sengupta & Co.

Objects and Activities : This institution was formed with the object of rehabilitating and reconstructing sick industrial units by providing soft loans and supplementing these by guidance and assistance in managerial, technical, marketing and allied fields.

During the year, gross sanctions by way of term loans went up by 24 per cent as compared to the previous year. Disbursement also went up by 21 per cent. Continued emphasis is being laid by the Corporation on vital aspects of rehabilitation i.e. modernisation of out-dated and old plant and machinery, diversification of their product lines and up-dating of technology. During the year the Corporation sanctioned about 68 per cent of its total assistance for this purpose, against 58 per cent last year. Apart from assisting units which approached it direct, the Corporaton continued to extend financial assistance to industrial units alongwith other financial institutions. During the year, the Corporation extended to 4 State level agencies, the facilities of its line of credit scheme for providing financial assistance to sick small scale units in those states.

The aggregate assistance sanctioned net of cancellation, by the Corporation stood at Rs. 221.54 crores to 209 industrial units as at the end of June 1983 as compared to Rs. 159.72 crores to 156 units as at the end of June 1982. The total disbursements by way of term loans stood at Rs. 151.43 crores to 153 units till the end of June 1983 as against Rs. 116.90 crores to 122 industrial units as at the end of June 1982. Besides, the Corporation had sanctioned financial assistance of Rs. 0.14 crores under its hire-purchase scheme (priority for diesel generating sets). As at the end of June 1983, the aggregate sanctions and disbursements by way of hire-purchase assistance stood at Rs. 2.89 crores and 2.51 crores respectively. For the first time during the year, the Corporation had extended financial assistance under its equipment leasing scheme to various industrial units to facilitate purchase of plant and equipment. Till the end of June 1983 the Corporation had sanctioned Rs. 3.00 crores to 20 units and disbursed Rs. 1.54 crores to 13 of them.

Taking into consideration all types of assistance, the total funds sanctioned by the Corporation aggregated Rs. 68.80 crores during the year under review as against Rs. 53.62 crores in the previous year. Disbursements during the year were 36.95 crores as compared to Rs. 29.29 crores in the previous year. The total of sanction (net of cancellation) and disbursements stood at Rs. 237.62 crores and Rs. 157.83 crores respectively as at the end of June 1983 as compared to Rs. 170.14 crores and Rs. 120.87 crores respectively as at the end of June 1982.

In addition to direct financial assistance, the Corporation had also issued guarantees from time to time on behalf of its assisted units. The total outstanding amount of such guarantees stood at Rs. 5.52 crores as at the end of June 1983.

Capital and Resources : The Corporation's issued and paid-up capital remain unchanged at Rs. 20 crores as on 30th June 1983. The Corporation resorted to further borrowings by issue of 7½ per cent—15 years Bonds at par for a total sum of Rs. 5.50 crores which are guaranteed by the Central Government as to the repayment of principal and payment of interest. The Corporation's total market borrowings after issue of these bonds amounted to Rs. 32.18 crores. The Central Government granted a loan of Rs. 28 crores during the year, the interest on this is eligible for a subsidy from the Central Government. The total borrowings from the Central Government (inclusive of initial interest free loan of Rs. 10 crores) as at the end of June 1983 (after repayment of 0.25 crores during the year) stood at Rs. 107.25 crores.

Date of Accounts : 30th June.

(A wholly owned Government of Tamil Nadu undertaking)

INCORPORATED in 1971. **Directors :** C. Ramdas (Chairman), M. A. K. Tayab, C. Ramachandran (Jr.), B. Vijayaraghavan, A. S. Dandekar, A. C. Muthia, A. S. Subbian, R. Saminathan, S. Y. Syed Meeran, V. Selvaraj, K. M. L. Chhabra, A. N. Dyaneswaran (*Managing Director*). **Secretary :** M. Pandy. **Registered Office :** 51-52, Greams Road, Madras-600 006. Post Box No. 4512. Telex : 7736. Telephones : 88261-65. **Auditors :** Messrs. M. S. Krishnaswamy & Co.

Objects and Activities : To promote and develop medium/large scale industries and to develop industrially backward areas of the State with all the necessary infrastructural facilities. The promotional activities are, provision of liberal financial assistance, implementation of the package of incentive as the agent of the State government, development of potential growth centres and provision of developed lands at reasonable cost on easy payment terms and provision of various ancillary services required by industries such as supply of project profiles for feasible projects, recommending applications for letters of intent and industrial licences, assistance in getting approvals under the various regulations.

Location of Industrial Growth Centres : (i) Ranipet (N.A. Dist.) (ii) Hosur (Dharmapuri Dist.) (iii) Manamadurai (Ramnad Dist.) Pudukkottai, Cuddalore (S.A. Dist.) and Gummidipoondi (Chinglepattu Dist.).

CAPITAL : Authorised : Rs. 15,00,00,000 in 15,00,000 Equity shares of Rs. 100 each. **Issued, Subscribed and Paid-up :** Rs. 13,90,00,000 in 13,90,000 Equity shares of Rs. 100 each fully paid.

Date of Accounts : 31st March.

EMCO TRANSFORMERS LTD.

INCORPORATED in BOMBAY as a private company in 1964 and later converted into a Public Limited Company in 1965. **Directors:** I. D. Gandhi (*Chairman*), Ernest Bruetsch, F. A. Favre (*Alternate* to E. Bruetsch), M. R. Shroff, K. N. Shenoy, Ashok Krishnadas, T. S. Sahney, A. D. Gandhi, C. D. Gandhi (*Managing Director*), B.D. Gandhi (*Joint Managing Director*). **Secretary :** B. B. Engineer. **Registered Office :** 9, Swadeshi Mills Compound (*Behind* Prasad Chambers), Near Roxy Cinema, Opera House, Bombay-400 004. **Auditors :** Messrs. Shah & Co.

Objects and Activities: Manufacture of various types of transformers, voltage regulators and capacitors. The Works are at Wagle Industrial Estate and Kalwa Industrial Area, Thane in Maharashtra.

Capacity	*Licensed*	*Installed*
Transformers (KVA)	10,00,000	9,00,000
Voltage regulators (Nos.)	300	300
Paper capacitors (Pcs.)	5,00,000	5,00,000
Power factor capacitors (KVAR)	40,000	40,000

Messrs. BBC Secheron SA, Switzerland, Messrs. Ferranti Ltd., U.K. and Messrs. Ero Starkstrom Kondensatoven GmbH, West Germany are collaborators of the company.

CAPITAL : Authorised : Rs. 75 lakhs in 5,000—11 per cent taxable Cumulative Redeemable Preference shares of Rs. 100 each and 70,000 Equity shares of Rs. 100 each. **Issued :** Rs. 53.37 lakhs in 4495—11 per cent taxable Cumulative

UNIT TRUST OF INDIA

ESTABLISHED in 1964 under the Unit Trust of India Act 1963. **Trustees :** G. S. Patel (*Chairman*), P. S. Gopalakrishnan (*Executive Trustee*), Dr. N. K. Sen Gupta, Satish Ajmera, M. R. B. Punja, D. C. Kothari (*Nominees* of the I.D.B.I.), Dr. P. D. Ojha (R.B.I. *Nominee*), A. S. Gupta (L.I.C. *Nominee*), V. N. Nadkarni (S.B.I. *Nominee*), B. B. Singh, B. Ratnakar (Elected by contributing Institutions). **Registered Office :** No. 13, Sir Vithaldas Thackersery Marg, (New Marine Lines), Bombay-400 020. Telegram : 'UNITSHARE'. Telephone : 256887 (10 lines) and 292799 (*Chairman*), Telex : 011-2365.

Objects and Activities : The basic object is to afford both small and medium investors a means of acquiring a share in the widening prosperity based on steady industrial growth of the country and help channelising savings into productive investment. The Trust is primarily concerned with purchase, sale and re-purchase of units. Besides consolidating the operations of the existing schemes the Trust have introduced two new schemes oriented to different segments of the society viz : Monthly Income Unit Scheme 1983 and Growth and Income Unit Scheme 1983.

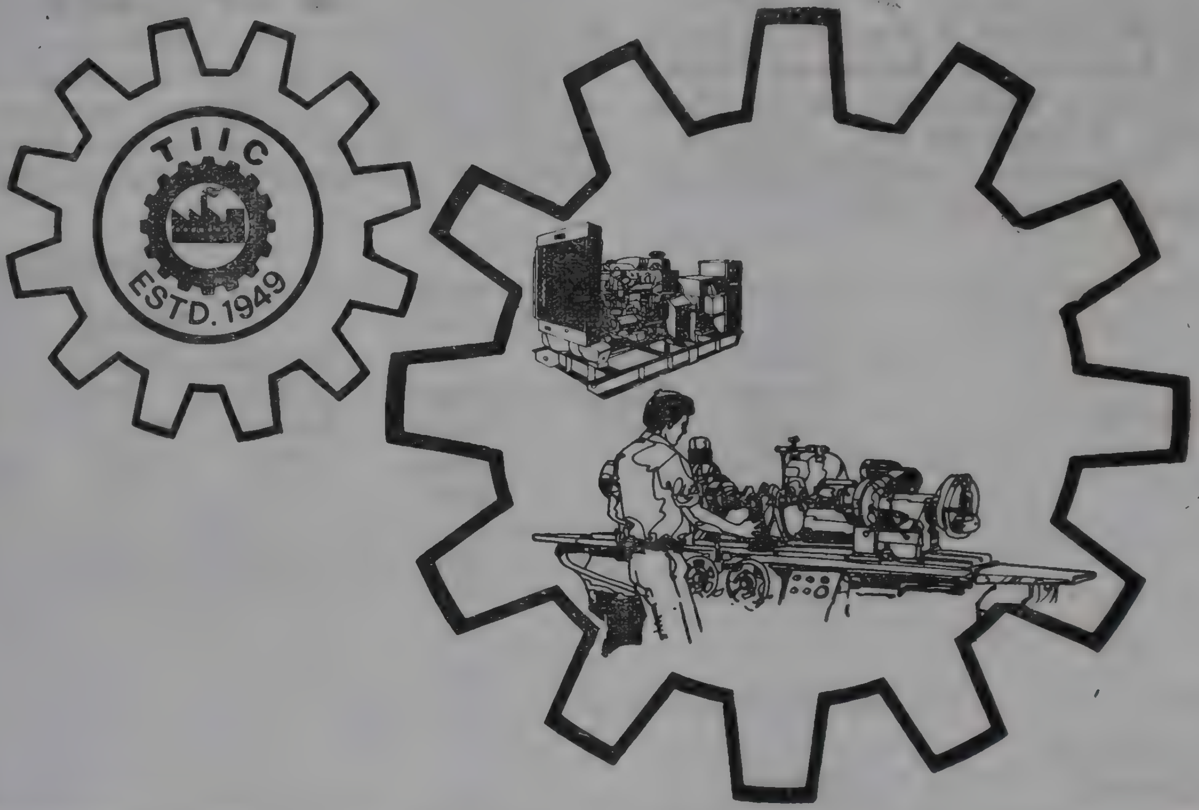
TIIC

FOR INVESTMENT IN INDUSTRY...



TIIC grants Long & Medium Term loans on liberal terms for acquiring fixed assets like land, building, plant and machinery etc. for setting up industries.

Loans are sanctioned for expansion, modernisation and diversification of existing units as well.

Rate of interest is very low - 12.5% per annum to New Small and Medium Industries in backward areas.

Special Scheme for TECHNICIAN ENTREPRENEURS for gainful self-employment and also soft loan/seed capital assistance at 1% rate of interest in deserving cases.

Loans for purchase of power Generators to maintain full production during the power cut.

Modernisation & Rehabilitation Scheme :

Liberal financial assistance is available for modernisation of medium and small scale units for replacement or renovation of plant and machinery or acquisition of balancing equipments for more effective utilisation of installed capacity. Rate of interest is only 11.5% p.a. Assistance is also available for rehabilitation of TIIC assisted SSI units which has been classified as sick for restoring the unit to normal state of health. Usual norms of Debt-equity ratio, promoters contribution margin etc would not be insisted upon. Rate of interest is 10% p.a.

Liberal repayment period and holiday.
Streamlined Service and Speedy Disposal await you at TIIC.

A mature tradition...with fresh, new vision

BANK OF TAMILNAD LTD.
62, East Car Street,
TIRUNELVELI-627 006.

Dear my Friend,

Though this letter seems to be so official, every letter in this letter is very personal.

You may be aware-we have just floated a new and lively scheme, namely "Consumer Recurring Deposit" having you only in mind.

Of course, this scheme ensures a "Three years committed" affinity between us.

Under this scheme you are eligible for an enticing advance to purchase consumer articles, as you like, after a successful completion of 12 monthly instalments.

Further information for you :

- You will be given upto 30 times of monthly instalment as advance.
- You need not repay separately any amount towards loan whereas it is imperative on your part to continue and complete the "Consumer Recurring Deposit" without any break upto 36 months.
- A bonus representing 3 monthly instalments as well as ½% rebate in loan account interest will be an added attraction of this scheme.

Awaiting to see you at any of our branches.

Savingly yours,

BANK OF TAMILNAD LTD. (1903)

Our nearest branch awaits to furnish further details.

NEW PROJECTS OF TIDCO GIVE IMPETUS TO INDUSTRIAL PROGRESS OF TAMILNADU

TIDCO is the crux of the matter when it comes to industrial activity. TIDCO has already successfully implemented 41 projects in the Public/Joint Sector. The total capital outlay of all these projects works out to Rs. 571 crores.

Total employment potential is 15,520 persons.

New Projects under implementation :

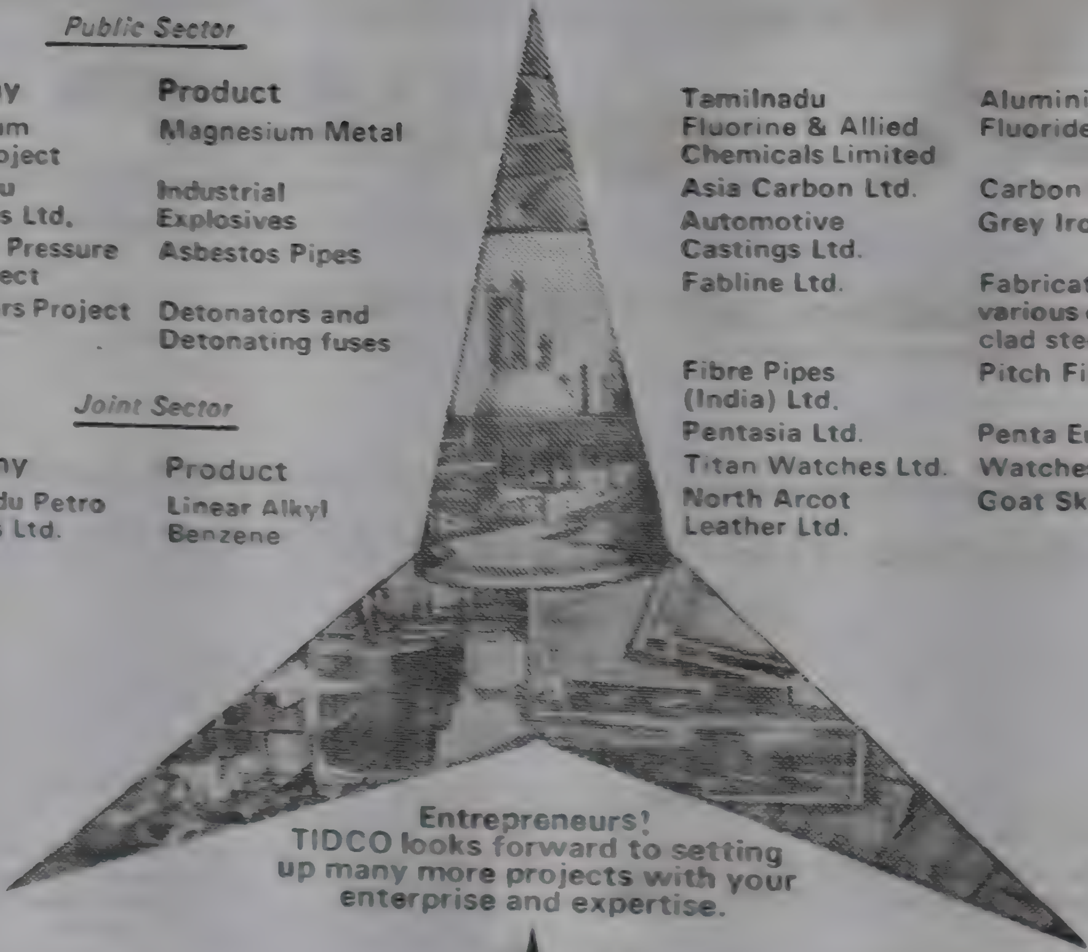
Public Sector

Company	Product
Magnesium Metal Project	Magnesium Metal
Tamilnadu Explosives Ltd.	Industrial Explosives
Asbestos Pressure Pipe Project	Asbestos Pipes
Detonators Project	Detonators and Detonating fuses

Joint Sector

Company	Product
Tamilnadu Petro Products Ltd.	Linear Alkyl Benzene

Tamilnadu Fluorine & Allied Chemicals Limited	Aluminium Fluoride
Asia Carbon Ltd.	Carbon Black
Automotive Castings Ltd.	Grey Iron Castings
Fabline Ltd.	Fabrication of various equipments, clad steel, etc.
Fibre Pipes (India) Ltd.	Pitch Fibre
Pentasia Ltd.	Penta Erithritol
Titan Watches Ltd.	Watches
North Arcot Leather Ltd.	Goat Skin



Entrepreneurs!
TIDCO looks forward to setting up many more projects with your enterprise and expertise.

BUILD WITH RAMCO CEMENTS – BUILD FOREVER

Cement like steel is basic for laying the foundation of a country's economy. To provide more cement Madras Cements Ltd have put through a Rs. 14 crore dry process plant in 1975. This has helped to double the company's production to 1.200 tonnes per day, considerably slash the expenditure on coal and water. You will find Ramco Cements at the foundation of several sturdy homes, multi-storeyed buildings, giant dams, long bridges, concrete roads, major irrigation projects and industrial estates.

CEMENT INDUSTRY

TO every developmental effort, from the construction of a small factory to the building of mammoth multi-purpose projects, cement constitutes a basic ingredient. It is therefore ranked rightly as a basic industry. However, cement industry in India had been the classic example of how industries with administered prices in a state of continuous inflation would suffer from the perennial problem of escalating costs running far ahead of the pre-fixed prices. While its crucial importance had necessitated a policy of careful government regulation, the very recognition so accorded had sparked off a chain reaction of unrealistic prices resulting in inadequate returns. This, in turn, had given rise to insufficient internal generation as well as low degree of capital inflow, thus hindering the industry's path of expansion. The following pages trace the development of this industry amidst these problems, its present state of functioning and also attempt to present an insight into the emerging future picture.

Cement was produced for the first time in India in 1904 by South India Industries Ltd., Madras. This unit which had an installed capacity of 30 tpd, was based on lime from sea shell and became defunct very soon. By 1913, however, three units started their operations with a combined installed capacity of 75000 tpa. In 1914, indigenous production fell far short of domestic demand necessitating an import of 165,723 tonnes. Shipment difficulties and foreign trade restrictions during the First World War years acted as incentives to the development of indigenous industry and by 1924 the total installed capacity grew to 559,800 tpa. The capacity utilisation rate, however remained unsatisfactory partly due to large scale imports, cut-throat competition and the resultant price decline in the post-war years and some companies even had to face liquidation. The Government referred the problems of the industry to the Tariff Board, which recommended tariff protection. About this time, the Cement Manufacturers' Association and the Cement Marketing Co. of India came into being with the chief objective of popularising indigenous cement and co-ordinating the marketing and pricing functions of cement.

In 1936, all the then existing cement companies with the exception of Sone Valley Portland Cement Co. Ltd. merged to form the Associated Cement Companies Ltd. This move facilitated cost reduction as well as uniformity in quality. By 1947, the installed capacity of the industry rose to 2.2. million tpa.

After partition, five of the cement poducing units in the country went to Pakistan and the total installed capacity of the eighteen units that remained in India was 1.5 million tpa. This increased to 3.28 million tpa. by 1950-51. The growth in installed capacity and production is tabulated below :

TABLE 1

Capacity and Production of Cement in India

Year (1)		Installed Capacity (in million tonnes) (2)	Production (in million tonnes) (3)	Capacity utilisation Percentage (4)
1950-51	..	3.28	2.95	90

1981-82	..	26.29	21.07	72
1982-83	..	35.79*	27.00**	64
1983-84	..	44.34*	32.50**	77

* Estimates,

In the three decades between 1950-80, expansion of capacity has been between 7-8 million tonnes per decade, which is a far-from-impressive rate for a basic industry in a fast developing economy. At the beginning of the Sixth Plan, however, Government approved 33 million tonnes of additional capacity and about two-thirds of this was expected to materialize during the Sixth Plan period. Happily, targets set in respect of additional capacity generation have been realised. With the impetus given by the partial decontrol announced in 1982, several units took up projects for expansion of capacity and modernization both of which contributed towards increased production.

Demand and Supply Position

In the year 1980, the country's cement manufacturing units produced 17.60 million tonnes of cement at a very low utilisation rate of 73 per cent. Demand for cement in that year was 28 million tonnes which meant that it exceeded supply by about 60 per cent. Cement production figures in the years 1980-81, 1981-82, 1982-83 and 1983-84 are given as 18.56, 21.07, 27 and 32.5 million tonnes against the country's requirements of 27.99, 30.23, 32.65 and 35.26 million tonnes respectively. Thus in the post-independence history of the cement industry, supply has always been unsuccessfully chasing demand. Despite quotas and distribution controls, the supply-demand equilibrium could be achieved only at a much higher price due to large unsatisfied demand at the official price. Thus cement was commanding a very high premium in unofficial markets. The situation thus was very serious, with market scarcity despite growing demand, and price escalation despite official price regulation. This was doubly unfortunate since, on the one hand, manufacturing units were starved of legitimate funds for expansion, on the other hand, consumers had to pay exorbitant prices—the unofficial premium being absorbed by middlemen and traders. The black money so generated added to the inflationary pressures in the economy and the clandestine deals meant loss of revenue to the Government.

As per provisional estimates, between April 1, 1980 (beginning of Sixth Plan) and the end of 1983-84, total installed capacity in the country went up from 24.29 million tonnes to 44.34 million tonnes. The year 1983-84 has thus witnessed an additional generating capacity of over 7 million tonnes, against 3.4 million tonnes created during the previous year. Utilisation of capacity increased from 72 per cent in 1981-82 to 81.6 per cent in 1983-84. Capacity utilisation in 12 out of the 72 units in the country has exceeded 100 per cent with Rassi Cement of Andhra Pradesh topping the list at 155 per cent and Shree Digvijay Cement Company in Ahmedabad closely following at 136 per cent. There are a dozen other units with capacity utilisation ranging between 101 per cent to 119 per cent.

Imports of cement amounted to 2.34 million tonnes in 1983-84 against 1.54 million tonnes in 1982-83. Cement is, therefore, expected to be one of the few industries which are certain to achieve the capacity installation target set for the Sixth Plan. In all likelihood, against the targeted plan capacity of 43 million tonnes, the cement industry will commission an additional one million tonne capacity by March 1985, eventhough output will only be about 32.5 million tonnes as against the anticipated demand of 38.1 million tonnes. Since 1982, some of the existing cement companies have been going in for rapid expansion of capacities, and quite a few non-cement-making enterprises have diversified into cement manufacture. Production of Cement is increasing every year. Production for 1983-84 was around 32-33 million tonnes against 27 million tonnes the previous year. Many companies have launched on schemes for modernisation and rehabilitation of old plants, including the switching over from the wet process to the more energy-efficient dry process. A hunt for better foreign technology is also on in this connection. Productive energy released as a result of partial decontrol in 1982 has enabled the industry to invest about Rs. 500 crores on modernisation and expansion. On the threshold of the Seventh Plan, the industry hopes to invest around Rs. 2500 crores to fix a tentative target of 62 million tonnes of capacity to produce about 49 million tonnes of cement.

The persistent power problems have necessitated the installation of diesel generating sets. Presently, the industry is in a position to generate 25 per cent of the power it needs. Also, a line of credit is available from the World Bank for cement units which propose to modernize the manufacturing process. If the present condition of inadequate returns in the industry persists, not many units will be inclined to seek World Bank Credit. The capacity of the industry has no doubt expanded at an encouraging rate, but the rate of utilisation of installed capacity which was around 90 per cent a few years ago, is now around 80 per cent, which is well below the minimum desirable rate of 85 per cent. This utilisation rate of 85 per cent would enable us to dispense with imports of cement. The principal factor that hampers the stepping up of capacity utilisation is the dismal power situation in some of the cement producing states. Since there are no hopes of a marked improvement in the power situation in the near future, the Government should offer better incentives to cement units for installing generators. The country plans to achieve a cement manufacturing capacity of 75 million tonnes by 1995. Considering the present per capita consumption of cement in India, which is just about one-twelfth of the developed world, the target is not ambitious.

TABLE 2

Cement Industry in India : Targets and Achievements (in million tonnes)

Period	Capacity			Production		
	Target	*Achievement.	*Shortfall (%)	Target	*Achievement.	*Shortfall (%)
1951-56	5.31	5.02	6	4.80	4.80	4
1956-61	16.00	9.30	42	13.00	9.97	39
1961-66	15.00	12.00	20	13.00	10.82	17
1969-74	..	..	..	18.00	14.66	19
1974-79	23.50	22.56	4	20.80	19.42	7
1980-85	43.00	44.00	Surplus 2.3	..	..	..

*End year figures.

Pricing Policy

The price of cement was first determined by the Government in August 1942 on 'cost-plus' basis. The prices thereafter were fixed basically upon the recommendations of the Tariff Commission after their successive enquiries held in 1953, 1958, 1961, 1974 and 1978. Broadly, the Tariff Commission had recommended differential ex-works prices based on individual cost of the units. Adopting the basis of capital employed, the Commission recommended differential returns for low, medium and high cost units, besides a rehabilitation allowance for older plants in 1958. In 1961, the Commission suggested ten differential retention prices based on a uniform 14 per cent return on capital employed. The Government, however, switched over to a uniform retention price for all units subject to certain allowances. Price escalation clause for cost of coal and power was provided, and prices were revised from time to time in response to cost escalations. In 1974, the Government retained the uniform retention price but rejected the rehabilitation allowance as also the creation of the Revolving Fund for establishing new plants with 9 million tonnes capacity. The price so fixed was uneconomic. The implementation of the escalation clause was tardy; the increase in retention price granted after much delay was also inadequate. All these dealt a blow to the finances of the cement manufacturing companies. In December 1978, the High Level Committee of Lavraj Kumar appointed by the Government recommended a new price structure based on costs prevailing at that time. The Government introduced a 3-tier price structure for low, medium and high cost units and a special price for new undertakings and substantial expansions. These prices were recommended on the basis of 85 per cent capacity utilisation, various cost elements and a 12 per cent post-tax return on networth. The prices were announced after a delay of 10 months, ignoring the cost escalation in the intermittent period. Prices were to be reviewed annually, though the recommendation was for a quarterly review.

Partial Decontrol—A Landmark

In 1982, the Union Government made a policy change, which is widely regarded as a turning point in the industry's fortunes. The Finance Minister announced a scheme of 'levy' and 'free' cement with a dual pricing policy. Accordingly, the levy prices are administered by the Government through the public distribution network, while the free component, (which at that time was fixed at one-third of production) could be marketed by the companies through their own channels at open market prices.

The arrangement is that consumer needs in the general category in deficit states are to be met through imports. This would increase availability in the producing states where black marketing has been rampant.

In July 1984, the Union Government announced an increase of Rs. 40 a tonne in the retention price of cement and also a reduction in the levy quota to release an additional 1.4 million tonnes at open market prices. The retention price of Puzzolana Cement was fixed at Rs. 360 and that of Portland Cement at Rs. 375 a tonne. The hike was around Rs. 2 per bag of levy cement. At the same time the levy quota was reduced from 66.6 per cent to 65 per cent in the case of units which were in commercial production on Jan. 1, 1982 and from 50 per cent to 45 per cent in the case of units which commenced production after that date, and those units which are designated as sick units.

The retention price of levy cement, fixed on Feb. 28, 1982 in the wake of the introduction of partial decontrol, was not revised thereafter until July, 1984. The increase in prices of various inputs such as coal, power, freight and wages had resulted in a cost escalation that hampered the modernization programme based on cost and energy efficient technology, initiated by the companies. Though the Bureau of Industrial Costs and Prices had recommended a formula for escalation in price of levy cement by relating to selected factors such as coal and power, no such formula was sanctioned by the Government until the *ad hoc* price hike was announced. Thus, during this intervening period, the industry had to sell levy cement at 'below-cost' price in several areas. The introduction of partial decontrol ushered in a phase of upswing and the industry seemed poised for to achieve its modernization plans. However, the absence of a built-in provision for cost escalation in the retention prices resulted in a steep decline in earnings, leaving no scope for internal generation. This paucity of resources adversely affected the modernisation plans of the cement companies. The hike announced in July 1984 was, therefore, described as inadequate by industry circles. Another development is the widening magnitude of cross subsidy between the private and public consumers. This lacuna needs to be corrected along with the introduction of a formula instead of ad hocism in the matter of pricing.

Distribution System

Distribution of cement was entirely Government controlled until 1982. At present, the levy quota is to be sold compulsorily to the Government though not on a day-to-day or monthly basis. The rest of the output, or free-sale quota, may be sold in the open market at market-evolved prices. The output lifted by the Government is allocated statewise. The states are asked to furnish their requirements to the Cement Controller, who, after studying the pattern of requirements vis-a-vis availability, allocates accordingly. The requirements of the State Governments are sanctioned directly under the reserved category.

Technology

Cement may be manufactured employing 3 alternative technologies : (a) the largely outmoded wet process technology, (b) the more modern dry process that requires only 19 per cent coal utilisation (as against 30 per cent for the wet process) and (c) the latest Precalcinator technology through which optimum power utilisation may be achieved. Here the calcination of raw materials is partly or completely carried out before the feed enters the rotary kiln, thus reducing the thermal load on the kiln. Precalciners can be fitted on to existing dry process kilns. Besides saving power, the adoption of this technology enables an increase in installed capacity by 30-50 per cent. The 3,000 tonnes per day plants being set up in the country use this technology.

Kilns based on wet process technology account for around 60-65 per cent of capacity but produce only about 50 per cent of the total cement manufactured. Many of these have virtually completed their useful lives. Statistics reveal that 30 of the existing cement units in India have been established more than 20 years ago and technical evaluation studies lay down that cement plants should start systematic rehabilitation after 10 years of operation. Thus modernisation and rehabilitation-conversion of wet to dry process and addition of precalciners to extisting dry process units are long overdue in this country.

Mini Cement Plants

The idea of mini cement plants, i.e. those with a daily capacity of less than 200 tonnes, has been advocated due to the following reasons : (1) To utilise limestone deposits which are too small to call for the setting up of a large plant ; (2) the gestation period in commissioning these units is just about half of that of larger units ; (3) the infrastructural requirements of the mini cement plants are much less ; (4) the cement produced may be locally distributed thus easing the complicated distribution problem ; and (5) there is an inherent rural development and employment potential in these plants, the setting up of which would promote the development of limestone bearing areas with easy availability of cement.

The mini cement plants can adopt vertical shaft kiln technology which has been indigenously developed and which is found economically viable by the Cement Research Institute. The small rotary kiln technology which is a scaled down version of the one used in larger plants is also found suitable. Two other processes viz. the Lurgi Sinter bed and mechanical grill have also been recommended.

Two working groups were constituted in the Department of Industry to study the technological and financial aspects of setting up such mini cement plants. The recommendations were to set up at least two plants each in the north-eastern and northern states and in other states where there were no large plants and to create a special wing in the Cement Corporation of India to deal with mini plants on a priority basis.

The Government of India offers various incentives for putting up mini plants. It was decided early in 1979 to grant a 50 per cent excise duty rebate for five years for new units unassociated with bigger cement plants. Also ex-works price was fixed at Rs. 296 a tonne, the, same as for new bigger units. Additional incentives are also available for plants located in remote and inaccessible places or hilly terrain. Major consultancy firms such as the Associated Cement Company and the FACT Engineering and Design Organisation offer technology for mini cement plants on a turnkey basis.

It is envisaged that while the mini plants can help in taking cement to the limestone-bearing areas, larger units at the railheads can cater to non-limestone areas and the ports for export, and play complementary roles in the production and distribution of cement in India.

In 1984, however, the Government announced a withdrawal of excise duty reliefs. In the small-scale sector there are five 'tiny' plants operating and six are under installation ; 28 more plants are in the pipeline. All these small sector plants are based on vertical shaft kiln (VSK) technology which, since its introduction in 1981, has won international approval. This technology which is also suited to split-location points is very fuel and power-efficient, while the small scale plants need 85 units of power per tonne, the medium and large units need 120 units. The employment generated by these units is in the range of 4-5 persons per tonne whereas the corresponding figures for large and medium units are 0.2-0.3 and 0.5-1 respectively. Each such mini plant is capable of producing 20 to 25 tonnes per day, which would work out to an annual output of around 60,000 tonnes. It is expected that 100 such plants would be in operation within the next five years and the 'mini' sector would account for about 6 lakh tonnes of cement at that time, depending upon the improvement in technology likely to be achieved by then.

Split Location Plants

Another interesting idea that came up in recent times was that of split location plants, on which a policy decision was taken in April 1979. Under this arrangement clinker would be produced in one location while grinding will be done in another. This is to ease the transport of manufactured cement from the factory to the consumer and reduce the demand on closed wagons. The idea is yet to find large scale application.

Problems

The main impediments to the growth of cement industry in India may be broadly listed thus : Infrastructural crisis, acute power shortage, transport bottlenecks including shortage of wagons for transporting, non-availability of good quality coal, technological obsolescence, inadequate scales of economy, frequent price controls etc.

Infrastructural crisis

Coal is not a fuel, but a vital raw material to the cement industry. Precarious coal supply position has resulted in near, or at times total, closure of several cement units. The coal requirements of cement factories are generally linked to the nearest coal fields as far as possible. After steel, power and the railways, the cement industry is the fourth largest consumer of coal in the country, consuming roughly 6-7 million tonnes of coal per annum. Shortloading at the collieries, pilferage, transit losses and shortage of wagons have been the major constraints on the procurement of coal. The units in the far flung regions have been the worst affected due to this. Units often complain of low grade coal with high moisture and ash content thereby causing operational problems, increased coal consumption and low capacity utilisation.

Frequent interruptions to power supply, low voltage conditions, load sheddings, cuts, etc. in a highly power-intensive industry such as cement could be crippling. Worst conditions prevail in the states of Gujarat, Bihar, Karnataka, Tamil Nadu, Rajasthan and Madhya Pradesh which together account for two-thirds of the total cement capacity in the country. During the year 1982 alone, production losses were reported to be around 2 million tonnes. The industry consumes around 6% of the total power generated in the country. The situation is further complicated by the fact that due to technical reasons and the adoption of the obsolete wet process, power consumption in Indian plants is 15-20 per cent higher than those abroad.

The wet process of cement production, hitherto predominantly adopted in the country is highly power-intensive but low on productive efficiency. Technological obsolescence is considered the most crucial inhibitative factor to the development of the Indian cement industry. Nearly three-fourths of the wet process-based kilns in the country are more than 20 years old. Only recently precalcination technology was allowed to be imported ; this technology would enable utilisation of low grade coal with even 50 per cent ash content. Modernization efforts through introduction of the dry process are underway in several plants, but unfortunately the programmes have been suffering delays due to the paucity of resources, as discussed earlier.

Out of the kilns operating at present, more than 95 per cent have a capacity below 1200 tpd, which though viable during the 'sixties and early 'seventies are ill-suited to the techno-economic conditions prevalent today. An interesting revelation in the context emerges from the study made by the Economic and Scientific Research Foundation, which says that a single cement plant producing 3200 tpd. would be 46 per cent less capital-intensive than eight plants of 400 tpd. capacity. Thus the size of the Indian cement plant does not afford it adequate scales of economy.

Export of Cement

India is the eleventh largest producer of cement in the world. The country has been exporting cement till 1976-77, though moderately. However, in the year 1977-78, domestic conditions necessitated importing and around 13 lakh tonnes were imported. At present, exports have been banned except to Bhutan and Nepal. So far India has been unable to re-enter the overseas market. It may be mentioned that Indian cement is still price-competitive and exporting has stopped mainly due to domestic demand pressures.

TABLE 3

Per Capita Consumption of Cement in India

Year	Production (million tonnes)	Export (million tonnes)	Import (million tonnes)	Apparent consumption (million tonnes)	Population (millions)	Per capita consumption (tonnes)
1972-73	15.55	0.20	..	15.35	560	27
1973-74	14.66	0.12	..	14.54	572	25

Local Consumption

Per capita consumption of cement in India is one of the lowest in the world, despite the fact that India is one of the top cement producing nations in the world. Possibly, the main reason for this is our high population. Perhaps, per capita consumption would have been higher had the commodity been available sufficiently at reasonable prices.

During the period 1972-83, per capita consumption of cement increased only by 2.3 per cent per annum. The figure showed a slight improvement after cement began to be imported. Total consumption registered a growth rate of 4.8 per cent during the same period whereas production grew at the rate of 4 per cent per annum.

Research & Development

Research and Development work in the field of cement technology is being carried on by the Cement Research Institute, several universities and also by various organisations in public and private sectors. The gamut of their activities, includes use of industrial waste such as flyash, puzzolona in the manufacture of cement, productivity enhancement programmes, development of mini cement plant technology and a host of other programmes.

The I.I.T. Kanpur and the Regional Research Institute, Jorhat had developed a technology for the manufacture of cement from paddy husk. Already a factory in Shimoga, Karnataka has been making successful application of this technology to produce cement. The States of Uttar Pradesh, Punjab and Haryana are taking speedy action to establish similar plants. The cement from paddy husk may be utilised for any construction work but not heavy duty use.

A cement Research Account has been set up by the Committee of Director of Cement Research, with the Cement Research Institute as the Secretariat of the Committee. This Account has about Rs. 100 lakhs coming mainly from the provision of 50 p. per tonne in the cement retention price. However, the funds have not been allocated on any systematic basis so far and a substantial part remains unutilised. It may be said that cement research in the country requires a new direction, proper guidance and a fresh and comprehensive programme.

Conclusion

In conclusion, it can be said without any fear of contradiction, that the cement industry has shown remarkable growth prospects in the aftermath of the realistic policy adopted by the Government. Self-sufficiency in the availability of cement is in sight. The projected capacity increase and its progressive utilisation indicate that in a couple of years the domestic demand for cement will be fully met by indigenous production, eliminating imports altogether. Eventhough there is still a 15 per cent gap between supply and demand which is likely to persist till 1984-85, the increased output has reduced the need for imports at the rate of 2 million tonnes of cement per year. It is expected that price stability also can be easily ensured for the commodity as a result of the increasing balance between supply and demand pattern. Moreover, the region-wise balancing of demand and supply, in the wake of the erstwhile cement-starved South producing enough cement to match its demand, has made the Government think in terms of phasing out of the freight equalisation for cement as a straw in the wind indicating complete decontrol round the corner. This will logically lead to a stage where only efficient units will thrive. Self-sufficiency in future will throw up challenges to the producers on the quality and packaging of cement both of which were sacrificed at the altar of a sellers' market.

ANDHRA CEMENT CO. LTD.

ESTABLISHED in 1937 at VISHAKAPATNAM. **Directors :** Dr. Bharat Ram (*Chairman*), M. P. Jain (*Managing Director*), S. N. Desai, Kamaljit Singh, K. R. Poddar, P. R. Krishnamoorthy, K. M. Kishin Chandani (IDBI *Nominee*), Vinod Narain, R. K. Seshadri (IFC *Nominee*), V. Balakrishnan and S. V. Maheswari. **Registered Office :** Chandralok, No. 111, Sarojinidevi Road, Secunderabad-500 003. Telephones : 821601, 821667, 821502, Vijayawada. Telex : 0155-630. **Auditors :** M/s. Brahmayya & Co.

Objects and Activities : Manufacture of cement, sponge iron, pig iron, steel and allied products. The Company has working units at Vijayawada, Porupalem and Srinagar (A.P.).

Licensed/Installed Capacity : 4,90,000 MT of cement p.a.

Letters of intent have been received for an expansion programme at Durgapuram (Nadikude) for the installation of a plant to manufacture 4 lakh tonnes of Clinker and 2.5 lakh tonnes of cement per annum.

CAPITAL : Authorised : Rs. 10,00,00,000 in 2,500—6% tax free Cumulative first Preference shares of Rs. 100 each ; 2,50,000—7% tax free Cumulative Second Preference shares of Rs. 10 each ; 1,72,500—11% Cumulative Redeemable Third Preference shares of Rs. 100 each and 80,00,000 Equity shares of Rs. 10 each. **Subscribed:** Rs. 5,50,97,835 in 2,488—6% tax-free Cumulative First Preference shares of Rs. 100 each fully paid, 62,45,833 Equity shares of Rs. 10 each fully paid-up, and forfeited shares of value Rs. 37,610, *Less* allotment money to be received Rs. 76,46,905.

Date of Accounts : 31st March. **Transfer, Sub-division** or **New Certificate Fee :** *Nil.*

Dividend declared : 1982—12.5%, 1981—12.5%, 1980—12.5%, 1979—12.5%.

A.R.C. CEMENT LTD.

INCORPORATED in 1978. **Directors :** A. R. Chadha, P. N. Khanna, Kamlesh Sawhney, Sadhana Chadha, K. P. Taimni, S. C. Tripathi, T. R. Tuli, C. M. Chadha and A. H. Mahmood. **Secretary :** R. K. Gupta. **Registered Office :** Atma Ram House, C-37, Cannaught Place, New Delhi-110 001. Telephone : 352318. Telex : ARCO 3304, New Delhi. Telegrams : 'ARCSUPLYOR'. **Administrative Office :** Archna Theatre Building, Greater Kailash Part I, New Delhi-110 048. Telephone : 643466. **Auditors :** M/s. D. P. Khosla & Co.

Objects and Activities : Manufacture of Portland cement. The factory is at Gunialgaon near Dehradun in the state of Uttar Pradesh.

Licensed/Installed Capacity : 60,000 tonnes per annum.

CAPITAL : Authorised : Rs. 1,60,00,000 in 15,00,000 Equity shares of Rs. 10 each and 10,000 Preference shares of Rs. 100 each. **Paid-up :** Rs. 1,50,00,000 in 15,00,000 Equity shares of Rs. 10 each.

Date of Accounts : 31st December.

ASHOKA CEMENT CO. LTD.

ESTABLISHED in 1954. **Directors** : K. P. Khaitan, A. K. Gutgutia, M. P. Jain, A. R. Saraogi, A. Gowrisankar and Dr. S. Chakraborty. **Secretary :** J. S Gupta. **Registered Office :** Dalmianagar (Bihar). Telephones : DLM 428, 517 and 426. **Central Office :** 8, Camac Street, 13th Floor, Calcutta-700 001. Telegrams : 'STEEL'. **Auditors :** M/s. Lodha & Co.

Objects and Activities : Manufacture of cement. The factory is at Dalmianagar, Bihar, with a kiln capacity of 775-850 tonnes of cement per day. The Company also has a steel foundry at Dalmianagar with a rated capacity of 10,000 tonnes of steel castings and ingots per year.

CAPITAL : Authorised : Rs. 2,50,00,000 in 50,000 Preference shares of Rs. 100 each and 20,00,000 Equity shares of Rs. 10 each. **Subscribed :** Rs. 59,90,843 in 6,00,000 Equity shares of Rs. 10 each fully paid-up and amount paid-up on forfeited shares Rs. 3,053, *less* shares forfeited : Rs. 12,210.

Date of Accounts : 31st March. **Transfer Fee :** *Nil.* **Sub-division** or **New Certificate Fee :** Re. 1.

THE ASSOCIATED CEMENT COMPANIES LTD.

FOUNDED in 1936 at BOMBAY. **Directors :** N. A. Palkhivala (*Chairman*), P. S. Mistry (*Deputy Chairman*), M. A. Wadud Khan (*Vice-Chairman and Managing Director*), S. Moolgaokar, S. R. Vakil, Dr. N. L. Hingorani, P. K. Mistry, P. S. Gopalakrishnan, J. P. Munsiff, H. T. Parekh, Harish Mahindra, G. K. Raju, B. N. Reporter (*Joint Managing Director*), and O. V. Kuruvilla (*Nominee Director*).

Whole-time Directors : P. N. Bam, P. J. Jagus, and T. V. Balan. **Special Directors :** Y. V. Rami Reddi, Manish Bahl, R. L. Misra, and V. P. Hebbal. **Registered Office :** Cement House, 121, Maharshi Karve Road, Bombay-400 020. Telegrams: ACCPURCHEZ, ACCADMIN, ACCGEOLOGY, ACCPERSNAL, ACCFINACS, ACCFABRIK, ACCEXECUTE, ACCAGENCY, ACCMING, ACCIDATA, ACCVICKBAB, CEMENT, CONCRETE, ACCRESEARCH and CEMPUB. Telephone : 299122 (30 lines).

Share Department : Merchant Chamber, 41. Sir Vithaldas Thackersey Marg, Bombay-400 020. **Auditors :** M/s. A. F. Ferguson & Co. and M/s. K. S. Aiyar & Co.

Objects and Activities : Manufacture of cement, high alumina firebricks, refractory mortars, Babcock boiler plant cement mining and other machinery including structural and mild fabrications. The Company also offers consultancy services in respect of design and drawings for construction of cement plants, refractory linings and technical know-how in prospecting work. The company has also entered recently the field of chemical engineering as process consultant and secured orders as well as turnkey contracts. The company has also undertaken a projects for the manufacture of Catalysts and Absorbent (CATAD) at Thana. A Central Research Station is at Thana.

Capacity	*Licensed*	*Installed*
Grey Cement (lakh tonnes)	93.30	79.23
White Cement, etc. (lakh tonnes)	0.60	0.55
Refractory and Refractory products (lakh tonnes)	0.40	0.40
Catalysts and Absorbents (tonnes)	1,800	1,000
Refractories and Refractory products (CATAD) (tonnes)	1,450	1,080

The company owns 17 cement factories spread over the states of Rajasthan, Gujarat, Maharashtra, Madhya Pradesh, Haryana, Andhra Pradesh, Karnataka, Tamil Nadu, Himachal Pradesh and Bihar. The refractory plant is at Katni in Madhya Pradesh. A slag granulation plant is being operated at Tatanagar in Bihar and a heavy engineering works at Shahabad in Karnataka, besides a plant producing special products at Porbandar.

Installation of additional capacity of 10 lakh tonnes per annum at Wadi in Karnataka and 5.6 lakh tonnes per annum in a new location at Gagal in Himachal Pradesh are underway. The company also proposes to expand the capacity of the white cement plant at Kymore from 0.25 to 0.75 lakh tonnes per annum. Plans have been drawn up for modernisation and expansion including conversion of some of the works from wet to dry process.

The company has secured a three year contract for the management, maintenance and operation of one million tpa. Cement plant of Yanbu Cement Co. Ltd. in Saudi Arabia. A second similar contract has been secured at Kubaisa in Iraq.

CAPITAL : Authorised : Rs. 75,00,00,000 in 65,00,000 Equity shares of Rs. 100 each and 10,00,000 Unclassified shares of Rs. 100 each. **Issued :** Rs. 33,25,12,100 in 33,25,121 Equity shares of Rs. 100 each. **Subscribed :** Rs. 33,23,11,700 in 6,07,264 Equity shares of Rs. 100 each, issued as fully paid for consideration other than cash pursuant to contracts, 15,63,588 Equity shares of Rs. 100 each issued for payment in cash and 11,52,265 Equity shares of Rs. 100 each issued by way of Bonus shares.

In 1970-80, 4,74,731 Bonus shares were issued in the proportion 1 : 6.

Date of Accounts : 31st July. **Transfer Fee :** *Nil*. **New Certificate Fee :** Re. 1. **Dividend declared :** 1983—20%, 1982—16%, 1981—10%, 1980—10%. ACC-Babcock Ltd., Cement Marketing Co. of India Ltd. and Associated Tyre Machinary Co. Ltd. are subsidiary companies. Babcock & Wilcox of India Ltd. is a subsidiary of ACC-Babcock Ltd.

Subramania Iyer & Co. ; M/s. Brahmayya & Co.

Objects and Activities : Manufacture of cement, casting materials, grinding media, linear plates etc. There are two units producing cement at Sankarnagar and Sankaridurg in Tamil Nadu and a foundry at Nandambakkam, Madras.

	Cement Division	*Foundry Division*
	(tonnes per annum)	
Licensed Capacity ..	15,13,000	4,600
Installed Capacity ..	15,13,000	5,280

A programme of modernisation is underway. Long term measures including possibilities of installation of a single dry process kiln with a capacity of 3000 tonnes per day, in place of five existing wet process kilns is under active consideration. The company is also exploring areas of diversification and may venture into coastal shipping, in view of its own need for coal movement.

CAPITAL : Authorised : Rs. 10,00,00,000 divided into (i) 1,25,000—7½% (*Less* Indian Income Tax) Cumulative Preference shares of Rs. 100 each, and (ii) 1,75,000 Equity shares of Rs. 5 each. **Issued :** Rs. 5,23,50,000 in (i) 33,500—7½% (*Less* Indian Income Tax) Cumulative Preference shares of Rs. 100 each and (ii) 98,00,000 Equity shares of Rs. 5 each. **Subscribed :** Rs. 5,23,35,000 in (i) 33,350—7½% (*Less* Indian Income Tax) Cumulative Preference shares of Rs. 100 each ; and (ii) 98,00,000 Equity shares of Rs. 5 each fully called-up.

In 1969, 28,00,000 Equity shares of Rs. 5 each were issued to holders as on 12th August 1969 as bonus @ 2 : 5.

Date of Accounts : 31st March. **Transfer, Subdivision/New Certificate Fee :** *Nil.*

SHREE DIGVIJAY CEMENT CO. LTD.

ESTABLISHED in 1944. **Directors :** Gokuldas Bangus (*Chairman*), Narsingdass Bangus, Madanlal Somani, Dr. Ramnath Poddar, M. G. Parikh, Mukul Harkisondass, S. C. Chaturvedi, Radheyshyam Chittangia and N. D. Dalal. **Secretary & Finance Controller :** A. P. Sharma. **Jt. Secretary:** N. L. Mandhana. **Registered Office :** Digvijaygram (Sikka), Via Jamnagar, Gujarat. Telegrams : 'JAMCEMENT', Sikka. Telephone : 23: **Administrative Office :** SHREENIWAS HOUSE, Hazarimal Somani Marg, Bombay-400 001. Telegrams : 'JAMCEMENT'. Telephones : 268241 (12 lines). **Auditors :** M/s. Batliboi & Purohit ; M/s. Vatsaraj & Co.

Objects and Activities : Manufacture of Cement and asbestos products. The factories are at Digvijaygram (Via Jamnagar) ; Digvijaynagar, Ahmedabad, and Sewree, Bombay. The Company has mechanised quarrying and handling processes and installed aerial ropeways for loading clinker and packed cement and transportation of sand.

Licensed Capacity :

Cement—8,40,000 tonnes.

Asbestos Products—98,000 tonnes.

Installed Capacity :

Cement—8,40,000 tonnes.

Asbestos Products—68,000 tonnes.

The Company has embarked upon a modernisation programme to convert one of its kilns to dry process with induction of precalcination technology. and has made Applications for new mining leases for limestone. A Letter of intent has been received for substantial expansion in asbestos division of 36,000 tonnes in A.C. Sheet capacity. The Company has also obtained industrial licence for increasing A.C. Pipe capacity by 30,000 tonnes per annum.

A new Company by name Shree Cement Ltd. was formed for manufacturing cement at Beawar in Rajasthan. Civil construction has commenced in this respect.

CAPITAL : Authorised : Rs. 5,00,00,000 in 3,00,000 Equity shares of Rs. 100 each and 2,00,000 Cumulative Preference shares of Rs. 100 each. **Issued :** Rs. 3,79,67,050 in 299670½ Equity shares of Rs. 100 each and 80,000—5% (free of income tax) Redeemable Cumulative Preference shares of Rs. 100 each. **Subscribed : Rs.** 3,79,28,025 in 2,99,367 Equity shares of Rs. 100 each fully paid, less 112 Equity shares of Rs. 100 each forfeited and 80,000—5% (free of income tax) Redeemable Cumulative Preference shares of Rs. 100 each fully paid, less 60 Redeemable Cumulative Preference shares of Rs. 100 each forfeited, plus forfeited shares (amount originally paid) Rs. 8,000 and application and allotment money on 21 Equity share coupons Rs. 525.

In 1979, 48,876 Equity shares of Rs. 100 each were issued as Bonus at 1 : 5 to holders as on 30th April 1979.

Date of Accounts : 31st December.

Transfer Fee : *Nil.* **Sub-division, New Certificate Fee :** 50 p.

Dividend Declared : 1981—16%, 1980—15% and 1979—15%.

Laxmi Asbestos Products Ltd. and Shree Satyanarayana Investments Co. Ltd. are subsidiary companies.

Shree Digvijay Cement Co. Limited

SOUTHERN ASBESTOS CEMENT LTD.

ESTABLISHED in 1965. **Directors :** P. R. Ramasubrahmaneya Rajah (*Chairman*), S. Arjuna Raja, S. S. Ramachandra Raja, S. Subbuswamy Iyer, K. T. Ramachandran, Manish Bahl, I.A.S., (*Nominee* of Madhya Pradesh Audyogik Vikas Nigam Limited). **Secretary :** D. Venkataraman. **Registered Office :** 'Ramamandiram'., Rajapalaiyam-626 117. **Administrative Office :** 'Chordia Mansion', 739, Anna Salai, P.B. No. 2769, Madras-600 002. Telephones : 82006, Telegrams : 'BESTROOF'. **Auditors :** M/s. M. S. Jagannathan & N. Krishnaswami and S. Viswanathan.

Objects and Activities : The Company manufactures and sells asbestos cement sheets, asbestos cement pressure pipes, accessories and fittings. The Company is having two factories for manufacture of asbestos cement sheets—one at Arkonam, North Arcot District, Tamilnadu and the other at Karur, Dharwar District, Karnataka —and one factory for manufacture of asbestos cement pressure pipes at Maksi, Shajapur District, Madhya Pradesh.

Licensed Capacity :

1,39,980 Tonnes—Asbestos Cement sheets, accessories, pressure pipes & fittings.

Installed Capacity

1,34,680 Tonnes—Asbestos Cement sheets accessories pressure pipes & fittings.

A Letter of Intent has been received from Government of India for the establishment of a plant to manufacture 45,000 tonnes per annum of Asbestos Cement sheets in Maksi, Shajapur District, Madhya Pradesh. It is proposed to take up the implementation of the project shortly.

CAPITAL : Authorised : Rs. 3,00,00,000 in 30,00,000 Equity shares of Rs. 10 each. **Subscribed :** Rs. 87,00,000 in 8,70,000 Equity shares of Rs. 10 each fully paid-up.

In January 1980, 29,000 Equity shares of Rs. 100 each were issued as bonus @ 1 : 2 to holders as on 24th January 1980. During 1982, equity shares of Rs. 100 each were sub-divided into shares of face value of Rs. 10 each. An application to Controller of Capital Issues, Government of India, for issue of Bonus shares in the ratio of 1 : 2 along with necessary General Body approval has been made and the Government's appoval in this regard is awaited.

Date of Accounts : 31st March. **Transfer, Sub-division or New Certificate Fee :** *Nil.*

Dividend declared : 1983—20%; 1982—20%; 1981—20; 1980—20; 1979—20%.

... and petrol and kerosene by doubling our capacity

We will be **doubling** our refining **capacity** from 2.8 million tonnes of Crude per annum to 5.6 mtpa.

Which means we will be producing **thrice as much cooking gas,** twice kerosene and diesel.

And now, we also have a new paraffin wax plant capable of producing 20,000 tonnes of various grades of wax.

This will encourage a number of wax based industries in Tamilnadu. Good news?

But then MRL has always had this habit of giving our country lots of good news from the very beginning.

- Built in a **record time** of 27 months in 1969, with the **lowest foreign** component of 36%.
- Profits from the second year of operation.
- **Lowest variable processing cost** among Indian refineries.
- Seven million man-hours without a single serious accident. **A national record** and a tribute to the commitment of its employees.
- In all its 16 years of operation it has hardly **lost a working day.**

Over the years, Madras Refineries Limited has set a trend in productivity and efficiency.

Over the years, Madras Refineries Limited has set a trend in productivity and efficiency.

We are committed to maintaining this trend.

And as our experience tells us, where comitment exists, results follow.

We're cooking up some cooking gas for you!

Madras Refineries Limited

CHEMICALS & PHARMACEUTICALS

THE chemicals industry is a multiproduct and multiprocess one which occupies a pivotal position in the nation's economy. From a wide range of basic raw materials, this industry makes several heterogeneous products for diverse consumers in different sectors of the economy. Since Independence, the chemical industry has shown a phenomenal growth ; today, it is the fourth largest manufacturing industry in the country with an aggregate investment of Rs. 5,500 crores and an output of over Rs. 7,000 crores per annum encompassing a wide product range such as inorganic chemicals, fertilizers, dyestuffs, drugs and phamaceuticals, polymers, paints, plastics, pesticides, marine chemicals, petrochemicals, etc.

The organised chemical industry, was started in a modest way in 1889, with the commissioning of a unit for the manufacture of soap in Meerut. By the end of the Third Plan (1966), the first petrochemical unit had started functioning and over the years, there has been a steady, though modest, growth of this industry. During the last decade, the average growth rate of the chemical industry has been about 18 per cent compared to the general industrial growth rate of only 8 per cent. The following table indicates the growth of the chemicals industry since 1961.

TABLE 1

Industrial Production in Chemicals

Year (Monthly averages calendar months)	Chemicals & Chemical Products			Fertilizers		Drugs & Pharmaceuticals			
	Sulphuric acid	Caustic soda	Soda ash	Nitrogenous	Phosphates	Penicillin	Streptomycin	Vit. C	Aspirin
	('000 tonnes)			('000 tonnes)		(mmu)	(tonnes)	(tonnes)	(tonnes)

shifting over to alcohol and methanol which are renewable feedstocks.

India has been a world pioneer in the field of alcohol-based chemical industries. The growth of alcohol industry in India was in 3 distinct phases. The period 1937-47 was an exploratory phase into the industrial possibilities of rectified spirit. Growth of distilleries marked the second phase (1947-62) when the mainstay of the industry was the offtake of power alcohol. The third phase (1963 onwards) was one of steady progress when alcohol found wide ranging applications. Alcohol is used as an industrial raw material and for potable purposes. In recent days, more attention has come to be focused on alcohol as a probable substitute for motor gas. Though there is sufficient distillation capacity in the country, the total availability of alcohol in any given year is determined by the total production of sugar in that year.

Table 4 shows the estimates of production of sugar, molasses and alcohol during 1983-84.

TABLE 4

Estimates of Production of Sugar, Molasses, Alcohol during 1983-84

States	Sugar estimates in Dec. '83 (lakh tons)	Revised estimates in March '84 (in lakh tons)	Molasses (in lakh tonnes)	Alcohol potential (in lakh litres)

Several estimates have been made for alcohol production and demand upto 1990-91. Table 5 shows the estimate made of alcohol requirement in the country during the years 1985-86, and 1990-1991. The estimates are based on a reasonable 10% growth of organic chemical industries.

TABLE 5

Perspective Production Plan Estimates for Alcohol-based Chemicals

	Estimated demand 1985-86 (tonnes)	Requirement of alcohol (in million litres)	Estimated demand 1990-91 (tonnes)	Requirement of alcohol (in million litres)
2-Ethyl hexanol ..	37.0	122.1	67.0	221.0
Acetic acid ..	55.0	77.0	80.0	112.0
VAM ..	23.0	47.0	34.0	69.7

Potable use ..		200.0		250.0
Total alcohol demand ..		1,200.5		1,753.2

Source : Financial Express, April 20, 1984.

It can be seen that the estimated alcohol requirements of 1200 million litres in 1985-86 and 1750 million litres in 1990-91 are staggering and makes one wonder whether such high production of alcohol will be achievable. Alcohol production in the country can be increased at a lower price if existing capacities are more fully utilised and producers get adequate returns to modernise their distilleries. In view of the emerging feedstock and energy scene in a world with fast-depleting petroleum reserves, it is most imperative to develop alcohol based chemical industries, particularly with India's weak position in hydrocarbon resources.

Petrochemicals

Petrochemicals offer substantial technical and economic advantages over traditional materials such as coal, alcohol and vegetable oil in critical applications in health, housing, clothing, food production, etc. The petro-chemical industry can be mainly grouped into plastics (polyethylene, PVC, polystyrene, polypropylene,) synthetic fibres (polyester, nylon and acrylic), synthetic rubber (styrene, butadiene and polybectadiene) and synthetic organic chemicals used as raw materials for dyestuffs, pesticides, synthetic detergents and pharmaceuticals. The petro-chemicals industry is comparatively of recent origin and a beginning was made in India with the establishment of a small naptha cracker unit in Bombay by a private sector undertaking in 1967. The first integrated petrochemical complex in the country was commissioned by Union Carbide India at Trombay in 1966, whose present licensed capacity is 20,000 TPA of low density polyethylene and 10,890 TPA of chemicals. The Indian Petrochemicals Corporation Ltd., a large petrochemicals complex set up in the public sector in Baroda was commissioned in 1978. This complex consists of two units producing dimethyl terephthalate (DMT) and xylenes with the capacity of producing 24,000 TPA of DMT, 17,000 TPA of Paraxylene and 25,000 TPA of ortho and mixed xylene respectively.

The Gujarat olefins project commissioned in 1979 consists of naptha cracker, benzene/butadiene extraction units and pyrolysis gasoline hydrogenation unit. Besides these, there are downstream units including plants for the production of low density polyethylene, polypropylene, polybutadiene rubber, ethylene glycol, acrylonitrite and linear alkyl benzene. Another major petrochemical complex is under construction at Bongaigaon, Assam. The Bongaigaon Refinery and Petrochemicals Ltd. was registered in 1974 as a public sector undertaking. The refinery portion was commissioned between 1979 and 1981 ; the petrochemicals portion is under construction. The Assam Petrochemicals Ltd. was commissioned in 1976 and the caprolactum plant in 1973 near Vadodara, Gujarat. Petrofils is a polyester filament yarn project in the co-operative sector at Vadodara with a capacity of 3,500 tonnes of polyester filament yarn per annum.

Plastics

Manufacture of plastics began in India in 1958 with the establishment of Imperial Chemical Industries. In the sixties, two new petrochemical complexes were established at Bombay, and in the late seventies, the major petrochemical complex of IPCL started production which corntributed substantially to the rapid growth of the industry. Consumption for all the major commodity thermoplastics, increased from 34,300 tonnes in 1965-66 to 3,28,000 tonnes in 1982-83 which is a ten-fold increase over a span of 17 years. Table 6 gives an idea of the current plastic raw material capacity in the country which has grown from 1,00,000 tonnes in the early seventies to the present level of nearly 6,00,000 tonnes per annum.

TABLE 6

Plastics—Raw Material Scenario

(in '000 tonnes)

	Polymers licensed capacity	1981 Production	1981 Consumption	Estimated forecast Demand

Source : Commerce, October 22, 1983.

The plastics processing and conversion industry has also recorded considerable progress during this period. The present installed capacity in primary processing sector for different end-products, is approximately 10.25 lakh tonnes per annum. There are at present nearly 7,250 primary processing units (98% in the small scale sector) with investment of about Rs. 175 crores in fixed assets, having a sales turnover of about Rs. 770 crores and giving direct employment to about 1.1 lakh persons.

Paints and Varnishes

There are 17 units in the organised sector of the paints and varnish industry with a total installed capacity of 1,09,160 tonnes per year. In addition to the units in the organised sector, there are about 900 units in the small scale sector. The main problem impeding the growth of the industry is non-availability of raw material which is highly expensive because of the excessive tax element. The paint industry is raw material intensive and hence any planning for production in this industry ultimately boils down to planning the raw material procurement. Although most of the raw materials are indigenously available, the few imported items have a vital role. These items are titanium dioxide rutile, pentaerythritol and carbon black. The existing capacity of the paint industry is considered adequate if the industry could increase production within the framework of the existing licensed capacity and that already installed.

Dyestuffs and Intermediates

The production of dyestuffs in India at present is about 20,000 tonnes per annum in the organised sector and 5,000 tonnes per annum in the small scale sector. The need for establishment of large dye intermediate manufacturing capacities is judged from the requirements of 63,000 tonnes of dye intermediates in 1983-84 as against the present installed capacity of 46,000 tonnes. There are about 42 units in the organised sector. The per capita consumption of dyestuff in India is only 30 gms per year as against the world per capita consumption of 200 gms per year. Hence the need arises for the doubling of the present production of dyestuffs by the end of the Sixth Plan. The Indian technical expertise in the field is very high and the growth of the dyestuff industry in India may be considered to be satisfactory.

Fertilizers

The Indian fertilizer industry, with a total investment of about Rs. 3,925 crores is today ranked fourth in the world, so far as production of nitrogenous fertilisers is concerned and eighth in respec- of phosphatic fertilisers. Commercial production of fertilizers started in the year 1951 when the Sindri Fertilizer Factory began producing ammonium sulphate. Today the industry has a production capacity of 5.2 million tonnes of nitrogen and 1.5 million tonnes of phosphates per annum. Table 7 gives the sector-wise capacity, production and capacity utilisation for the industry.

TABLE 7

Sectorwise Capacity and Production of Fertilizer Industry (1982-83)

(in '000 tonnes of nutrients)

Source : Commerce, December 24, 1983.

There are 26 large fertilizer units, 43 medium size superphosphate plants and 60 mixing units. In addition to a 600 tpd ammonia plant at Namrup, four other plants each of 1350 tpd ammonia capacity are under construction at Hazira and Thal with a combined capacity of 1.5 million tonnes of nitrogen per annum, at an estimated cost of Rs. 2,115 crores. Six more gas-based plants and eleven phosphatic fertilizer plants are also to be executed in the coming years.

Fertilizer consumption

The Sixth Plan aims at achieving an annual growth rate of 4 per cent in food grains production. The production target for 1984-85 is 154 million tonnes, as compared to the base year's production (trend estimate) 128 million tonnes. As there is very little scope for increase in cropped area, emphasis is being placed on improving the farm productivity, through more intensive application of chemical fertilisers. The following table shows the estimated capacity production and consumption of fertilizers between 1983-84 and 1989-90.

TABLE 8

Estimated Capacity, Production and Consumption of Fertilisers from 1983-84 to 1989-90

Pesticides

The use of pestcides has become essential to agricultural production and to public health. The basic manufacture of pesticides commenced in India in 1952 with the setting up of the plant at Rishra (Calcutta) for the manufacture of benzene hexachloride (BHC) which was followed by DDT plant in 1954 in Delhi. Today, India is one of the two largest producers of pest control chemicals in Asia. About 44 technical grade pesticides are manufactured along with their plant protection and public health programmes. In 1982-83, as against the annual installed capacity of 98,013 tonnes, the actual production of technical grade pesticides was 59,000 tonnes which indicates a substantial capacity lying unutilised. The production of insecticides is highest followed by fungicides and herbicides. With the rapid changes in the cropping pattern, increased use of fertilisers and introduction of new high-yielding crop varieties, there is a good scope for increasing the consumption level of pesticides.

Drugs and Pharmaceuticals

The foundation for a modern pharmaceutical industry was laid in 1905. The industry presently comprises over 2500 tiny, small, medium and large units. Of these, only 140 units are in the organised sector. The Indian Pharmaceutical Industry consists of three distinct sectors : the Government-owned public sector ; the Private sector consisting of organised large-scale and the small-scale units ; and the foreign sector with majority as well as minority foreign equity participation. Of these, the public and the private sectors altogether account for over 75 per cent of the Indian drug market, the rest being contributed by fourteen foreign sector units. The turnover has gone up from a mere Rs. 10 crores in 1947 to Rs. 1545 crores in 1982-83. The following table gives the Sixth Plan targets of investment and production alongwith the actual performance in 1981-82.

TABLE 9

The Sixth Plan Targets of Bulk Drugs and Formulations

(Rs. million)

	1979-80 (Base year)	Position in 1981-82	Increase over Base year (%)	1984-85 Target
Investment	4,500	5,000	11.1	7,750
Production				
—Bulk drugs ..	2,260	2,750	21.7	6,650
—Formulations	11,500	13,000	13.0	24,500
Export ..	330	550	66.7	600

Source : Commerce, Feb. 26, 1983.

The public sector holds a dominant share in the production of several bulk drugs—antibiotics, sulphas, vitamins, steroids, etc. This sector accounts for over one-third of the installed capacity of the industry but it has utilised only two-fifths of its capacity, hence its contribution to drug production in the country is just about 20 per cent.

As the production of bulk drugs and their availability forms the backbone of the pharmaceutical industry in any country, the industry has over the years developed considerable technological competence in the production of large number of bulk drugs. As regards the production of formulations, it has been developed by indigenous effort. The industry is also capable of transferring the complete project design and assistance for setting up manufacturing units on a turnkey basis. As the country's requirements for drugs are so large and so rapidly expanding, there is greater need and scope for every sector of this industry—public, private and foreign — to contribute the maximum it is capable of.

Drug price policy

The New Drug Policy (NDP) of 1978 was a landmark in the integrated development of the Indian pharmaceutical industry. In the year 1979, the Government issued a revised drug price control order (DPCO) which provided for selective price control of drugs and formulations on a 'leader price' (cost of the most efficient producer) basis. By 1982, the Government had fixed the prices of 181 bulk drugs (out of 366) and 433 formulations. In addition, the prices of all the formulations in the life-saving and essential categories and 64 per cent of those in the non-essential category of formulations were also fixed. The DPCO (1979) while retaining the principle of different mark-up on essential and non-essential formulations, divides drugs into four categories, the permitted mark-up in each case being as follows: Category I—40 per cent, Category II—55 per cent, Category III—100 per cent and Category IV—free mark-up respectively. The main objectives of the new policy were to: (i) develop self-reliance in drug technology; (ii) provide leadership role to the public sector; (iii) aim at quick self-sufficiency in the output of the drugs with a view to reducing the quantum of imports; (iv) foster and encourage the growth of indigenous sector; (v) ensure that drugs are available in abundance in the country to meet the health needs of our people; (vi) make drugs available at reasonable prices; (vii) ensure the quality of production and prevent adulteration and malpractices; (viii) offer special incentives to firms which are engaged in research and development; (ix) provide other parameters to control and regulate the activity of foreign companies in accordance with the national objectives and priorities.

The principal snag on the performance of the Indian pharmaceutical industry is to be found in the operation of the price controls as per the DPCO of 1979. The drug industry is subjected to control on both prices and profits. While the prices of the finished products are controlled, those of the raw materials are not. The price of inputs continue to escalate and there is an inordinate delay in revising the fiscal prices of both bulk drugs and formulations. This has resulted in widespread sickness in the pharmaceutical industry. Moreover, due to price control, there has been a decline in the share of controlled essential drugs in the industry's total production—from 88.3 per cent in 1978 to 85.4 per cent in 1980—resulting in unnecessary imports of essential drugs, which has gone up from Rs. 57.58 crores in 1977-78, to Rs. 75.86 crores in 1981-82. As it is not an easy task to fix the statutory prices of more than 400 bulk drugs and 20,000 formulations in the pharmaceutical trade, the Government should evolve a rational apporach of selective price control on essential and life saving drugs.

Marine Chemicals

Marine chemicals industry is yet to be developed in India. The important minerals dissolved in seawater are sodium chloride, magnesium chloride, magnesium sulphate, calcium sulphate, potassium chloride and various bromides. Of these, common salt (sodium chloride) is the only one produced in sizeable quantities in India. The present annual production of salts from sea and sub-soil brine is abcut 6.5 million tonnes. The inorganic chemical industry, which produces mainly caustic soda, chlorine and soda ash, depends on salt from the sea as raw material. Thirty-five units, producing more than 6 lakh tonnes of caustic soda every year and five big units making an equal quantity of soda ash, together use about 20 lakh tonnes of common salt. Gypsum, a by-product of salt industry is used as a raw material for the manufacture of hydrated calcium silicate, Plaster of Paris, surgical bondages, gypsum boards etc. Bittern, also known as Mother Liquor, is left after the recovery of salt and it is the only source for the recovery and manufacture of other marine chemicals such as potash in the form of potassium schoenite, potassium chloride, potassium sulphate, magnesium sulphate, magnesium chloride, bromine magnesium carbonate and magnesium oxide. One lakh tonnes of bittern will yield about 9,300 tonnes of crude salt, 6,000 tonnes of sels mixt and 6,500 tonnes of mixed salt.

Sels mixt and mixed salt are rich in potassium and sodium chloride, magnesium chloride and magnesium sulphate. They are used in the manufacture of magnesium and sodium sulphates and potash fertilisers. There is also much scope for export to other countries. A plant with a daily capacity of 10 tonnes of potassium schoenits which is used as a fertiliser for plants and crops which cannot tolerate chloride ions, has been set up at Tuticorin. It has now been recognised as a scheduled fertiliser by the Ministry of Agriculture, Government of India. A plant producing 10 tonnes a day requires an investment of about

Rs. 31 lakhs and yields 15 per cent return on investment.

Bromine, another sea chemical, is used in the manufacture of organo-bromo compounds such as ethylene dibromide (EDB) and Methyl bromide. The present production of bromine is about 500 tonnes per annum against a requirement of 1,000 tonnes. A plant with a capacity of 500 kg per day liquid bromine requires an investment of Rs. 30 lakhs and gives about 25% return on investment. High viscosity sodium alginate, made from sea weed is used in food preparations, screen printing, textiles, etc. The present demand is about 1,000 tonnes per annum.

The Central Salt and Marine Chemicals Institute has developed processes now available for commercial purposes for the following marine chemicals : free flowing table salt, dairy salt, iodized salt, cattle licks, potassium chloride, potassium schoenite, refractory grade magnesia, light and heavy magnesium carbonate, magnesium oxide, bromine, sodium alginate and agar-agar.

Being endowed with plentiful resources of sea and inland brine, India is in an advantageous position to make great strides in the manufacture of salt and marine chemicals.

APPENDIX

OIL AND NATURAL GAS

In the context of soaring prices for crude, the exploration and exploitation of oil resources in the on-shore and off-shore areas has assumed great importance all over the world. In line with global trends, India has intensified its oil exploration and development endeavours a great deal in the recent past.

After having explored for and produced oil for nearly 25 years, in both Assam and Gujarat, Oil India and Oil and Natural Gas Commission, could not, with their best efforts, raise production to more than 9 million tonnes a year ; even this level could not be sustained, as the output from the Gujarat and Assam wells was declining. The year 1974, in fact, was a major milestone, with the discovery of oil in Bombay High and within a short period of little over two years since this disocovery, commercial production commenced. The off-shore area of Bombay High accounted for 5.5 million tonnes of crude in 1980-81 which increased to around 17 million tonnes in 1982-83.

The steady rise in OPEC prices since 1974 and the abrupt adjustments in these in 1979-81 have resulted in the cost of import of crude oil and petroleum products rising to a staggering Rs. 5,266 crores in 1980-81 from Rs. 1,681 crores in 1978-79. Hence the need for stepping up crude production has been recognised and special emphasis is being laid on the utilisation of proved reserves.

The country's demand projection of petroleum products during 1984-85 is estimated at 39 million tonnes of which the ONGC would be able to produce about 27 million tonnes. Together with Oil India's production of about 3 million tonnes, the total indigenous production is expected to be about 30 million tonnes, which will meet 77 per cent of the petroleum needs of the country by the end of 1985. The projection regarding an increase in crude output from onshore and offshore areas to 60 million tonnes by 1990 can be achieved only if more impressive progress is recorded in the shape of new reserves in the onshore and offshore areas. Upto March 1982, 1966 exploratory assessment wells with the hole depth of 4.11 million metres had been drilled by the ONGC. Of these, 1106 had proved oil bearing, 138 gas bearing, 41 water injection wells, 578 wells were dry and the remaining 153 wells were either under test or to be tested fully. The ONGC has discovered (upto March 1982) geological reserves of hydrocarbons amounting to 3306 million tonnes and recoverable reserves of hydrocarbons amounting to 800 million tonnes. The ONGC has drawn up an ambitious programme with a total outlay of Rs. 18,000 crores during the Seventh Five-Year Plan (1985-1990) in order to accelerate oil exploration and production. In the coming years, exploration work is to be intensified in Assam-Arakan, Krishna-Godavari and Cauvery basin. The pace of exploration in Cambay basin is to be maintained and exploration in West Bengal and the Andaman off shore areas, Ganges valley, Himalayan foot hills, Rajasthan and Orissa coast are also to be stepped up.

Refining capacity

The growing capacity for petroleum products and the need to process increasing quantities of crude from various sources necessarily calls for concurrent planning in regard to the creation of adequate refining capacity. In this respect, the Indian refineries have adequate facilities. The aggregate capacity of the 12 refineries is 37.8 million tonnes and this is expected to go upto 47 million tonnes by 1985. By the end of the Sixth Plan period, the doubling of throughput of Madras Refineries, trebling of capacity at Vishakapatnam and increase of capacity of over 30 per cent of Cochin refineries are scheduled to be completed. An increase of two million tonnes in the throughput of the Bombay unit of Hindustan Petroleum Corporation and of the Bharat Petroleum by 7.5 lakh tonnes are also scheduled to be completed by 1985. During the Seventh Plan (1985-90), there may not be any dearth of refining capacity as the project profiles of Karnal and Mangalore Refineries, each of six million tonnes capacity are being finalised.

Foreign participation in oil exploration

A new development in the oil front is the invitation extended by the Government to foreign oil companies, to explore for both onshore and offshore oil. This was due to the fact that in terms of finances, engineering and human resources, India is incapable of meeting the huge demand. To supplement the efforts of the ONGC and Oil India, selected blocks are proposed to be leased out to reputed oil companies on suitable terms.

To conclude, there are good reasons for optimism on the oil front in India. Through enhanced recovery of oil from the existing fields and covering of new areas, India could become self-sufficient within the next ten years. At present, the average recovery of oil is only 20 per cent, meaning that only one-fifth of the oil available is extracted and the remaining four-fifths is left untapped. By using sophisticated equipment and technology, even if 40 per cent of the existing reserves were to be extracted, it would mean that India's oil production could be doubled. Hence no effort should be spared in this regard so as to reduce our dependence on imported oil which is causing a big drain on our foreign exchange resources.

A.B.S. PLASTICS LTD.

INCORPORATED in 1973. **Directors :** J. J. Mehta (*Chairman*), M. D. Rajpal, N. U. Raval, K. M. Swedia, P. C. Shah and R. S. Agrawal (*Managing Director*). **Secretary :** C. V. EAST INDIA PHARMACEUTICAL WORKS LTD.

INCORPORATED in 1936. **Directors :** D. N. Banerjee, H. N. Dutt Gupta, T. K. Ghosh, S .K. Guha, K. Mukherjee, R. N. Mukherjee, N. K. Munsi, M. K. Nandi and H. N. Dutt Gupta (*Managing Director*). **Secretary :** Amit Kumar Sen. **Registered Office :** 6, Little Russel Street, Calcutta-700 071. Telephone : 43-2542 (7 lines). Telex : 021-3191. Telegrams : 'SYNTHETICS'. **Auditors :** Messrs. V. M. Chaudhuri & Co.

Objects and Activities : Manufacture of Bulk drugs viz. quiniodochlor, sodium sulphacetamide, diastase, colloidal ferric hydroxide and formulations viz. patent and proprietary medicines, pharmacopocial drugs. The factories are situated at (i) Ho-chiminh sarani, Calcutta (ii) pathalepara Road, Calcutta and (iii) Waria Road, Raturia, Durgapur.

Products	*Installed/Licensed Capacity*
I. Bulk Drugs :	
1. Quiniodochlor (kgs.)	1,20,000
2. Sodium sulphacetamide (kgs.)	24,000
3. Diastase (kgs.)	2,75,000
4. Colloidal Ferric Hydroxide (lits.)	2,19,700
5. Cincophen (kgs.)	3,600
6. Pthalyl sulphautamide (kgs.)	7,200
7. Antimony Hexonate sol (kgs.)	3,600
8. Nikethamide (kgs.)	1,560
9. Di-codohydroxy quionoline (kgs.)	4,200
II. Formulations :	
1. *Patent and proprietary medicines* :	
(*a*) Liquid (lits.)	45,79,400
(*b*) Solid	1,91,500
(*c*) Ointment (kgs.)	3,43,000
(*d*) Tablets (in Nos. crores) ..	166
(*e*) Capsules (in Nos. crores) ..	9.50
(*f*) Injectables (lits.) ..	29,900
2. *Pharmacopoeial drugs* :	
(*a*) Spirituous (lits.) ..	3,60,000
(*b*) Non-Spirituous (lits.) ..	1,44,000

CAPITAL : Authorised : Rs. 1,00,00,000 in 5,000—6% Cumulative Preferencd shares of Rs. 100 each and 9,50,000 Ordinary shares of Rs. 10 each. **Issued** : Rs. 69,00,000 in 3,000—6% Cumulative Preference shares of Rs. 100 each and 6,60,000 Ordinary shares of Rs. 10 each. **Paid-up:** Rs. 67,76,971 in 1,859—6% Cumulative Preference shares of Rs. 100 each fully called up and 6,59,718 ordinary shares of Rs. 10 each fully called up, *Less* : Calls unpaid Rs. 6,109. Of the above shares 5,49,718 Ordinary shares were issued as full paid-up Bonus shares by Capitalisation of General Reserve.

Date of Accounts : 31st December.

Dividend declared : 1982—12%, 1981—6%, and 1980—8%.

HERDILLIA CHEMICALS LTD.

INCORPORATED in 1963. **Directors :** G. P. Goenka (*Chairman*), J. N. Guzder (*Vice-Chairman*) J. K. Clubwala, W. H. Duncan Jr. (*alternate* to W. H. Duncan Jr.) R. Saumann, R. Setlur (*alternate* to R. D. Saumann), S. R. Vakil, F. W. Wheatley, R. S. Lodha and M. B. Williamson. **Secretary and Financial Controller :** M. A. E. Paes. **Registered Office :** 'Air India Building', Nariman Point, Bombay-400 021. Telephone : 2024224. Telegrams : 'HERDILLIA'. **Auditors :** Messrs. A. F. Ferguson & Co.

Objects and Activities : Manufacture of heavy organic chemicals such as phenol, acetone, diacetone alcohol, phythalic anhydride, phthalates, cumene and alpha methyl styrene. The company has technical collaboration with Messrs. Distillers Co. Ltd. U.K.

Plants for the recovery of Cumene and Fumaric Acid from by-product/waste streams have been installed and trial runs were completed during they ear 1983-84.

Products		*Licensed Capacity* (TPA)	*Installed Capacity*
1. Phenol	..	15,240	19,050
2. Acetone	..	9,144	11,430
3. Diacetone alcohol	..	5,080	2,250

HINDUSTAN ORGANIC CHEMICALS LTD.

(A Government of India Enterprise)

INCORPORATED in 1969. **Directors :** H. Krishnamoorthy (*Chairman & Managing Director*), V. Kumar, Dr. R. V. Vaidyanatha Ayyar, Dr. A. Aghoramurthy, Dr. L. K. Doraiswamy, A. N. Batabyal and S. Ramaswamy. **Secretary :** V. K. Aundha. **Registered Office :** 'Rasayani', Kulaba District, Maharashtra-410 207. Telephone : 21 to 26. Telegrams : 'HINORCH', Rasayani.

Objects and Activities : Manufacture of nitrobenzene, hydrogen aniline, acetanilide, sulphuric acid/oleum, meta amino phenol, formaldehyde (37%), bhenzene hexachloride, nitrotoluenes, dinitrobenzene, chlorobenzenes, nitrochlorobenzenes and concentrated nitric acid.

The phase-II expansion programme for doubling the capacities of hydrogen nitrobenzene aniline and acetanilide plants and the setting up of 16,500 TPA capaciiy Conc. Nitric acid plant has been completed. Expansions of nitrotaluene and nitrochlorobenzene plants are nearing completion. The company has entered into a collaboration agreement for the supply of basic-engineering with Messrs. Universal Oil Products of U.S.A.

INDIAN OXYGEN LIMITED

INCORPORATED in 1935. **Directors:** Russi Mody (*Chairman*), S. B. Budhiraja (*Managing Director*), K. P. Deb, J. K. Hedley, Dr. D. C. Kothari, Bhaskar Mitter, M. M. Sabharwal, and Graham Winfield. **Secretary:** P. R. Roy. **Registered Office:** Oxygen House, P34 Taratala Road, Calcutta-700 088. **Telephone:** 77 1027 (20 lines). **Telegrams:** 'OXYGEN' Calcutta. **Auditors:** M/s. Price Waterhouse & Co.

Objects and Activities: Manufacture of industrial and medical gases, liquid oxygen explosives, welding electrodes, welding rods, welding fluxes, electrode core wire, gas cylinder valves, small tools, medical equipment and accessories, air separation plant, associated and cryogenic equipment. The Company also undertakes on contract installation of plant and renders all such technical and engineering services as may be expected of such manufactures. The factories and gas compressing stations are situated at Ahmedabad, Ambattur (Madras), Amritsar, Asansol, Bangalore, Bombay, Calcutta, Delhi, Gauhati, Ghaziabad, Hyderabad, Jamshedpur, Kanpur, Visakhapatnam, Ranchi, Rishra, Shamnagar and Tiruchirapalli.

INDIAN PETROCHEMICALS CORPORATION LTD.

INCORPORATED in 1969 **Directors:** Dr. S. Ganguly (*Chairman & Managing Director*), Dr. I. Z. Bhatty, Dr. Nilay Chaudhuri, Dr. L. K. Doraiswamy, M. P. Modi, S. Ramaswamy M. Sivagnanam, R. Vasudevan, J. S. Bakshi (*Director-Finance*), H. S. Shah, (*Director-Marketing*), S. K. Mukherjee (*Director-Personnel*) and R. Sethuraman (*Director-Operations*). **Secretary:** T. Neelakantan. **Registered Office :** P. O. Petrochemicals, P.C. 391 346, Dist. Vadodara, Gujarat. Telephones : 7411-7611-7661. Telex : 0175-364 and 365. Telegrams : 'PETCOMPLEX'. **Auditors :** Messrs. G. P. Kapadia and Co.

Objects and Activities : Manufacture of petrochemicals viz. aromatic chemicals (DMT and xylenes) and olefins (ethylene, propylene, butadiene, benzene and pyrolysis gasoline). As downstream products of the olefins plant, the company also manufactures low density polyethylene (Indothene), polypropylene (Koylene), polybutadiene rubber (cisamer), ethylene glycol, linear alkyl benzene, acrylonitrile and acrylic fibre. In addition, other chemicals such as acetonitrile, polyalkyl benzene, heavy paraffins, carbon black feedstock etc. are also manufactured.

Projects completed/under implementation : The Vinyl chloride/polyvinyl chloride project and the petroleum resins projects were completed during the year 1984.

The important projects currently under implementation are :—

(i) FCC off gas utilisation-polypropylene Copolymer project, (ii) Acrylic Fibre expansion project, (iii) Xylenes expansion project, (iv) Linear Alkyl Benzene project expansion and (v) Dimethyl Terephthalate expansion—Phase II.

The company also proposes to expand the capacity of the Acrylonitrile plant from 24,000 M.T.A. to 30,000 M.T.A.

Products	*Licensed/Installed Capacity* (Tonnes per annum)
1. Aromatics—	
Ortho & Mixed xylenes ..	23,500
Paraxylene ..	17,000
Di-methyl terephthalate (DMT) ..	30,000
C-9 Aromatics ..	10,000
2. Olefins—	
Ethylene (polymer grade) ..	1,30,000
Propylene (polymer grade)	38,000
Propylene (chemical grade)	43,300
Butadiene ..	22,000
Benzene ..	23,600
Light Pyrolysis gasoline ..	29,300

Products		*Licensed/Installed Capacity* (Tonnes per annum)
Heavy pyrolysis gasoline	..	34,600
Raffinate	..	8,200

MADRAS REFINERIES LTD.

INCORPORATED in 1965. **Directors :** V. R. Deenadayalu (*Chairman and Managing Director*), V. Selvaraj, I.A.S., John Mathai, I.A.S., K. Sandilya, Ashok Joshi, I.A.S., M. Mahmoud Zadeh, J. Sohrabian, Joseph Warren, Jr. and R. M. Hubbard. **Secretary :** N. Suryapraksarao. **Registered Office :** Refinery House, Manali, Madras-600 068. Telephone : 553151, 552566 and 554489. Telex : 41-455 MRLIN. Telegrams : 'MAREFIN'. **Auditors :** Messrs. R. G. N. Price & Co.

Objects and Activities : The refinery processes 2.8 million tonnes of crude imported from the various oil fields in Iran as well as other crudes supplied by the Oil Co-ordination committee set up by the Government of India. The products produced are liquified petroleum gas, motor gasolene, naphtha, superior kerosene, aviation turbine fuel, high speed diesel oil, lube base stocks, refinery fuel oil, asphalt and sulphur.

The refinery has undertaken an expansion project to process an additional 2.8 million tonnes per annum of crude. The company also has plans for manufacturing 20,000 tonnes per annum of paraffin wax.

The refinery is a joint venture of Government of India, Messrs. National Iranian Oil Company, Iran and Messrs. Amco India Inc. of USA.

The factory is located at Manali, Madras.

CAPITAL : Authorised : Rs. 13,50,00,000 in 1,35,000 Equity shares of Rs. 1000 each. **Paid-up :** Rs. 12,87,49,000 in 1,28,749 Equity shares of Rs. 1000 each.

Date of Accounts : 31st March.

Dividend declared : 1983—15 per cent 1982—15 per cent, 1981—15 per cent and 1980—15 per cent.

PANDIAN CHEMICALS LTD.

INCORPORATED in 1972. **Directors :** F. J. Vaz, I.A.S., PL., Palaniappan, J. Jawahar, A. Chelladhurai, M. Dhanasekarapandian, A. Grahadurai and A. Annamalai (*Managing Director*). **Secretary :** K. Sathiavan. **Registered Office :** 41, Besant Road, Chokkikulam, Madurai-625 002. Telephone: 42434/42435. Telex: 0445 249 PCL IN. Telegrams : 'CHLORATE'. **Auditors :** S. Chandrasekaran.

Objects and Activities : Manufacture of potassium chlorate. The factory is situated at Narasingampatti, Madurai District, Tamil Nadu.

	Licensed/Installed Capacity
Potassium chlorate ..	4,825 M.T.

The Company has floated a subsidiary company under the name 'Tamil Nadu Chlorates Limited' for the manufacture of potassium chlorate and sodium chlorate.

CAPITAL : Authorised : Rs. 50,00,000 in 50,000 Equity shares of Rs. 100 each. **Paid-up :** Rs. 48,00,000 in 48,000 Equity shares of Rs. 100 each fully paid.

The company issued Bonus Equity shares in the ratio of 1 : 1 during the year 1980.

Date of Accounts : 31st March.

Dividend declared : 1983—10 per cent, 1982—10 per cent, 1981—10 per cent and 1980—10 per cent.

PAUSHAK LTD.

INCORPORATED in 1968. **Directors :** C. R. Amin (*Chairman*), R. B. Amin, Dr. J. S. Patel, B. D. Patel, M. D. Shah, Dr. M. R. S. Iyengar and R. C. Shah. **Secretary :** V. R. Shah. **Registered Office :** Alembic Road, Baroda-390 003. Telephone : 82551 and 82568. Telex : 0175/304 Telegrams : 'PAUSHAK'. **Auditors :** Messrs. K. S. Aiyar & Co.

Objects and Activities : Manufacture of sulphuric acid, sodium sulphite, super phosphate, mixed fertilisers, formulations in terms of technical materials, technical carbrayl, oil, meals and cakes, alpha napthol, napthalene acetic acid, phosgene gas and oxygen gas. The factories are situated at Panellav, District panchmahals and Baroda (Gujarat).

Products	*Licensed Capacity* (M.T./Annum)	*Installed Capacity*
1. Sulphuric acid ..	18,000	18,000
2. Sodium sulphite	500	500
3. Super phosphate ..	33,000	33,000
4. Formulation in terms of technical materials	1,052	1,052

ZANDU PHARMACEUTICAL WORKS LTD.

INCORPORATED in 1919. **Directors :** Shantilal H. Shah (*Chairman*), Dr. C. L. Jhaveri, Indravadan M. Desai, P. S. Nadkarni, Smt. A. J. Vaidya, Jaisingh Vithaldas, R. S. Bhatt and R. D. Shah (*Nominee* GIIC & GSFC). **Secretary :** Noel Jacob. **Registered Office:** Gokhale Road, South, Bombay-400 025. Telephone : 4227021. Telegrams : 'ZANDU'. **Auditors :** Messrs. Nanubhai & Co.

Objects and Activities : Manufacturers of Ayurvedic and Allopathic preparations. The company's products are sold under the trade name 'ZANDU'.

	Installed Capacity
Pharmaceutical preparations	5,19,500 kgs. 10,67,000 litres 4,500 lakh Nos.

CAPITAL : Authorised : Rs. 50,00,000 in 5,000—7½ per cent Cumulative Preference shares of Rs. 100 each and 45,000 Ordinary shares of Rs. 100 each. **Paid-up :** Rs. 40,00,000 in 5,000—7½ per cent Cumulative Preference shares of Rs. 100 each fully paid-up and 35,000 Ordinary shares of Rs. 100 each fully paid. (Out of the above, (*a*) 12,500 Ordinary shares of Rs. 100 each were allotted as fully paid-up as Bonus shares by capitalisation of share premium and General Reserve. (*b*) 885 Ordinary shares of Rs. 100 each issued as fully paid-up pursuant to contracts with vendors and others without payment.)

The company had issued Right Equity shares as follows: (i) In 1971-72, 2,500 Equity shares were issued at par in the proportion 1 : 7. (ii) In 1972-73, 2,500 Right Equity shares were issued at par in the proportion 1 : 8 and (iii) In 1974-75, 2,500 Right Equity shares were issued at par in the proportion 1 : 9. (iv) In 1981-82, 10,000 Bonus Equity shares were issued in the proportion 2 : 5.

Date of Accounts : 31st March.

Dividend declared : 1983—15 per cent, 1982—15 per cent, 1981—15 per cent and 1980—14 per cent.

इंडियनऑयल *Can Help You*

Save Rs. 1.0 lakh per month without additional investment.

If the Thermal efficiency of your oil-fired boiler is less than 80%, they are burning your profits.

Avail financial assistance under Indianoil's " Boiler Replacement Scheme " and save at least one lakh rupees per month.

A boiler generating 4 tonnes/hr. steam at 50% thermal efficiency results in loss of 37,000 litres of furnace oil per month costing over one lakh rupees as compared to similar boiler at 80% efficiency.

A new two-tonne boiler, for instance, will pay for itself in less than two years. From then on the recurring saving is pure profit.

For details of the Scheme contact the nearest Indianoil Divisional Office.

Indian Oil Corporation Limited

All the world for a rose,
Stanrose

Standard Mills and Surat Cotton Mills produce a vivid range of STANROSE Fabrics in 100% cotton and blends of cotton with synthetics — from shirtings, suitings, voiles and dress materials to furnishing, bedsheets and printed bedcover sets. Elegant readymade shirts and blouses are produced by Mafatlal Apparel.

To get faultless quality at all times, we have recently installed shuttleless looms from PICANOL and SULZER.

Our beautiful STANROSE Fabrics and readymade garments are exported all over the world: USA, Canada, U.K., West Germany, France, Italy, Denmark, Sweden, Finland, U.S.S.R., Poland, East Africa, Saudi Arabia, Hong Kong, Singapore, Malaysia and various other countries.

Standard Alkali (Chemicals Division of the Standard Mills) incorporates the latest technology for the production of basic inorganic and organic chemicals.

With the help of the Research & Development Department it ensures a continuous flow of chemicals meeting the most exacting international standards.

ELECTRICITY

ELECTRICITY is one of the most powerful instruments of socio-economic change, and a most vital part of the infrastructure necessary for economic growth. To the household consumer it represents the most convenient and versatile form of energy, while to most industries, it is the basic input. Power today is playing an increasingly important role in agriculture and transport. With the rising costs of petroleum products imposing a severe burden on the balance of payments of the country, the need for an alternate source of energy is being increasingly felt and the development of power considered an important strategy in the economic development of India. As the economy develops the demand for power grows roughly twice as fast and because power is highly capital intensive, its share in fixed asset formation is increasing rapidly. This has established a two-way relationship between the power sector and the economy.

Electricity, by virtue of being a superior form of energy, has emerged now as an essential input, very often in replacement of the other forms of energy. Although in absolute terms, the level of electrical energy consumption in India is far behind that of developed countries, what is significant is the pace with which the economy is becoming dependent on electricity as a basic input. The power sector accounts for the largest share in our plan outlays. The share of the power sector has gone up from 12 per cent of the total public expenditure in the First Plan to 20 per cent in the Sixth Plan. Today, the investment in the power sector is about Rs. 19,265 crores, generating sales of about Rs. 6,100 crores (1982-83) and employment to some 7.2 lakh people. In terms of energy generation, the installed capacity in utilities and non-utilities taken together, is now around 33,000 MW as compared to 1,362 MW in 1947. The growth has been from about 4 TWH to over 120 TWH. Apart from a corresponding expansion of the transmission and distribution system, there has also been a qualitative change and the industry has attained a high measure of sophistication in recent years.

We have in India today large generating stations, employing individual units rated as high as 210 MW. Voltage levels in the extra tension transmission system have moved up for the long distance lines from 110/182 KV to 400 KV and 48 per cent of India's villages have been energised, providing access to electricity for 68.5 per cent of the rural population.

Power position

The total power generation in the country increased by just 5 per cent during the first nine months of 1983-84 against 10 per cent targeted for the full year. The growth rate of power generation had decelerated to 7 per cent in 1982-83 from the high of 10.2 per cent recorded in 1981-82. The growth of power generation was depressed by a setback to hydel power generation and by a slack in thermal power generation reflecting poor capacity utilisation of thermal power plants.

With the commencement of power generation by the 235 MW nuclear power station at Kalpakkam in the South, total nuclear power generation increased substantially despite the closure of one unit at Rajasthan. The impact of the spurt in nuclear power output (which accounts for a mere 2.5 per cent of the total power output) on power generation in the country was marginal.

The brunt of the slack in power output was felt by the Southern and the Eastern regions which together account for 40 per cent of the total power requirements of the country. The power position in the Southern region took an acute turn for the worst following a sharp fall in hydel power generation, which was hardly mitigated by a small increase in thermal power output. In the Eastern region, which depends overwhelmingly on thermal power, the growth in thermal power generation was less than one per cent.

In contrast, both the Northern and the Western regions recorded impressive spurts in thermal power generation. Power output in the Western region was supported in a big way by a rise in hydel power generation. The growth of hydel power was small in the Northern region. The North-Eastern region recorded a big rise in hydel power generation. The increase in thermal power generation in this region was comparatively small.

The growth of power supply in the country fell substantially short of requirements. The deficit in power supply increased to 11.8 per cent in the first nine months of the current fiscal year from 8.2 per cent in the corresponding period of the last year. Power deficits increased in the Southern, the Eastern and the Northern regions but decreased in the Western region. The North-Eastern region recorded a deficit this year against a surplus last year. Power deficits lingered in all states except Delhi and Chandigarh. Power shortages increased in eight states but shrank in six. Addition to new capacity in the first nine months of the current fiscal year was poor and fell substantially short of the target for the full year. Power generation generally improves in the final quarter of the year. However, such prospective improvement is unlikely to push up the growth rate for 1983-84 to anywhere near the targeted growth rate for the year.

Detailed official data show that the total power generation—hydel, thermal and nuclear—rose by 5 per cent to 1,02,248 Gwh in April-December 1983 from 97,344 Gwh in the corresponding period of last year. Power generation is targeted to increase by 10.2 per cent to 1,46,000 Gwh in 1983-84 full year. The entire increase in power generation is estimated to come from thermal and nuclear power output. Hydel power generation in 1983-84 full year is expected to remain unchanged at 49,000 Gwh which is the level recorded in 1982-83. Thermal power generation is targeted to increase by 15.1 per cent to 93,500 Gwh and nuclear power generation by 58.8 per cent to 3,500 Gwh. Hydel power generation declined by 0.7 per cent to 38,041 Gwh in April-December 1983 from 38,297 Gwh in the corresponding period of 1982. Total thermal power generation in the country rose by 7.1 per cent to 61,579 Gwh in April-December 1983 from 57,471 Gwh in the corresponding period of the previous year.

With the slack in the growth in power generation in the country, the growth in power supply fell substantially short of demand. The growth of power generation was inadequate (5 per cent) during April-December 1983. After allowing for power consumption by the generation units and net of transmission losses, the total power supply in the country increased by only 7.9 per cent to 95,028 Gwh in April-December 1983 from 93,292 Gwh in April-December 1982. Power requirement spurted by 6.0 per cent to 1,07,763 Gwh from 1,01,628 Gwh during the period. Power deficit in the country increased by 11.8 per cent (12,735 Gwh) in April-December 1983 from 8.2 per cent (8,335 Gwh) in the corresponding period of 1982.

Problems of the Power industry

A disturbing feature of the power front is the lag in investment and project implementation. One reason for a sustained shortfall in power supply in many states is the heavy slippages in instalment of new capacity. Power projects, by their very nature involve a long gestation period and modern power stations, especially thermal power stations are quite complex, requiring simultaneous and synchronised implementation of a large number of activities. In the case of Hydro-power projects there can be problems of other kinds, such as unexpected difficulties in dam foundations, tunnelling and so on. If projects are to be commissioned on time, the first prerequisite is a strong and systematic project management, which involves strict adherence to delivery schedules by the equipment manufacturers and suppliers of essential inputs such as cement and steel. It would also involve large manpower, maintenance of smooth industrial relations and the flow of funds to project requirements. These are weak areas in many State Electricity Boards which bear the brunt of responsibility for the implementation of the power programme.

Yet another crucial area which needs much attention is better utilisation of generating capacity already installed. Since electricity is not a commodity which can be stored, capacity utilisation depends on both the operating performance of the generating system and the pattern of consumption by different categories of consumers.

In India, the main problem has been that on account of abnormally high forced outages and excessive time taken for plant maintenance, the availability of power plant has been below international norms. Forced outages have arisen largely on account of deficiencies in plant and equipment, poor quality of coal and unsatisfactory operation and maintenance.

Inconsistent coal quality

It is common knowledge that the abundant reserves of low grade coal available in India are best utilised for power generation. Modern pulverised fuel boilers are supposed to be capable of burning coal with a high content of ash. In practice, however, serious problems arise on account of inconsistent quality of coal supplied to power houses and in many cases by the admixture of coal with extraneous matter.

Coal supply to the new power stations mostly, comes from large mechanised open cast mines where the method of mining and the scale of production do not lend themselves readily to separation of shale, stone and other matter from coal. It is also seen that in the same coal seam, there could be variations in the quality of coal. If the power houses are to operate with a high degree of efficiency and reliability, a close regulation of the quality of coal fed into the boilers is essential. This means that there should be a planned programme for the introduction of coal preparation facilities at the mine-head. A right step in this direction, which has already been taken up is the introduction of coal-handling plants, which will help not only to size the coal but to eliminate non-coal matter.

Transport bottlenecks

A related problem is that of ensuring adequate coal supply to the power houses. For a variety of reasons, many of the power stations are still leading a wagon-to-boiler existence. Constraints in coal production and transport bottlenecks have stood in the way of adequate stocks being built up and maintained at power houses. As a result, with the slightest dislocation of the transport system which might be caused due to humanly uncontrollable causes such as floods, breaches, etc., there is loss of power generation. Since 70 per cent of the coal movement is handled by rail, the main burden of coal transport to power station devolves on the railways. Of late, railways have improved their performance and there has been a marked increase in the quantity of coal supplied to power houses. With continuing expansion of thermal power generation, larger and larger quantities of coal have to be carried by the Railways and the question is whether the railway system can take on this burden or whether there are alternative and cheaper means of coal transport. A possibility which is currently under study is that of transporting coal by pipeline in the form of slurry to power houses. It is an accepted fact that operation and maintenance have a direct impact on plant performance. The operation of generating stations and High Voltage Transmission System requires a high degree of skill and experience. Free interchange of personnel between transmission and distribution of power does not encourage specialisation in any of the fields but only results in overall reduction in efficiency. If the situation is to improve, the engineering and technical personnel in the State Electricity Boards will have to extend their full co-operation and enable development of specialised cadres. As regards maintenance, a major problem which is currently being faced and is affecting capacity utilisation is the long time taken to carry out annual and capital maintenance of boilers and turbo-generators.

Economic Pricing

Electricity by no means is a cheap form of energy. If its efficient use is to be encouraged, the price of electricity should reflect its true economic value. There could be cross subsidisation within the tariff structure to a limited extent, but this cannot be extended to a level when the viability of the industry is jeopardised. We are now facing a situation in which, required investment funds for new power projects to meet the power requirements during the later part of the decade are not forthcoming in many States.

It is a known fact that the price policy in a Public Corporation primarily aims at the following: (a) to make neither a loss nor a profit after meeting all capital charges and (b) the price it charges for different services should correspond to relative costs. There is no uniform pricing policy for all public sector enterprises as it is neither practicable nor desirable. The supply of electricity at low prices to industrial concerns and supply of water for irrigation at no-profit - no-loss basis are examples to emphasise the fact that public enterprises adopt a deliberate policy of lower prices. The public undertakings are to function under various social obligations. The minimum to be aimed at should be such that the enterprise must pay its own way after providing for charges and depreciation calculated on a realistic basis. The guiding principle must be to have an optimum combination of the cost of service principle and the value of service principle.

While formulating the price policy, the following principles should be kept in mind: (a) Prices should be fixed so as to enable the undertaking to recover the full cost of production and also a reasonable rate of return on capital employed, unless there exists a clear reason for public interest in conformity with the directive issued by the Government; (b) In the public utilities and services, importance is to be given to output rather than to return on investment, the former being extended upto a level at which marginal cost is equal to price; (c) Prices should be such which equate demand and supply; (d) The price structure should lead to most economical use of all scarce resources; and (e) Public enterprises should aim at making substantial amount of contribution to capital development out of their own earnings.

As the policy of the Government is to encourage investment and discourage excessive consumption, a discriminative pricing policy is always followed in the case of electricity which is used both for production and consumption purposes. A higher price is charged for consumption purposes and a lower price for production purposes. It should be borne in mind, however, that the use of a product having higher elasticity can be charged lower price than the product having lower elasticity. The State Electricity Boards do not have any control over fixing their trariff rates. They heavily subsidise electricity supply to agriculturists at the cost of the general tax payer.

Hydel Power

In the present global energy context, there are certain aspects which have acquired a new significance. The development of hydro-power has to be given a major thrust in the current decade. We still have large untapped hydro-power potential, but its development has slowed down on account of lack of financial resources, inter-state rivalry, inefficiency of certain State Electricity Boards, variations in the course of the monsoons, etc. During the first three quarters of the current year, hydel power generation has gone down by 8.7 per cent. The setback has occurred in both Southern and Northern regions which together account for 79 per cent of the total hydel power output in the country. A concerted effort will have to be made to overcome the hurdles and enlarge the share of the hydro-power generation in the country. This will help not only in tapping a renewable resource of energy, but will provide essentially-needed peaking support to thermal power generation with the pattern of demand for electricity. Since the planners' initial enthusiasm about the large hydel projects has waned somewhat, India will do well to take recourse to the Chinese pattern of micro and mini hydel projects wherever the terrain is suitable. The

State Electricity Boards and utility bodies would also have to give greater attention to setting up of technical advisory cells which would carry out in-depth studies on the efficiency of energy use and provide adequate technical advice and guidance.

Thermal Power

By far thermal units have emerged as the largest source of power in India. But unfortunately, the progeress of power generation in this sector has not been marked by any new breakthrough. Thermal generation in the country improved by just about 7 per cent during the period April-December 1983. In our present context, stress continues to be on thermal power station because of shorter construction time. The construction period for these plants is being shortened by using better project management techniques. It has been possible to improve overall efficiency of thermal plant by using gas turbines in conjunction with conventional steam turbines.

It has been estimated that during the period 1980-90, the maximum requirement of thermal plant equipment will be of the order of 3,500 MW a year. This consists mainly of 11 units of 200 MW and two units of 500 MW a year plus a few units of smaller ratings. Each State Government agrees to give the necessary priority in allocating sizeable resources for power development. Still the extent of resources required for taking up the above programme is so enormous that it cannot be done by the States alone. Therefore, the Union Government has decided to step up Central generation in the country and has started establishing Super Thermal Power Stations in different regions. The National Thermal Power Corporation (NTPC) was established in 1975 with the object of planning, promoting and organising integrated development of thermal power in the country. The Corporation set up the first super thermal power station at Singrauli on the border of U.P. and M.P. with an installed capacity of 20,000 MW. Simultaneously, three other projects were under way at Korba in Madhya Pradesh, Ramagundam in Andhra Pradesh and Faraka in West Bengal with an installed capacity of 2,100 MW each.

Nuclear Power

In recent years, there has been considerable public interest about the role of atomic energy in power development. The Indian Government considered introduction of nuclear power imperative as early as the mid-fifties and the construction of the first nuclear plant was taken in 1959 at Tarapur on a turnkey basis with the help of a leading U.S. power plant supplier. This plant has been in operation for 12 years and has made a significant contribution to the power system of Western India. Average availability factor in the last 4-5 years has been around 75 per cent but the capacity factor which was in excess of 60 per cent in 1976-77 has gradually tapered off to around 50 per cent in the last two years. This was because of the necessity to limit the power level of the reactors to stretch out the available fuel in view of uncertain supply of enriched uranium from the U.S.A. The second nuclear power station at Rajasthan consisting of two units of 220 MW each was on an agreement with Canada whereby design and equipment for a heavy water reactor were provided. These reactors use natural uranium as fuel and hence do not involve import of nuclear fuel. For this reason, heavy water reactors have been chosen as the main line for the first phase of our nuclear power programme. It should not, however, be forgotten that our nuclear power programme has experienced significant cost overruns and delays. Construction periods have been as much as 14 years for the third nuclear station at Kalpakkam and may be almost 12 years for the fourth station at Narora. These delays have tended to erode the credibility regarding the success of nuclear power as a viable source of energy for this country. In order to ensure a reasonable living standard to the people of this country, there should be power of at least one KW per capita per annum and that would need generation of 3,00,000 MW by the end of the Century, but all that is being aimed at is a measly 1,20,000 MW. Besides the nuclear power stations in Narora and Kalpakkam, it is proposed to set up 12 more nuclear power units in different parts of the country with 235 MW nuclear reactors.

Biogas

This is a recent source of power discovered by the Chinese. It is also described as the 'Chinese Biogas Miracle'. The energy is tapped from waste materials such as animals excreta. The system of operation is simple, cost effective, and also leaves back a lot of waste heat after the generation of biogas which is utilised for diverse purposes. The technology of gobar gas plants raises the efficiency levels of energy conversion and also produces manure, which can be a subsitute for fertilisers produced by energy-intensive industrial processes. The pioneer of gobar gas plants has been the Khadi and Village Industries Commission of India. This Commission, apart from extending technical assistance and marketing gobar gas plants of various sizes has also been granting loans and other forms of financial assistance for the construction and setting up of such plants. The potential presented by this source of energy could be realised by a three-pronged programme directed mainly at rural areas. The abundance of dung in the country and India's pre-eminence in the technology and practice of running gobar gas plants makes this energy source an attractive alternative.

The Department of Power has proposed the setting up of twelve 130 MW gas-based power plants in the Northern and Western regions. The total requirement of gas has been estimated at 5 million cubic metres for a period of 15 years. As the demand in the Northern region is growing at the rate of 20 to 30 per cent per annum, import of gas-based plants is felt necessary. There are signs of increasing strain on the power system in the northern region which is expected to become a major hurdle in the development of agriculture and industry if immediate steps are not taken to create additional capacities.

Conclusion

If India is to maintain a reasonable rate of economic growth, continued expansion of the power sector is imperative. On account of the capital intensive nature of the industry, this would mean that a sizeable proportion of the country's investible resources will have to be earmarked for this sector in successive Five-Year Plans. In a developing country such as India, there are many other sectors which have a claim on the available resources. It is therefore, essential that the power industry displays a high degree of operational efficiency with the help of management techniques, development of transmission systems, project management planning, standardisation and above all financial viability.

* Including 957 MUs wheeled for MSEB w.e.f. 16-9-1981.

The Company proposes to replace initially the three 60 MW units and later the 150 MW units at Trombay by a single, modern and more fuel efficient 500 MW unit.

The Company has also its activities in the extended development of sophisticated electronic systems required for incorporation in the Electric Companies' network and for meeting Government and Defence needs. The new 60 MVA transformers have been installed at Saki and Parel Receiving Stations and a new Receiving Station with an initial capacity of 20 MVA is under construction at Vikhroli to meet the load growth in the eastern suburbs.

CAPITAL : Authorised : Rs. 12,25,00,000 in 50,000—7% Cumulative Preference shares of Rs. 100 each, 60,000—11% Cumulative Redeemable 'A' Preference shares of Rs. 100 each and 10,25,000 Ordinary shares of Rs. 100 each and 90,000 Unclassified shares of Rs. 100 each. **Issued and Subscribed :** Rs. 10,04,71,013 in 49,340—7% Cumulative Preference shares of Rs. 100 each fully paid, 44,435—11% Cumulative Redeemable 'A' Preference shares of Rs. 100 each, fully paid (redeemable on 1st April 1995) and 9,35,052 Ordinary shares of Rs. 100 each fully paid, *less* : Rs. 24,11,687 representing share allotment and Call moneys unpaid.

Note : Of the above Ordinary shares, 37,005 shares represent Bonus shares, issued by capitalisation of General Reserve and 40,000 shares issued on exercise of the option by the Financial Institutions for the conversion of a part of 11% Sixth Debentures (1981-88).

THE CALCUTTA ELECTRIC SUPPLY CORPORATION (INDIA) LTD.

REGISTERED as a Public Limited Company in 1978. **Directors :** Bhaskar Mitter (*Chairman*), Asit Kumar Mitra (*Managing Director*), Barendra Prasad Ray, Kuldip Prakash Taimni, Inder Jit Laul, Jiban Krishna Sarkar, Birendra Nath Mandal, Debarata Basu, Salil Kumar Mitra, Chitta Ranjan Paul, Pruya Brata Ghosh. **Secretary ;** Chinnoy Chatterjee. **Registered Office ;** 'Victoria House', Chowringhee Square, Calcutta-700 001. Telegrams : 'COTYLIGORM'. Telephones : 23-2341 (10 lines). Telex ; 021-7962 'CESCORP'. **Auditors ;** M/s. Lovelock & Lewes.

Objects and Activities : Generation and Distribution of electrical energy. The first and second limits of the Company's Titagarh Generating Station have been brought into commercial operation, while the remaining two units are expected to go on commercial operation very soon. The Company has received technical clearance of the Central Electricity Authority for installing two units of 60/67.5 MW each adjacent to its existing Southern Generating Station at Garden Reach. The Company has taken up schemes for strengthening its transmission and distribution network including the provision of 132 K V link between Titagarh and the city at an estimated cost of Rs. 30.50 crores.

Generating Stations :

Older Stations :	
Installed Capacity	405 MW
Present Derated Capacity	32 MW
Titagarh Generating Station :	
Installed Capacity	60 MW

Receiving Stations :

Installed Capacity	680 MVA

Distribution Stations :

Number of Stations	41
Transformer Capacity	1144 MVA

LT Substations :

Number of AC Substations	1482
Transformer Capacity	497 MVA
Number of DC Substations	57
Plant Capacity	153 MW

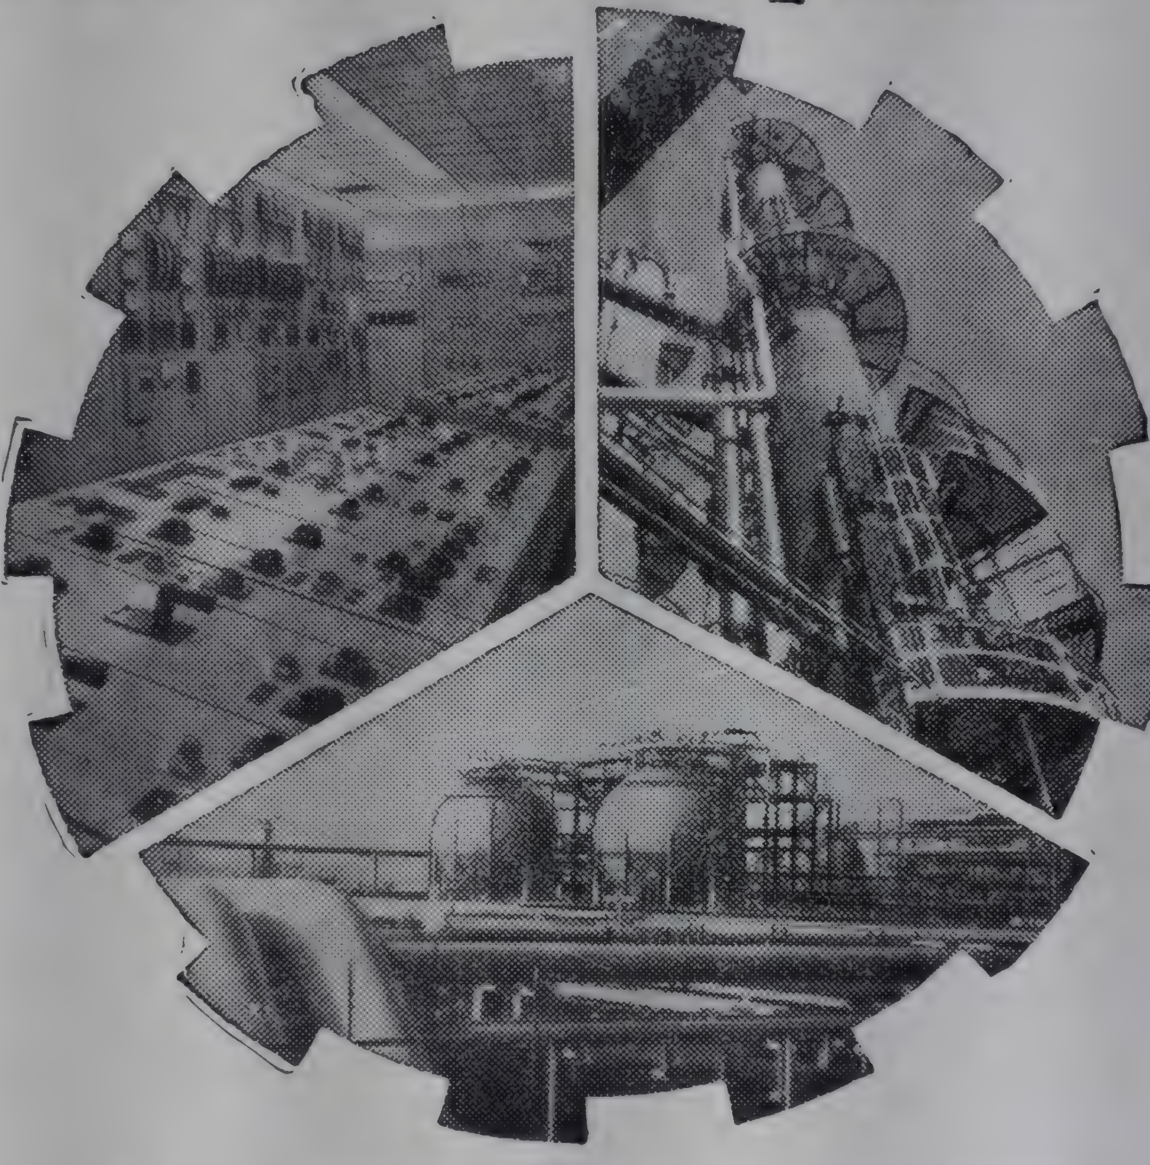
Technology...a continuous effort for development

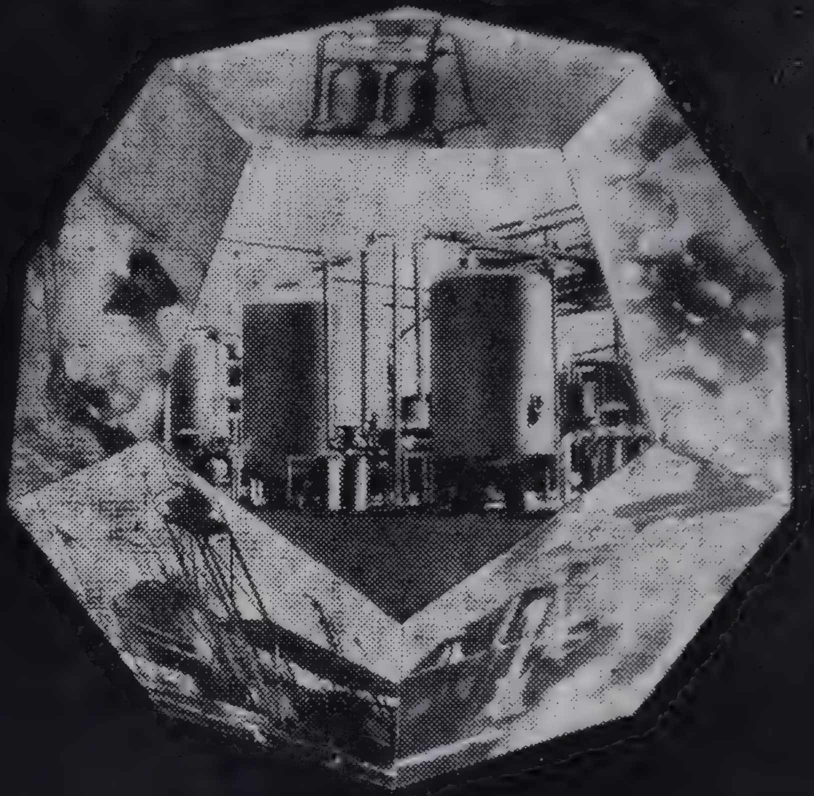


L&T provides design, engineering and fabrication capabilities in collaboration with Caterpillar, F.L. Smidth, M.A.N.— GHH, J.M. Voith, Niro Atomizer, Poclain, Serck, Struthers Wells, Swenson, Alsthom Atlantique Unelec....

L&T supplies plant and equipment and renders construction services to various industries — chemical, petroleum, petrochemical, fertilizer, cement, paper, dairy, steel, power, earthmoving....

LARSEN & TOUBRO LIMITED
where technology moves with time
P.O. Box 278, Bombay 400 038

What keeps us
ahead of others?



In a field where all are professionals what is special about us?
Our expertise borne out of nearly a century of international experience of Portals Group in water treatment and ion exchange resin technology.
Our ability to manufacture water treatment equipment and the entire range of resins to serve all industries.
Our efficient execution of turnkey projects from design to installation in record time. Our total dedication to R & D to develop ion exchange technology for the needs of developing industries.
Our exports to foreign markets in the Middle East, South East Asia, Africa and even Europe.

Every factor has that extra which elevates us above the others.

VISION 782 R

ENGINEERING

THE Engineering Industry plays a crucial role in the economic development of the country. It meets the increased needs of the capital goods, construction, power and mining sectors of the economy besides catering to our defence requirements. It is making increased efforts to achieve a high rate of industrial growth. Of late, it has emerged as an export sector too though engineering goods were not regarded as traditional export items of our country. The achievements of the engineering industry are impressive particularly in the case of export of services. Several Indian firms have won, in the face of stiff competition from giant concerns from the developed world, prestigeous contracts for turn-key jobs. The industry has set itself a very high export target of Rs. 9,000 crores by 1990-91.

History

The genesis of the Indian engineering industry can be traced back roughly to mid-nineteenth Century starting with wagon building and structural activities. However, it developed in the real sense only after independence. It gained momentum after the adoption of Prof. P. C. Mahalanobis's model of heavy capital goods-based growth strategy in the Second Five Year Plan and subsequent Plans. Since then, India has not only become self-reliant in a variety of engineering equipment, but is also exporting engineering goods. The country is currently producing power generating, transmission and distribution equipment, plant and machinery for steel, chemicals and fertilizers, cement plants sugar and paper machinery, electrical and construction machinery, machine tools, railway rolling stock, commercial vehicles, earth-moving equipment and a large number of other industrial goods and consumer durables.

The total annual output of the engineering industry is at present over Rs. 20,000 crores, which is mammoth by any standards. Nearly 6.5 per cent of the total production is exported. The annual production of the engineering industry accounts for over 30 per cent of the total industrial output of the country ; its share in the country's exports during 1982-83 was estimated at over 14%. In absolute terms, this sector of the industry employees over 2 million people. The investment in this industry is estimated at over Rs. 16,000 crores at present. Thus the Indian engineering Industry has emerged as a dynamic sector, as a leading force in the development of domestic industrial structure as well as in the field of exports.

The Indian engineering industry is engaged in selling consultancy services and technical know-how to a number of African and Arab States, as well as in joint ventures as an equal partner with developed nations in several countries. In the post-independence era, the industry not only achieved significant enlargement of production capacity, but also has attained a high degree of technical competence, sophistication and product diversification.

This impressive growth is, by and large, the result of planned industrialisation programmes under the national plans and the import-substitution efforts it engendered. It may also be mentioned that the public sector has played a key role in the development of engineering industry in India ; particularly in the fields of heavy engineering, heavy electricals, industrial machinery and machine tools. The giant engineering undertakings set up in the Public Sector have contributed a great deal to the development of core and key sectors of industry which in turn, facilitated the over-all growth of the economy.

However, despite the fact that the engineering industry has attained considerable progress since independence, it still has a long way to go, if it is to fully satisfy the country's growing requirements in this sphere. The industry will have to double its present level of production to Rs. 40,000 crores by the end of the Seventh Plan ; so also, its present volume of exports will have to be quadrupled to Rs. 5000 crores by 1990.

The industry's growth rate was most impressive during the Sixties but it slowed down considerably in the Seventies. Production indices of the different segments of the engineering industry and the index for the engineering industry as a whole have been presented in the Table below. It can be seen that barring a few exceptions, the growth rates recorded during the Seventies have been totally unsatisfactory. Although the trend showed a continuous improvement during the period 1980-82, growth rate dipped to a negligible 0.3 per cent in the year 1982-83.

The basic metal industry recorded a growth of 4.1 per cent in 1982-83 against 6.3% in 1981-82. The situation in metal products deteriorated further with a —4.1 per cent growth in 1982-83 as compared to — 0.6 per cent recorded the previous year. The sector comprising machinery excluding electricals also suffered a setback from 6.3 per cent in 1981-82 to 2.4 per cent in 1982-83. In the case of electrical machinery, there was a total reversal in performance ; from 9 per cent growth rate, it fell steep to a decline of — 6.1 in 1982-83. So was the case in transport equipment ; against a growth rate of 24.7% in 1981-82, in the year 1982-83 it could only register a dismal —2.5%. The only segment where an appreciable improvement was noticed was the group consisting of miscellaneous industries. This sector improved in performance by recording a growth of 11.2% compared to —5.7% in 1981-82.

Towards the promotion of our national objectives of increased industrial production along with distributive justice, small and medium engineering units play a significant role. From the socio-economic point of view, the key-features of this sector is its low capital intensity coupled with high employment potential. However, these units will have to make enormous efforts to achieve greater productivity and better quality products. The industry has to widen the existing infrastructure and develop facilities and forums for obtaining essential and adequate commercial information, assistance and guidance in following government procedures and to represent their cases to the government more effectively, remove the existing bottlenecks and in developing the overseas market.

AUTOMOBILE INDUSTRY

A purely indigenous automobile industry started off only in the post-independence era. In 1947, the Union Government decided to stop assemblies of foreign cars and to encourage local manufacturers. The automobile industry in India depends upon its ancillaries for the manufacture and supply of over 50% of the 5000 components that are necessary for the manufacture of every automobile.

The major groups of automobiles plying Indian roads can be broadly categorised under the following heads: heavy and medium commercial vehicles, light commercial vehicles, passenger cars, jeeps, tractors, three-wheelers and two-wheelers comprising of motor cycles, scooters and mopeds. The estimated demand for this sector and targets set by the Sixth Plan are tabulated below:

TABLE 4

Automobile Industry—Demands and Targets

Sector	Requirements by 1989-90	Sixth Plan Targets
Medium and heavy commercial vehicles ..	1,40,000	90,000
Light commercial vehicles ..	75,000	40,000
Cars ..	1,50,000	60,000
Jeeps ..	45,000	30,000
Tractors ..	1,90,000	1,20,000
Scooters ..	8,00,000	4,00,000
Motorcycles ..	3,50,000	1,75,000
Mopeds ..	8,50,000	4,25,000
Three wheelers ..	1,00,000	50,000

TABLE 5

Production Targets for Automobile Industry*

* Targets fixed by the Ministry of Industry.

Commercial Vehicles

India has emerged during the last 10 years as one of the leading manufacturers of commercial vehicles with payload ranging from 1.5 to 18 tonnes. These vehicles have not only proved their worth in the arduous operating conditions in this country, where overloading is more an exception than a rule, but have also been effective competitors to vehicles from other producers in Taiwan, Sri Lanka, Nigeria, Zaire and other countries.

TABLE 6

Output of Commercial Vehicles in India

	Light	Medium and Heavy	Total
1974 ..	6,030	35,693	41,723
1975 ..	6,314	36,520	42,834
1976 ..	8,099	38,717	46,816
1977 ..	7,936	33,673	41,609

1983 ..	26,500	60,500	87,000

Source : *The Hindu*—Survey of Indian Industry, 1983.

There was a marked upswing in the production and sales of commercial vehicles in the period 1978-81, giving the impression that growth in sales would remain uninterrupted. Major producers such as TELCO and Ashok Leyland made huge investments on expansion and modernisation schemes and others such as the Hindustan Motors embarked on programmes for upgrading technology for raising capability. All these were expected to result in a spectacular growth in annual capacity to over 1.72 lakh units from the present level of 1.1 lakh units.

The developments in 1982-83, however, came as an anti-climax. It is now estimated that the output of heavy and medium duty commercial vechicles may be only around the level of 1982. The output of vehicles in this category, having reached a record figure of 65,852 units in 1981, slid to 61,813 units in 1982 and further to 60,500 units in 1983. It may be seen that there was a small drop in output in 1983, despite a pick up in sale in the closing months ; it is reckoned that in the absence of adverse developments, the figure should well have been 80,000 units during the year.

The sluggish off-take position prompted the Government to grant concessions in regard to excise duty on commercial vehicles, tyres and storage batteries. Thus there were signs of a slow recovery in certain segments of the economy during the last quarter of 1982. However, producers of commercial vehicles are not inclined to be optimistic about the immediate outlook. The recession of 1982-83 has been particularly felt by heavy and medium duty commercial vehicles and tractors. The operation of manufacturers of light vehicles and two-wheelers, however, has not been impaired. Indeed, demand for this category of vehicles has been steadily rising. The vastly expanding capabilities of automobile and ancillary industries have, in fact, been the redeeming feature in the growth of automobile industry in the last couple of years. Recognising the role of personalised transport, the Government of India liberalised the import of technology ; several units seized the opportunity immediately and took advantage of the new policy to upgrade their technology so as to satisfy consumer demand for superior products. These developments have placed a responsibility on ancillaries too, to modernize, since they now have to cater to the requirements of new auto units manufacturing commercial vehicles, cars, motor cycles and mopeds in technical collaboration with Japanese, West German and French concerns.

Light commercial vehicles are in great demand and the growth in output in this category has been quite encouraging. Mahindra and Mahindra have started a new disel engine project with technical collaboration of Peugeot of France and is also modernizing its Nasik unit. Standard Motors is diversifying its product range, and a new 3-tonne truck has been successfully marketed, while the capacity is to be doubled to 12,500 units in the next few years. Also Toyota and Nissan Motors of Japan, among others, have entered into collaboration arrangements with Indian concerns for the manufacture of light commercial vehicles.

Passenger cars

The first passenger car plant of India came up on the outskirts of Calcutta in the early 1940s and in the next few years two more plants came up at Bombay and Madras. But in subsequent years, there was no induction of new technology in the passenger car sector and production stagnated. It took nearly 3 decades thereafter for the passenger car industry to take its next step forward. The Central Government decided to take up the manufacture of a people's car in the public sector with Japanese know-how and financial participation. Maruti Udyog Ltd., was incorporated in early 1981 with collaboration arrangements with Suzuki Motor Co. Ltd. of Japan, Initially, the car, in its entirety is being imported from Japan and assembled locally at the factory at Gurgaon. Maruti and Suzuki have signed a licence agreement for transfer of technology as also a joint venture agreement giving Suzuki the right of equity participation between 26-40 per cent. Producing a range of modern, fuel efficient vehicles with imported know-how, the launching of Maruti signifies an era of new technology and new models. Taking advantage of the liberalised import policy, other existing manufacturers have also launched on new improved models with foreign assistance. Thus, transformation is in the offing in the entire automotive industry.

In 1984-85, its first full year of production, Maruti is expected to roll out 40,000 vehicles. The figure will increase thereafter and the mass production technology is expected to enable a turnout of 1 lakh vehicles by 1988. The company proposes to start production of vans and pick-up trucks from the lst quarter of 1984 and the beginning of 1985 respectively. Hindustan Motors has already marketed Contessa, a new luxury model with the existing Ambassador engine. It has also entered into an understanding with Isuzu Motors of Japan for upgrading technology and achieving greater fuel efficiency. Premier Automobiles is also coming up with a new car project and negotiations are under way with several Japanese and European firms for collaboration to manufacture a very modern and highly fuel-efficient engine. Standard Motors of Madras, which has discontinued production of its existing Gazel model, proposes to produce Austin Rover saloon cars at its Vandalur Works.

The 2000 cc engine of the Standard one-tonne truck is to be utilised, with modifications to suit the requirements of the new Standard Rover car. The phased programme would start with assembly of knocked-down kits shipped from U.K. with progressive increase in indigenous content.

With all the existing manufacturers making serious attempts to upgrade technology, a competition for attracting consumers is in the offing. A clear picture of the trend would be perceptible only when all these plans take concrete shapes and car-users indicate their preferences, based upon price differentials, utility or other consideration.

Two-wheelers

Two-wheelers are ideally suited to Indian economic conditions as they represent personalised modes of transport with low costs and low fuel consumption thus meeting the requirements of the vast middle and lower-middle income brackets. Powered two-wheelers are extremely popular in India, with scooters enjoying marked preference in metropolitan areas and motorcycles being greatly used in the rustic road conditions of smaller towns and rural areas. Mopeds are selling well in both urban and rural markets. Production of mopeds has taken a phenomenal leap from 40,000 in 1978 to 3 lakh units by 1983.

The late Seventies and the early Eighties witnessed a tremendous growth in the demand for and production of two-wheelers. Prior to that, for a long time, Government had not accorded the priority status due to the two-wheeler industry. New licences and foreign collaboration approvals were not forthcoming to large industrial houses. Consequently, there was a large demand-supply gap and order books of manufacturing units showed very long waiting lists, with an inordinate time lag between booking and delivery. Even mopeds, which were relatively less popular during the Seventies, had huge order backlogs. The automobile scenario, under tight reins of regulation witnessed a sudden rejuvenation and thrust forward with a new liberalised policy for both capacity expansion and technological upgradation through foreign collaboration. The following table indicates the sudden spurt in production trend in the eighties as represented by the figures for 1983.

TABLE 7

Production Trends in Two Wheelers

Source : Venu Srinivasan : 'Two wheelers enter Dynamic Phase' as published in the *Hindu* Survey of Indian Industry, 1983.

There is no doubt that tremendous potential exists for two-wheeler industry in India. This is evident from the spate of collaborations that Indian manufacturers have secured from some of the world leaders in the industry. Yamaha, Japan is collaborating with Escorts for the manufacture of 100 cc motor cycles while Zundapp, West Germany has offered its technology to Enfield India for motor cycles upto 175 cc as well as 50 cc mopeds. Suzuki has made an agreement with Indian motor cycles for the production of mini-motor cycles and mopeds. Lohia Machines and A.P. Scooters have secured arrangements with Piaggio of Italy for scooters while Honda, Japan is collaborating with Kinetic Engineering for scooters and with Hero Majestic for scooters, mopeds and motor cycles. Chamundi Mopeds, Moped India and Scooters India will be manufacturing mopeds with technical assistance from Peugeot, France, Motobecane of West Germany and Punch of Austria respectively and Kelvinator India is importing scooter and moped technology from Agrati-Garelli of Italy.

The Indian two-wheeler scene will, therefore, be witnessing the advent of superior models and technology and the creation of a highly competitive industrial climate with a wide range of vehicles to choose from. It is also believed that there may be substantial excess capacity in respect of two-wheelers by the turn of the decade. The new licenses granted, would create a capacity of three million by then, while demand is expected to be around two million only. In the face of fierce competition, only those who can provide the most fuel-efficient and reliable vehicles, backed up by good after-sales-service will be able to survive.

Auto Ancillaries

The expansion path of the auto ancillary industry in India has been closely parallel to that of the automobile industry. The start was made roughly two decades ago with the manufacture of simple parts. About 200 auto ancillary units are operating in India with a total installed capacity estimated at Rs. 820 crores at current prices. About 60 per cent of the production, however, is accounted for by twenty major units.

Just as in the case of automobile manufacturers, ancillary manufacturers are also generally operating under tie-up arrangements with western manufacturers. The technology has been absorbed well and an indigenous base has been built up. New ancillaries are being exported, though the volume is not very significant, or even consistent. Exports reached a peak of around Rs. 60 crores in 1977-78, but dropped thereafter. The annual production value of auto ancillaries which was less than Rs. 20 crores in 1960-61, has grown to around Rs. 642 crores in 1982-83.

Source : 'Economic Scene', April 1984.

About 50 per cent of all vehicle parts are being supplied by the ancillary industry as of now. The expansion phase currently underway in the automobile industry would, therefore, imply a similar expansion in the ancillary industry. From 1985 onwards, the ancillaries will have to produce output worth over Rs. 1000 crores. This would require additional investment of over Rs. 600 crores in plant and machinery besides routine requirements for replacement, wear and tear. This apart, new policy of allowing liberal import of technology in the automobile industry would necessitate a concomitant process of technology import for the ancillaries too.

The automobile ancillary industry will now have to gear itself to meet the exacting standards of the emerging new vehicles with foreign collaboration. The ancillary units too, have drawn up many expansion/modernization programmes and several of these are under implementation. Heavy expenditure is being incurred on these projects. These new facilities are aimed at integrating and diversifying manufacturing operations and the outlay in the next 3 or 4 years may be around Rs. 300 crores. Major ancillary units have now to take note of the requirements of producers engaged in the manufacture of commercial vehicles, cars and two-wheelers in technical collaboration with Japanese, West German and French interests. Some of them have already completed arrangements for producing wheels, batteries and tyres and there is a general confidence in the industry circles of meeting the auto requirements as the process of indigenisation gathers momentum.

Key ancillaries such as ignition systems, carburettors, suspension systems, pressure die-cast components, precision forgings and batteries, have now come under tremendous pressure. To them, modernization is imperative in terms of both process and product technology for meeting collaborators' specifications. The Government is also alive to the needs of creating fresh capacities in these areas. Entrepreneurs are being actively encouraged to set up units with foreign collaboration. The new developments will initiate a wave of repurcussions in the distribution and service networks which will have to produce an effort of great magnitude to show a much higher level of customer service, in the face of stiff competition. The need of the hour is for the development of a new breed of entrepreneurs to provide efficient customer-oriented service, backed by aggressive marketing.

Manufacture of auto ancillaries has to cover a wide variety of components within each product group. For instance, a manufacturer producing two lakh starters a year will have to contend with 50 different types of starters. The spate of new collaboration arrangements will add to the multiplicity, since products meant for similar application in different brand of vehicles will have to be incorporated with different design-features as per the specifications of each collaborator/manufacturer.

Machine Tools

The Indian machine tool industry started with machine tools designed by foreign collaborators during the 1950s or earlier. In the Sixties, the industry added to its range, highly productive machines such as copying lathes, automats, gear-cutting machines etc., but this again was through collaborations. By 1970, the Indian industry had sufficiently mastered machine-building technology and the indigenous manufacturers have, by and large, been able to meet over 70% of the domestic requirements. By 1978, this figure had risen to 86%. The table below gives data relating to production, imports, exports and consumption of machine tools.

TABLE 9

Domestic Production, Import, Export and Internal Consumption of Machine Tools

(Rs. in Crores)

Year	Production	Growth (%)	Imports	Exports	Domestic Consumption	Share of production in consumption (%)
1955	0.68	..	5.29	..	5.97	11
1960	5.86	41	20.94	..	26.80	22
1965	25.48	21	34.93	0.14	60.27	42
1970	37.23	40	18.30	2.79	52.74	71
1975	104.03	18	44.05	8.18	139.90	74
1976	116.85	12	44.49	16.92	144.42	81
1977	109.57	6	35.72	13.66	131.63	83
1978	121.05	10	40.00	20.50	140.55	86
1979	155.82	29	78.77	21.17	213.42	73
1980	185.95	19	104.86	20.85	269.96	69
1981	234.21	26	107.25	23.25	318.21	74
1982	266.51	14	110.00	24.19	352.32	76

A disturbing feature that may be noted from the table is that since 1978, domestic production as a percentage of internal consumption has dropped after touching a peak in 1978. The factors chiefly responsible for this were inadequate production and the industry's inability to catch up with the technological advancement in its products. It is true (as may be seen from the table) that in terms of money value, the industry had registered annual growth rates of 29%, 19%, 26% and 14% in the period 1979-82. But these figures are based on nominal value of output and after adjustments for price rise, these figures would be much lower. Secondly, the technological gap has naturally resulted in end user industries requiring high precision machine tools, having to resort to imports for their requirements. As a result, the import of machine tools jumped from Rs. 40 crores in 1978 to Rs. 110 crores in 1982.

Government measures

A welcome policy change towards giving a boost in the machine tools production was the inclusion of machine tools in Appendix 1 of the industrial policy announced in February 1983 and as redefined in April 1983. This has thrown open machine tools manufacture to MRTP and FERA companies, provided the particular item is not reserved for small scale industries.

In addition, the import policy of 1983-84 was designed to help machine tools production. The provisions included (1) that small scale units which exported at least 25% of their output would be allowed to import prototypes upto Rs. one lakh ; (2) all scheduled industries will be allowed the facility of import of drawings and designs once in a year for value not exceeding Rs. 10 lakhs ; (3) a Technology Development Fund was created to cover foreign exchange requirements for import of balancing equipment, technical know-how, foreign consultancy services, etc.

All these steps are designed to encourage fresh investment, expansion and modernisation in the domestic machine tool industry. Projections for machine tool production have been tabulated.

Engineering Exports

Our engineering industry has been making considerable progress on the export front. From around Rs. 21 crores in 1965-66, the value of exports of engineering goods rose to over Rs. 105 crores by the end of the Sixties and continued to show an encouraging trend during the Seventies. The following table illustrates the export performance of Indian engineering industry.

TABLE 11

Production and Export of Engineering Goods

Year		Production	Exports	Export as per centage of production
1970-71	..	3,474	116	3.3
1973-74	..	6,103	193	3.2
1974-75	..	7,587	349	4.4
1975-76	..	9,327	408	4.4

1982-83	..	N.A.	1,250	..

Source : ' Economic Scene ', Nov. 1, 1983.

A vigorous export promotion drive was launched in the face of the oil crisis, when import costs escalated and, therefore, exports urgently needed to be stepped up. During this period, engineering exports witnessed a great spurt, thanks to various promotional measures. In the period 1971-75, the value of exports more than trebled and nearly doubled in the next three years. By the year 1982-83, the staggering figure of Rs. 1,250 crores was reached. The engineering industry has now emerged as one of the leading foreign exchange earners of the country.

According to studies undertaken by the Association of Engineering Industries, exports of engineering goods are increasing at a faster rate than our total exports. While exports of engineering goods showed a growth rate of 22% per annum during the twelve year period ending 1982-83, our total exports rose only by 14.5 per cent per annum in the same period. The share of engineering exports in India's total exports has thus maintained a continuous rising trend from 7.6% in 1970-71 to 13% in 1980 and further to 13.5% in 1982-83. However, in the last 2 years, there has been a stagnation in the level of exports. Provisional estimates for the year 1983-84 put the figure at Rs. 1,170 crores against Rs. 1,250 crores in 1982-83, which is actually a decline. For the year 1984-85, a target of Rs. 1,500 crores had been originally set. However, since the Commerce Ministry felt that this figure does not reflect the true potential of certain sectors, the target has been revised upwards to Rs. 1550 crores. It was felt that export from computer software and allied areas could be stepped up substantially. Five 'thrust countries' have been identified by the Engineering Exports Promotion Council for 1984-85 which are targeted to account for exports worth Rs. 670 crores. These are : US (Rs. 180 crores); USSR: (Rs. 250 crores) ; Iran (Rs. 100 crores); Iraq (Rs. 80 crores), and the UK (Rs. 60 crores). The Council has also identified nine growth potential items for which export targets have been revised following suggestions from the Commerce Ministry : Software (Rs. 40 crores); bicycle & parts (Rs. 70 crores) ; automotive parts (Rs. 65 crores) ; commercial vehicles including jeeps (Rs. 75 crores) ; steel pipes and tubes (Rs. 50 crores) ; hand tools (Rs. 60 crores), industrial fasteners (Rs. 20 crores) ; fencing materials—structurals (Rs. 20 crores) ; and public works castings (Rs. 70 crores). The total export target for all these items is Rs. 470 crores.

A target of Rs. 6000 crores has been set for engineering goods exports by 1990-91. This has been set in the context of estimated world engineering exports to the tune of $ 750 billion for the same period. Fulfilment of this target calls for an annual average growth rate of 26%. Even though 30% and 25% growth rates have been achieved in the Sixties and Seventies respectively these were from a much smaller base. While it was relatively easy to grow from Rs. 5 crores in 1956-57 at the above mentioned rates, moving from Rs. 1170 crores to Rs. 5500-6000 crores between 1983-84 and 1990-91 calls for a stupendous effort. It is, however, not impossible if a satisfactory growth of engineering industry is maintained along with the required level of export orientation. The export target of around Rs. 6,000 crores for 1990-91 is linked to domestic engineering goods production of value Rs. 30,000 crores, assuming that roughly 20% of the total prodcution would be exported.

Project Exports

Project exports are the main plank of the strategy drawn up by the EEPC for achieving the export targets set for the industry. Against our engineering exports of Rs. 1,060 crores in 1981-82, project reports totalled Rs. 570 crores.

Project exports are doubly beneficient. Besides the direct foreign exchange earnings by way of labour management skills and so on, they generate further exports, because orders for equipment are generally given to the country where the consultancy firm is based.

Broadly, project exports fall under the following four categories : (1) Turnkey projects viz. supply of services such as design, erection, commissioning and supervision of the facility for the client, besides the supply of goods ; (2) Engineering contracts involving the supply of services as for instance, design, erection, commissioning or supervision, including the capital equipment ; (3) consultancy services—the preparation of techno-economic feasibility studies, project reports, design and technical consultancy as well as advice on purchase and finance and (4) Construction contracts.

Though India has been in the field of project exports since the mid-Fifties, its magnitude was insignificant for quite sometime. Our performance in the field can be considered satisfactory, in view of the fact that the real and effective start was only during the last decade. The number of overseas contracts secured by Indian engineering firms rose from 40 in 1975-76 to 104 in 1977-78. The number dropped steadily to 64 in 1980-81 and further to 48 in 1981-82. The value of bids secured rose from Rs. 232 crores in 1975-76 to Rs. 744.8 crores in 1978-79 and it hit a high water-mark of Rs. 1134.7 crores in 1980-81. But in the first eight months of 1981-82, the total dropped again to just Rs. 570 crores.

During the earlier phase, Indian contractors went in for projects of lower values, generally upto Rs. 25 crores. In 1975-76, the share of bids of value above Rs. 25 crores was just 11% of the total. By 1980-81, the share of projects worth Rs. 25 crores and above had risen to 22%. Bids worth less than Rs. one crore formed just 9% in 1980-81, whereas they had contributed to 33% in 1975-76.

India's project exports can be put into 2 major groups; (*a*) supply of turn-key projects; (*b*) construction contracts. Supply and turnkey projects have not been showing a very impressive trend, whereas construction contracts have been performing better as may be observed from the tabulated figures.

TABLE 12

Project Exports—Overseas Bids secured by Indian Exporters

(Rs. in Crores)

Year	Supply of turnkey		Construction		Total	
	No.	Value	No.	Value	No.	Value
1975-76 ..	38	189.0	2	43.3	40	232.3
	(76)	(415.0)	(9)	(458.0)	(85)	(873.0)

	(226)	(2870.0)	(203)	(4257.0)	(429)	(7127.0)
1980-81 ..	17	73.0	47	1062.0	64	1135.0
	(158)	(2889.0)	(160)	(4656.0)	(318)	(7545.0)
1981-82* ..	17	248.0	31	322.0	48	570.0
	(110)	(1809.0)	(95)	(3303.0)	(205)	(5112.0)

Note : Figures in brackets indicate number and value of project export bids cleared by the working group in each year.

* Data for July-February only.

Though India's project exports have been successful, it is felt that the level of exports do not match our capabilities. India has a vast pool of trained manpower. According to estimates India has well over 250 consultancy firms which can offer over 5 million man-days a year, for projects right from conception and design to execution, supervision and management thereafter. Thus, in relation to the potential and in the background of the total number of contracts bagged by world bidders, the contracts secured by Indian project exporters has not been impressive.

Also, over the past one year, international developments have been proving unfavourable to project exports. The falling oil prices have affected the revenue and therefore the development expenditure of the petroleum exporting countries of West Asia. There were cut-backs in the expenditure of South-East Asian and African nations too, which were suffering from adverse terms of trade. The problem will be compounded by the competition from contractors currently operating in Latin American countries whose debt problems would hamper their aid-financed development programmes. Thus, the major markets for project exports seem to be weakening in potential. Our project exports during 1982-83 were therefore hit hard both in terms of fresh orders and payments for orders fulfilled. In this context, the recent move to set up an institute for project exports should be welcomed.

STEEL INDUSTRY

Steel is one of the basic and key industries in the national economy of any country. It forms the very core of the engineering industry. Its utility spans the primary, secondary and tertiary sectors—Steel is used as the basic material in the manufacture of tractors, power-tillers and other farm machinery and food processing plants; in the building of factories, plants and industrial machinery as also in transportation tracts, railways, ships and in power and communication links. The rapid expansion of steel capacity is therefore the logical pursuit of any programme of industrialisation.

History

It is a historical fact that India occupied a pre-eminent position in iron and steel making in the days of yore. However, the era of modern steel industry in India began only in 1907 with the launching of the Tata Iron and Steel Co. in Jamshedpur, Bihar. This plant went into operation in stages by 1911-12. In 1919 the Indian Iron and Steel Co., established a unit in Burnpur, near Asansol in West Bengal. In 1923, the Mysore Iron and Steel Works, the first public sector effort, commenced operations in Bhadravati in Karnataka. In the pre-independence days, these three units were the main steel producers in the country turning out 1.7 million tonnes of pig iron and a million tonnes steel ingots per year.

With the launching of the plan era, the Industrial policy Statement of 1956 placed Iron and Steel in Schedule A, which meant that all new units in the industry would be set up only by the Government; the private units then in existence, would not be barred from expanding their capacities. As the policy-makers decided to accept the Mahalanobhis model for development, an all-out effort was made during the Second Plan period to lay a strong industrial base. In line with this, three integrated steel plants, each with 1 million tonne steel ingot capacity were set up in Rourkela, Bhilai and Durgapur. These plants came into operation in stages between 1956 and 1962. During this period, TISCO and IISCO had doubled their capacities and the total ingot steel capacity rose to 6 million tonnes. By 1973, this capacity had further risen to 8.9 million tonnes.

With the objective of bringing about a co-ordinnated development of all the major steel units, the Steel Authority of India Ltd., was set up as a holding company on 24th January 1973. It was later restructured with the passing of the Public Sector Iron and Steel Companies (Restructuring) and Miscellaneous Provisions Act, 1978. The domain of the SAIL is not merely confined to the development of the steel industry but extends over its major inputs such as coking coal and iron ore. The SAIL is responsible for the working of the five integrated steel plants as also the Salem Steel Ltd. and has 3 subsidiaries viz. IISCO, MSTC and Bolani Ores. Its erstwhile subsidiaries MECON, HSCL, NMDC, Mandovi Pellet Ltd. and the POIL have been put under the direct charge of the Ministry of Steel and Mines.

With an investment of over Rs. 2500 crores, the SAIL is a gigantic industrial organisation controlling all the steel plants in the country including an Alloy Steel Plant. It also holds shares in the Visvesvaraya Iron and Steel Ltd.; (formerly MISCL) which is owned jointly by the Government of India and the Government of Karnataka. The SAIL also represents the investment interests of public financial institutions in the iron and steel and allied industries. Besides controlling and directing the operations of the steel plants, the SAIL also undertakes marketing of steel and assists the Government of India in bringing about integrated planning and development of the steel industry in India.

The Bhilai Steel Plant, set up with Russian collaboration, is equipped with seven blast furnaces and 10 open hearth furnaces and has a total capacity of 3.16 million tonnes of saleable steel. Expansion of this capacity to 5.5 million tonnes is under Government consideration. The plant at Durgapur was built under an agreement signed with a British consortium in 1956. It is equipped with four blast furnaces and one 120 tonne basic open hearth furnace, and has a capacity to produce 1.24 million tonnes of saleable steel. Under collaboration arrangements entered into with Krupp-Demag combine of West Germany, an integrated steel plant was set up in Rourkela. This plant is now equipped with 4 blast furnaces and four 80-tonne basic open hearth furnaces with a capacity to produce 1.2 million tonnes of saleable steel. The Bokaro Steel Plant is equipped with five blast furnaces and is currently going through an expansion programme. Plans are afoot for a further expansion of capacity to 4.75 million tonnes.

Subsequently 3 new projects were taken up. These were the Salem Steel Plant in Tamil Nadu, Visakhapatnam Steel Project in Andhra Pradesh and the Vijayanagar Steel Project in Karnataka. Of these, the Salem Plant was commissioned in 1981 and work in respect of Vizag is in progress, while project reports for Vijayanagar are under study. It was also decided to set up a second port-based steel plant at Paradip and the project was handed over to a European consortium headed by Davy Mckee of the U.K. for construction on turn-key basis. The first stage of 1.5 million tonne capacity was to be completed at an estimated cost of Rs. 3000 crores. Unfortunately, however, the fate of this plant still hangs in the balance. Recent reports indicate that the location of this plant may be shifted 120 km inland on meteorological grounds. Decision regarding this is yet to be finalised.

Another milestone in recent times was the commissioning of the Sponge Iron Plant at Kothagudem in Andhra Pradesh. It offers a new possibility of producing steel through an unconventional process, which would be of a better quality than that produced by electric arc furnace from ferrous scrap. License has been granted for setting up a large sponge iron plant in Orissa and a proposal for a similar plant in Bihar is also under consideration.

The Alloy Steel Plant in Durgapur has embarked on an expansion programme, the first stage of which has been completed already. The second expansion has also been approved. An increase in capacity from 1,60,000 tonnes to 2,60,000 tonnes is envisaged. It is also expected to improve the viability of the plant and provide an indigenous supply source for hot-rolled stainless steel bands for the Salem Steel Plant.

With the failure of Iran to meet its contractual obligations to lift iron ore concentrates, it was feared that the massive Kudremukh iron ore project may run into a crisis. However, decision on the construction of a multi-crore pelletisation plant at Mangalore has brought welcome signs of relief. With the implementation of this project, ore concentrates from Kudremukh can be pelletised at Mangalore and exported. A contract has been signed with Romania for the export of concentrates in exchange for building the pellet plant.

At Jamshedpur, the TISCO has taken up a Rs. 200 crore programme for modernising its fifty-year-old facility, on completion of which the plant's capacity would rise to 1.74 million tonnes of saleable steel. A revamping of the Indian Iron & Steel Company is also under active consideration. At present the total installed capacity of the Indian steel industry is 14.6 million tonnes of ingots. This is to be increased to 25 million tonnes by 2000 A.D., according to present plans. Almost all the steel plants are evolving their own modernisation programmes.

However, at the present juncture the industry is passing through a rough patch and there are no definite signs of recovery. Plans for expansion are running into difficulties with cost and time overruns, and production and off-take have become sluggish. It appears that there are frequent variations in demand and these are throwing steel manufacturer's plans a little out of gear. These have forced them to launch an aggressive marketing drive and to attempt to tailor their product-mix to match the preferences of users.

Ingot production from the integrated plants has been stagnating between eight and nine million tonnes for several years, with expansion schemes in some plants yet to contribute to increased availability in a big way. The projection that by 1989-90 ingot steel capacity would rise to over 20 million tonnes and saleable steel capacity to over 16 million tonnes seems elusive.

The production target for hot metal in 1982-83 was set at 11.21 million tonnes from an anticipated installed capacity of 13.14 million tonnes from the six integrated steel plants. Actual output was, however, only 9.49 million tonnes. Ingot output from these plants in 1982-83 was 8.62 million tonnes from an installed capacity of 12.9 million tonnes. This has in turn yielded only 7.29 million tonnes of saleable steel.

It may be noted that in 1982-83, the output of hot metal was slightly lower than that for the year 1981-82 ; the production of saleable steel remained around its previous year's level, though additional rolling capacity was added during the year. The saleable steel-making capacity in the integrated plants in 1982-83 had gone up to 9.24 million tonnes from 8.7 million tonnes the previous year. The target set for the integrated plants for 1983-84 in respect of hot metal was 10.7 million tonnes. This, in turn, would yield 9.58 million tonnes of ingot and 7.59 million tonnes of saleable steel. However, in the first eight months of this year, only 3.9 million tonnes of saleable steel was produced, a rate that definitely would not be sufficient to fulfil the year's target. The major contributory reasons to this state of affairs is the fluctuation in quality of coal, its high ash content and shortage of power. Also the stagnant trend in output from the integrated plants can be attributed to any significant increase in capacity in recent years.

The encouraging feature in recent times is the increasing contribution by the numerous mini-steel plants, with their electric arc furnaces. These plants accounted for 2.03 million tonnes of ingot in 1982-83 and are expected to supply 2.35 million tonnes in 1983-84. The target set for integrated and mini-steel plants together, for 1983-84, is 11.93 million tonnes of ingots equivalent to 9.59 million tonnes of saleable steel. A third source of steel supply is canalised imports by the SAIL. About 1.24 million tonnes of steel and five lakh tonnes of pig iron for use in foundries were imported in 1982-83. In addition, certain items can be freely imported under the Open General Licence. However, an anamolous situation developed during the first three quarters of 1983-84 in that, despite the fact that production was short of the target, there was considerable stockpiling. The integrated plants, between them had an unsold stock exceeding 1.1 million tonnes.

Thus, there is a new thinking in terms of diversifying the product range to suit user-needs of various sectors. The product-mix consists of blooms, slabs, billets, bars, light medium and heavy structurals, rails, sleepers, wheels and axles, plates, hot and cold-rolled sheets and strips, galvanised and tin-plated sheets and electrical sheet metal.

The marketing problem faced by the SAIL, has forced it to explore overseas markets. However, since almost all the major steel producing nations are vying for the international market and India cannot compete with them on equal terms or generate sustained exports (its exports are limited to glut periods in the domestic market), the export efforts cannot be expected to meet with overwhelming success. Thus, instead of indulging in ad-hoc export promotion measures during irregular phases, more concentration on the needs of the domestic market would be highly advisable. At present, India does not manufacture many special steels available elsewhere. Therefore, Indian consumers have to look to the overseas markets for such categories of steels. Also imported steel is often less expensive than Indian steel. Thus our steel production needs further reorientation towards producing the right package as suited to customers' requirements and producing them at competitive prices incorporating cost-efficiency in production processes.

During the Sixth Plan period, it was therefore planned that modernising, expansion of existing facilities and achieving maximum capacity utilisation should receive top priority. Expansion of steel capacity in the country in the near future is expected to result mainly from higher productivity as well as expansion of Bhilai, Bokaro and the TISCO plants. The Vizag plant has also got into its stride, although the benefits of the huge investments being poured into it now, will be felt only after a definite time-lag. Modernisation of the Durgapur plant is yet to be completed ; increasing capacity at Rourkela and accelerated work on implementation of Vijayanagar plant, now in its first phase, along with steady expansion in Vizag are imperative.

A target of 25 million tonnes of ingots has been set for 2000 AD. This can, at best, be described as modest, but to achieve even this, a perspective plan incorporating a long-term outlook over the Seventh and Eighth Plan periods is necessary. The tardy expansions of the integrated steel plants have not made much adverse impact because of the offsetting influence from the mini-steel plants making a sizable contribution of over 2 million tonnes annually. It can be stepped up further to 3 million tonnes if scrap and power are adequately available.

For all the sluggishness in demand, at present, a spurt in the days ahead cannot be ruled out, since the economy is passing through an important phase in its development. Thus, efforts at reviving the Burnpur plant, increasing the capability of Rourkela plant and the construction of modern facilities at Vijayanagar, as well as at two other locations, should be pursued with all the vigour.

Pricing

For a long time, the price of steel was fixed by the Government, evidently at rates lower than those desired by the steel plants. This had been affecting the financial performance of the steel plants, since the prices fixed bore little relation to costs incurred. In February 1981, the Government took an initial step towards liberalisation, by deregulating ceratin categories of steel. This was followed in April 1982 by a deregulation of all the remaining categories too.

However, the steel plants could not enjoy the full benefits of their newly-acquired freedom in price fixing as it came at a time when the market was in a grip of a recession. However, the situation improved in the last quarters of 1983-84 and thereafter volume of unsold stocks came down considerably. Still there are limitations to using price adjustments to improve profit performance. The outgo on account of cost of inputs, maintenance, depreciation and interest is huge and affects the finances of the Public Sector steel plants to a great extent.

Plan allocations

According to available reports after the Seventh Plan approach paper was endorsed by the National Development Council, an additional capacity of 8.4 million tonnes of ingots may be proposed in the plan document. The financial allocation required for this capacity growth may be as much as Rs. 18,700 crores, inclusive of unfulfilled allocation of Rs. 1800 crores in the Sixth Plan. Allocations in the previous plans are as below ;

TABLE 13

Outlay for the Steel sector under the Five Year Plans

Plan		Allocation (Rs. in Crores)
First Plan	..	33
Second Plan	..	350
Third Plan	..	670
Fourth Plan	..	1,121
Fifth Plan	..	2,237
Sixth Plan	..	4,000

The estimated outlay for the Seventh Plan period has been worked out on the basis of an average investment cost of Rs. 20,000 per ingot tonne. Official estimates may be substantially less, since the investment cost of the Daitari plant has been based on Rs. 10,000 a tonne. It is felt this would be an under-estimate by the time the plant commences commercial production.

Escalation of capital costs has been a regular feature in the Indian steel industry. Delayed investment decisions and delayed project completion have been playing havoc with capital costs. There has been a vicious circle of projects for capacity creation/expansion being held up for want of resources using capital costs as a result of delayed investment decisions and the cost escalation, in turn creating a shortage of investible funds and further delaying investment decisions.

Outlook

At this juncture, even assuming that the steel plants are able to operate at an average investment cost of Rs. 10,000 per ingot tonne during the Seventh Plan period, the cost of saleable steel turned out, will still prove to be uneconomical for steel-based industries, especially for export-oriented units. Therefore, these units will have to import more steel in the interests of competitive strength in the international market. This will run counter to the Seventh Plan objective of creating an additional 8.4 million tonne capacity. If the government aims at over-all self-sufficiency in steel and goes ahead with the programme of additional capacity creation, the new plants will have to sell their output at a loss. This will inevitably call for heavy government subsidy.

ELECTRONICS INDUSTRY

Present status

The World electronics scene has undergone a transformation in the last two decades. Electronics has now acquired the status of an all-pervasive industry, since its applications are so varied that they are found in practically every field, in consumer and capital goods. However, in the international context, the Indian Electronics Industry is tiny in size and comparatively obsolete in technology. The impact of technological innovations and growing markets for electronics has made it possible for world leaders in electronics to supply goods and services of far superior quality at constantly falling prices. This has led to a veritable explosion of new products and processes. The chip technology that has revolutionised the industry is on its way towards a total or near total substitution of conventional electro-mechanical products and processes. These developments are yet to percolate fully to India. The electronics industry may be broadly grouped into electronics equipments sector and components sector. The former group consists of 4 sub-sectors viz. (1) consumer electronics, (2) communication and broadcasting equipment, (3) aerospace and defence equipment and (4) computers, control and instrumentation.

Growth of Electronics in India

The Electronics Industry in India began in the Fifties with the manufacture of radio receivers by a few units in the private sector with imported components. By the mid-1950's, some radio manufacturers started making some of the components for their own use. It was only during the Sixties that a modest base developed for the manufacture of components and the Indian Electronics Industry was dominated by consumer goods during this period. In 1966, the Bhabha Committee on Electronics in India in its Report emphasised the importance of professional electronics and a strong component base for both techno-economic and strategic reasons. These recommendations were acted upon to a considerable measure, and a basic infrastructure for components was created by close of that decade. The progress in professional electronics, however, was not quite satisfactory.

A separate Department of Electronics (DOE) was set up by the Central Government in 1970 to give fillip to the industry's development. This was followed by the Constitution of the Electronics Commission (EC) in 1971. These bodies have been entrusted with the task of co-ordination among different Government departments and ministries such as communication, defence, railways, information and broadcasting industry, atomic energy and preparation of plans aimed at creating capacities in different sectors. The industry has since grown in terms of total value and has also witnessed radical changs in respect of diversification of product range, areas of application, higher exports, growth of small scale sector and geographical spread.

The production of electronics goods in India has grown by leaps and bounds since 1970. Between 1970 and 1982, the total growth recorded by the industry was of the order of 514 per cent, which works out to an annual average growth of about 15 per cent. The growth of electronics industry was marked by ups and downs. After recording a growth of 20 per cent in 1975, it dropped to 12 per cent the following year. Also the growth rates recorded in 1979 and 1981 were unsatisfactory. During 1982, the industry registered a rise of 40.8 per cent over the previous year; however, this figure does not give a realistic picture because the growth rate during 1981 has given a low base for growth measurement, and also due to the fact that the turnover of the industry during that period was boosted by colour TV receivers worth Rs. 40 crores, which were assembled in India using imported SKD kits to meet the local demand during the Asian Games. Excluding this, the growth rate achieved during that year comes to around 36% only.

Electronic Goods Output up

The production of electronic products has increased from Rs. 1,205 crores in 1982 to Rs. 1,360 crores in 1983, an increase of 12.9 per cent. The consumer electronics output, however, declined slightly from Rs. 337 crores in 1982 to Rs. 330 crores in 1983. The main cause for this decline has been a fall in the production.

According to the 1983-84 Report of the Department of Electronics, various factors contributed to the relatively low overall growth in electronics in 1983. The strike in Peico Electronics alone resulted in a production drop of Rs. 20 crores, including that of components. There has been an interim slump in the television market due to uncertainities in pricing resulting from tax concessions announced in the third quarter of 1983. While the production of black and white TV receivers increased from 0.57 million in 1982 to 0.66 million in 1983, the tape recorders output jumped up from 0.70 million to 0.90 million during the period. The production of computers registered a growth of 62.5 per cent in 1983, and that of control and instrumentation increased by 29.4 per cent. The growth rate in production of communication and broadcasting equipment was 5.8 per cent, whereas the output of aerospace and defence equipment shot up by 16.1 per cent.

Consumer Electronics

The production of consumer electronics dominates the electronics scene of the country, its share in total electronics production being nearly 30 per cent. In the period 1970-1982, consumer electronics registered a compound growth rate of around 13 per cent, having grown from Rs. 80 crores to Rs. 337 crores. In the earlier period of its growth, the Indin consumer electronics was confined to the production of radio receivers, PA systems, amplifiers and record players. It has now been enlarged to include TV sets, tape recorders, calculators, car radios, electronic watches, watches, clocks, gas lighters etc. The more recent additions to this set are colour TV sets and Video Cassette Recorders. Although the increase in the production of all items of consumer electronics has been nearly simultaneous, TV receivers and radio receivers account for the largest chunk of production in this category, accounting for nearly 80% of the output in this sector. Over 90% of the production of this sector comes from private sector units, and interestingly, 60 per cent of this is contributed by the private sector.

Hindustan Machine Tools, in the public sector, is likely to be entrusted with the task of manufacturing video deck mechanism. Four foreign companies had shown interest in technology transfer for this mechanism and to begin with, a capacity of one lakh per annum is to be installed at the HMT. Once these are produced indigeneously, video cassette recorders and players can be produced within the country at economic prices. Though more than 50 companies have been given approvals for manufacturing VCR's, there is hardly any indigenous content in the products apparently because of the non-availability of major components and lack of economies of scale. These companies have been given approvals for manufacturing only 500 VCR's a year.

Communication and Broadcasting Equipment

The contribution of Communication and Broadcasting Equipment to total electronics production increased from around 18 per cent in 1970 to nearly 27 per cent in 1976 ; however, it declined in the subsequent years and was just around 22% in 1982. In the period 1970-82, the value of production had increased from Rs. 35 crores to Rs. 255 crores. Items now being manufactured includes telephone, teleprinters, exchange line equipment, microwave transmission equipment, electronic PBX's and PABX's so on. Almost the entire production of telecommunication and broadcasting equipment is being undertaken by public sector units such as the Bharat Electronics Ltd., Indian Telephone Industries, Electronics

Corporation of India Ltd. and P & T workshops in the country.

Telecommunication Equipment

Development of communication infrastructure being crucial to the growth of vital sectors like agriculture, industry etc., due priority was assigned to communication services in the successive Five Year Plans, resulting in substantial expansion of telecommunication facilities. In the Fifth Five Year Plan period (1974-79) the total allocation was Rs. 1149.45 crores and in the Sixth Five Year Plan period (1980-85) the total allocation for Telecommunications (including INSAT) is Rs. 2,336 crores. The important objective of telecommunication planning is to update the technology in the services by way of introducing modern techniques through SPC Electronic Telexes, Digital Trunk Exchanges, Digital Microwave Systems, Satellite Communication etc. During the plan period, the Palghat Unit of the Indian Telephone Industries Ltd., (ITI) which is engaged in the manufacture of smaller type of electronic exchange, is to be expanded. Two large electronic switching factories with a capacity of 5 lakh lines each are proposed to be set up during the plan period. The second phase of the Rae Bareli unit for creating a capacity of 2 lakh lines of crossbar equipment is also to be taken up. The major areas in the plan of Indian Telephone Industries relate to digital and rural communication hardware like Telephone subscriber apparatus and instrumentation, telemetry, power line carrier communication systems and integrated communication systems. Hindustan Teleprinters Ltd. proposes to set up functional laboratories and facilities such as pilot production shop, prototypes machine shop, PCB facilities etc. The programme of wireless monitoring organisation pertain to formulation of interference criteria, simulation studies, channelisation plans in VHF and UHF bonds and so on.

Aerospace and Defence Equipment

This is the sub-sector contributing the lowest to total electronics output. However its contribution is significant in terms of its application-value. In the period of 1976-81, it grew marginally from Rs. 49 crores to Rs. 69 crores ; there was virtual stagnation in production during the four year phase of 1978-81. During 1982 however, production of these items recorded a growth of 57 per cent over the previous year. Still its share in the overall electronics production continued to be below 10%. This sector is the exclusive purview of the public sector.

Computers, Control and Instrumentation

Computers are comparatively new entrants in the Indian market. The production as of now is limited to small and medium computers. IBM and ICL which were towering over the computer market until 1977, closed down their Indian operations that year. ECIL commenced manufacture of small computers in 1971, a number of other private and public sector units followed thereafter At present there are about 70 companies which have started manufacturing computers.

About 25 per cent of all computer installations in India today were manufactured within the country. However, domestic capability to manufacture computer systems is limited. The percentage of imported components is very high and almost all peripherals are imported. India's trump card, however, is software. Almost all our computer exports are accounted for by software, with firmware contributing the rest. Commercial software development units in the country include Tata Consultancy Services (TCS) and the Operations Research Group (ORG). Among the systems manufacturers, the Government owned Electronics Corporation (ECIL) is the largest. Other manufacturers include the Shriram Group (DCM, Data Products), the Sarabhai Group (ORG) and Hindustan Computers Limited.

The Electronics Corporation of India Ltd., Hyderabad has a range of 4 computers : (i) The BDP-100, which is the cheapest business machine currently available, (ii) TDC-312, (iii) TDC-316 and (iv) System 332 Computer, the biggest among the systems developed by the Indian Computer Industry. DCM Data Products have developed two systems, the Galaxy 11 and Spectrum 7, and Hindustan Computers Ltd., a joint sector enterprise, have developed a mini computer called the System 4. The Computer Maintenance Corporation set up by the Government of India in 1976, provides a complete range of support services connected with all aspects of computers such as cost-effective enhancements for complete systems, system installation and commissioning, hardware maintenance, systems consultancy and software development.

The outlook for the microprocessor computer manufacturing sector is very bright as there is going to be a huge increase in the demand for these systems from just 200 in 1980-81 to an estimated 3,500 in 1989-90, adding upto a huge total of 15,200 systems during the ten-year period. On the other hand, (the demand for large and medium sized systems is likely to increase marginally from 50 in 1980-81 to about 100 in 1989-90. Hence there will have to be an adequate build-up of manpower to be able to meet this anticipated increase in computer systems.

Source : 'The Hindu' Survey of Indian Industry, 1983.

In terms of value, production of computers including micro-processor based systems was of the order of Rs. 48 crores in 1982. This was against the figure of Rs. 28.5 crores the previous year and represents a significant increase. Even today, production depends to a large extent on foreign technology and imported components. Seventy per cent of the requirement for computer peripherals is being met through imports. The fields of control and instrumentation cover process control instruments, industrial electronics, medical electronics, testing and measuring instruments. Progress in this sector was better and therefore, the combined production of the sector covering computers, controls and instrumentation recorded fairly good progress in the past few years and now accounts for around 21 per cent for the total production of electronics in the country.

Components

Indigenous production of electronic components has not kept pace with the growth in other sectors of the industry. Although components production showed an increase of around 24 per cent in 1982, its share in the overall electronics output dropped to 18% from the previous year's level of 21%. Moreover most of the products manufactured indigenously are for use in consumer electronics. To a large extent therefore component requirements of other equipment sectors are being met through imports. The basic reason for the inadequate growth of components production is the capital intensive nature of this sector. Production of professional grade components is uneconomical unless it is the by-product of large volume consumer grade components. In India there is no mass-scale production of consumer grade components due to low demand and hence this entire sector remains unattractive. The low-volume of production has also prevented investment in R & D and updating of technology.

Government Steps

The Government announced an electronics package in August 1983, under which the customs duty on eight raw materials used by the electronic component industry was reduced to zero from the previous level of 65-100 per cent. The levy on nine other imported raw materials was slashed to 15 per cent and that on 75 others to 40 per cent. As an extension of this package, the Government is now considering further reduction of the customs duty on a few raw materials to zero level to further accelerate the rapid development of electronics.

The 1983 package had however given rise to certain anomalies in the levy structure in the case of certain products and components, quite unexpectedly. Items so affected include tape deck mechanism, floppy disc and other such products. Dr. M. S. Sanjeevi Rao, Union Deputy Minister for electronics has given an assurance to rectify these anamolies. A target of Rs. 10,000 crores has been fixed in respeet of gross turn-over for component industry by 1990. To achieve this, fresh investment of Rs. 400-500 crores should quickly be made in the component industry.

An inter-departmental committee set up by the DOE had recently visited Japan and Europe to study the technology and production methods of Video deck mechanism. Government is expected to announce a policy soon on the indigenous manufacture of these items which would find large scale use in the country's educational scientific institutions.

Conclusion

The Government has to be applauded for taking a major decision during 1983-84 relating to substantial reductions in Central levies on a large number of electronic items. This was with primary intention of bringing down the cost of inputs to the minimum and to infuse a controlled amount of competition in the industry, so that the prices to the end-users will be substantially less. The expectation was that the component industry in particular, will benefit immensely from these duty reductions, since the component industry is vital to the growth of electronics, the industry as a whole was expected to get a boost.

However welcome as these are, fiscal reliefs alone cannot be expected to go very far towards bringing about a vigorous growth of the industry comparable to that in developed countries. The industry has to aim at high volume production at the most economic level and for this incorporation of contemporary technology is of supreme importance. In the case of computers, the Government has rightly recognised the necessity for foreign technology and invited leading multinationals to set up manufacturing facilities for large and medium computers for taking care of data processing as well as concurrent and recurrent jobs such as pay-rolls of giant organisations employing more than 10,000 people as also for processing scientific, geo-physical and scientific data handled by the space centres, ONGC and Oil India.

A similar realistic approach is required in case of basic and components industries too. In these areas, however, the policy may be modified to suit specific requirements. As the presence of giant multinationals is not required in these areas, collaboration arrangements for transfer of technology and progressive indigenisation should be encouraged and facilitated.

ACCUMEASURES PUNJAB LTD.

INCORPORATED in 1973. **Directors :** T.K.A. Nair (*Chairman*), P. S. Bajwa, D. D. Sharma, K. K. Varshney (*Nominee* of I.F.C.I.), S. N. Singh (*Nominee* of I.D.B.I.), B. S. Brar, D. S. Brar (*Managing Director*). **Secretary-cum-Financial Controller :** S. R. K. Agnihotri. **Registered Office and Factory :** B-75, Phase VII, Industrial Focal Point, Sahibzada Ajit Singh Nagar (Mohali), District Ropar (Punjab). **Auditors :** Messrs. J. R. Khanna & Co.

Objects and Activities : Manufacturing and dealing in precision instruments, besides all kinds of measuring apparatus etc.

The company has set up a plant with an installed capacity to produce 79,000 instruments (in nos.) annually and the installed capacity of Vernier Depth guages is 2,000 Nos.

The company has technical collaboration with M/s. P. E. Consulting Group Ltd., U.K.

CAPITAL : Authorised : Rs. 1,50,00,000 in 13,00,000 Equity shares of Rs. 10 each and 20,000 Redeemable Cumulative Preference shares of Rs. 100 each. **Issued, Subscribed and Paid-up :** Rs. 41,00,000 in 286 Equity shares of Rs. 10 each subscribed by the signatories to the Memorandum of Association as fully paid-up for cash at par, 2,05,000 Equity shares of Rs. 10 each subscribed and allotted to Punjab State Industrial Development Corporation Ltd. (PSIDC), as fully paid for cash at par, 2,04,714 Equity shares of Rs. 10 each subscribed and allotted to the promoter, Shri D. S. Brar, their associates and friends, as fully paid-up for cash at par. **Issue** (1979) : Rs. 41,00,000 comprising of 4,10,000 Equity shares of Rs. 10 each for cash at par. (Out of the above issue Rs. 82,000 comprising of 8,200 Equity shares of Rs. 10 each have been reserved for allotment to PSIDC, for cash at par, and the amount offered to the public for subscription for cash at par is Rs. 40,18,000 in 4,01,800 Equity shares of Rs. 10 each.

ACME MANUFACTURING CO. LTD.

FOUNDED in 1919 at BOMBAY. **Directors :** J. V. Patel (*Chairman*), M.B. Bhaskare, P. Sukumaran, B. S. Munshi, Ashok J. Patel (*Managing Director*), B.K.S. Jain and K. Sadagopan. **Secretary :** K. P. Rajagopalan. **Registered Office :** Kurla Kirol Road, Ghatkopar (West), Bombay-400 086. Telephone : 583191. **Factory:** Wadala. Telephones : 442717 & 442718. Telegrams : 'ACMERAY'. **Auditors :** Messrs. Shah & Co.

Objects and Activities : The Company manufactures Diesel Oil Engines, Mechanical Lubricators, Engine Valves and Push Rods.

The company's Crane and Gas Generator Divisions are situated at Ghatkopar, Bombay and the Automative Valve, Electronics and Construction Machinery Divisions at Wadala in Bombay.

CAPITAL : Authorised : Rs. 1,50,00,000 in 6,000—6% Cumulative Preference shares of Rs. 100 each, 4,000—4½% Cumulative Second Preference shares of Rs. 100 each, 27,601—11% Cumulative Redeemable Third Preference shares of Rs. 100 each and 11,23,990 Equity shares of Rs. 10 each. **Issued, Subscribed and Paid-up :** Rs. 1,02,40,250 in 6,48,015 Equity shares of Rs. 10 each and 6,000—6% Cumulative Preference shares of Rs. 100 each, 4,000—4½% Cumulative Second Preference shares of Rs. 100 each fully paid-up and 27,601—11% Cumulative Redeemable Third Preference shares of Rs. 100 each fully paid-up.

Date of Accounts : 30th June. **Registration Fee :** *Nil*. **Split Charges :** Re. 1 per scrip.

AIR CONTROL & CHEMICAL ENGINEERING CO. LTD.

REGISTERED in 1961 at AHMEDABAD. **Directors :** R. Venkataswamy Naidu (*Chairman*), Dr. C. Rossi, John K. John (*Alternate* : R. N. Rathnam), B. N. Khosla (*Nominee* of I.F.C.), G. Viswanathan (*Nominee* of I.F.C.), S.S. Pardeshi (*Nominee* of Gujarat Government), M.R. Shroff, H. C. Asher and Dr. Ing. Marino Dall Oglio. **Secretary :** S. C. Marfatia. **Registered Office :** 'ACCEL HOUSE', New Patel Society, Ahmedabad-380 006. Telegrams : 'AIR CONTROL'. Telephones : 445688 and 447883. **Auditors :** Messrs. Nanubhai & Co.

Objects and Activities : Manufacture of fans blowers, compressors for refrigerators, cooling tower etc. They also undertake the designing and erection of turnkey projects for cold stores, ice plants and other tailor made projects, besides manufacturing castings of special grades in ferrous and non-ferrous items. The company has collaborations with (1) Sheldons Engineering Company, Canada, (2) Air and Refrigeration Dvu, U.S.A., (3) Aktieselekabat Thomas, The Sabore and Company.

CAPITAL : Authorised : Rs. 2,00,00,000 in 1,50,000 Equity shares of Rs. 100 each and 50,000—9.5% Cumulative Redeemable Preference shares of Rs. 100 each. **Issued :** Rs. 1,48,29,000 in 1,28,290 Equity shares of Rs. 100 each and 20,000—9.5% Cumulative Redeemable Preference shares of Rs. 100 each, redeemable after twelve years but in no event later than fifteen years from the date of issue. **Subscribed :** Rs. 1,48,03,125 in 1,28,290 Equity shares of Rs. 100 each fully paid-up and 20,000—9.5% Cumulative Redeemable Preference shares of Rs. 100 each, (Redeemable after 12 years but in no event later than fifteen years from the date of issue), *less ;* Allotment money and calls in arrears by others : Rs. 25,875.

Date of Accounts : 31st March.

AGRICULTURAL DISCS (INDIA) LTD.

INCORPORATED in 1964. **Directors :** J. C. Agarwal (*Chairman*), Dr. V. B. Ghate (*Nominee* SICOM), R. S. Patil, H. S. Ayrton, L. R. Patel, A. U. K. Patel, B. B. Arora (*Nominee* of IFCI), M. L. Patel (*Managing Director*), J. M. Patel (*Managing Director*). **Registered Office and Factory :** Plot No. 65, Industrial Area, Satpur, Nasik-422 007, Maharashtra State. Telephone : 88183. Telegrams : 'PLOWDISC'. **Bombay Office:** United Bank of India Bldg., 3rd Floor, Sir P. Mehta Road, Bombay-400 001. **Auditors :** Messrs. R. T. Joshi & Co.

Objects and Activities : Manufacture of special steel discs suitable for agricultural implements such as ploughs and harrows.

The company has technical collaboration with M/s. W.A. Tyazack & Co. Ltd., Sheffield.

CAPITAL : Authorised : Rs. 25,00,000 in 2,00,000 Equity shares of Rs. 10 each. 40,000—9.5% Redeemable Cumulative Preference shares of Rs. 10 each, 10,000 Unclassified shares of Rs. 10 each. **Issued, Subscribed and Paid-up :** Rs. 18,00,000 in 1,40,000 Equity shares of Rs. 10 each fully paid-up (of the above 5,000 shares were issued as fully paid-up pursuant to a contract without payment being received in cash) and 40,000—9.5% Redeemable Cumulative Preference shares of Rs. 10 each fully paid-up.

Date of Accounts : 31st December.

ALFRED HERBERT (INDIA) LTD.

INCORPORATED as a private limited company in 1919 and converted into a Public Company in 1972. **Directors :** B. P. Ray (*Chairman*), A. C. Puri (*Managing Director*), W. T. Lees, H. A. Beyer, M. K. Ramachandra, K. J. George, V. K. Kalra, R. Kaul, R. C. Khanna, A. Khanna, D. J. Pal, A. S. Lakshmanan ((*Alternate* to H. A. Beyer), S. Talwar (*Alternate* to W. T. Lees). **Registered Office :** 13/3, Strand Road, Calcutta-700 001. Telegrams : 'MACHINE'. Telephones: 23-4801 (5 lines). Telex : 021-7314. **Auditors :** Messrs. Price Waterhouse & Company.

Objects and Activities : The company is engaged in marketing and rendering technical services of imported and indigenous machine tools, industrial machinery, rubber and plastic machinery, pulverising equipment, machine shop equipment, small tools, etc. It has also undertaken the manufacture of intermixes, shear strip tyre vulcanising presses, tube vulcanising presses and other rubber processing machinery under a technical collaboration agreement with Francis Shaw and Company (Manchester) Limited. The company also manufactures and markets jigmils in technical collaboration with Devlieg Machine Company, U.S.A. The factory is located at Whitefield Road, Mahadevapura, Bangalore.

CAPITAL : Authorised : Rs. 1,50,00,000 in 15,00,000 shares of Rs. 10 each. **Issued and Subscribed :** Rs. 1,05,00,000 in 15,000 Equity shares of Rs. 10 each, issued without payment being received in cash, 4,50,000 Equity shares of Rs. 10 each issued as bonus shares by capitalisation of Reserves and 5,85,000 Equity shares of Rs. 10 each issued for cash.

During 1976, 2,00,000 Equity shares of Rs. 10 each were issued as Bonus @ 2 : 5 to the then existing shareholders.

Date of Accounts : 31st March. **Transfer Fee :** *Nil.* **Sub-division/New Certificate Fee :** Rs. 2 per certificate. **Dividend declared :** 1983—15 per cent, 1982—20 per cent and 1980—12.5 per cent.

THE ALUMINIUM INDUSTRIES LTD.

INCORPORATED in 1946. **Directors :** S. Narayanaswamy (*Chairman*), K. P. Ramachandran Nair, V. Pappu, R. Madhavan Nayar, Russi Jal Taraporevala, N. Sundareswaran, N. J. Nair, K. P. Sreedharan Nair, B. Ramu, M. De La Salle (*Nominee* of Alsthom Altantique), K. Ramachandran (*Nominee* of Kerala Govt.), N. Sundaresan (*Nominee* of LIC), S. Peer Mohammed (*Managing Director*). **Secretary and General Manager :** R. Viswanathan. **Registered Office :** No. 1, Ceramic Factory Road, Kundara-691 501, Quilon District, Kerala. Telephones : 201 (Kundara), 3977 (Quilon). Telex : 0886-241. Telegrams : 'ALUMINIUM'. **Auditors :** Messrs. K. Venkatachalam Aiyer & Co. and Messrs. T. Velu Pillai & Co.

Objects and Activities : Manufacture of conductors and accessories, aluminium rods, cables, steel wires, wire working machinery, material handling equipment, high voltage switchgears transformers and static relays. The company also undertakes consultancy and engineering services for conductor plants, steel wire plants and material handling systems.

The factories are situated in Kundara, Mannar and Vilappilsala (all in Kerala), Hirakud and Hyderabad. The company has drawn up plans for the manufacture of SF 6 Circuit breakers, alloy iron and steel castings. A letter of intent has been received for the manufacture of wire resistant and alloy castings and technical collaboration agreements have been reached with Firth, Brown castings Ltd., U.K. for this project. The company also has collaboration arrangements with (1) Alsthom Atlantique, France for switchgears and static relays (2) Miyazaki Iron Works, Japan, for wire working machinery (3) Brondel, France and Takashima Sangyo Co. Ltd., Japan, for wire working machinery (4) J.F.B. Technology International Ltd. U.K. for alloy castings and (5) Kurimoto Iron Works Ltd., Japan, for material handling equipment.

CAPITAL : Authorised : Rs. 7,00,00,000 in 50,00,000 Equity shares of Rs. 10 each and 2,00,000—9.5 per cent Redeemable Cumulative Preference shares of Rs. 100 each. **Issued :** Rs. 3,54,78,340 in 26,99,264 Equity shares of Rs. 10 each and 84,857—9.5 per cent Redeemable Cumulative Preference shares of Rs. 100 each. **Paid-up :** Rs. 3,53,50,445 in 26,99,264 Equity shares of Rs. 10 each, *less*: Calls in Arrears Rs. 220 and 83,597-9.5 per cent Redeemable Cumulative Preference shares of Rs. 100 each, *less*: calls in arrears Rs. 1,675.

(Of the above, 2,89,285 Equity shares were allotted as fully paid-up by way of Bonus shares by capitalisation of Share Premium Account, 1,53,551 Equity shares were allotted for consideration other than cash to collaborators Delle-Alithom of France, towards part payment of engineering charges and know-how fees and value of capital goods.)

Date of Accounts : 31st March. **Transfer, Sub-division** or **New Certificate Fee :** *Nil*.

Dividend declared : (Equity) : 1983—*Nil*, 1982—15 per cent, 1981—10 per cent and 1980—*Nil*.

The company has participated in a joint venture in Bauchi state, Nigeria, named Alind (Nigeria) Ltd., set up for the manufacture of conductors and cables.

Koylon Trading Agencies Ltd., is a wholly owned subsidiary of the company.

The Aluminium Industries Ltd.

Ashok Leyland

Manufacturers of
the widest range of
trucks and buses
in India.

SAA/AL/2400

ASHOK LEYLAND LTD.

ESTABLISHED in 1948. **Directors :** R. J. Shahaney (*Chairman and Managing Director*), A. M. M. Arunachalam (*Deputy Chairman*) P. C. Capon, P. K. Choksey, R. J. Hancock, S. M. Patil, P. D. Plant, Mrs. Raksha Saran, Mantosh Sondhi, N. Subrahmanyam B. Sundara Rao. **Executive Directors :** J. Joseph, T. S. Kannan, R. Ramakrishnan, R. Seshasayee, C. B. Ayapa. **Secretary :** K. N. Gopalan. **Registered Office :** 19, Rajaji Salai, Madras-600 001. Telephones : 29141-8. Telegrams : 'ASLECOR'. **Auditors :** Messrs. M. S. Krishnaswamy & Rajan, and Messrs. Price Waterhouse & Co.

Objects and Activities : The company manufactures heavy duty commercial vehicles, medium duty diesel engine commercial vehicles, industrial and marine engines and spare parts thereof. The works are situated at (i) Ennore, Madras, (ii) SIPCOT Industrial Complex, Hosur, (iii) MIDC Industrial Area, Bhandara, Maharashtra and (iv) Matsya Industrial Area, Alwar, Rajasthan.

Capacities	*Licensed*	*Installed*
Medium duty vehicles ..	45,000	18,500
Heavy duty vehicles ..	2,000	2,000
Engines ..	3,228	3,300

The company has collaboration arrangements with Leyland Vehicles Ltd., U.K. for the manufacture of integral buses. An initial batch of 'Tusker Super' vehicles has already been manufactured to the design of Zahnradfabrick Friedrichshafen AG of West Germany, incorporating syndromesh transmissions. The company is setting up a joint venture with a government owned concern in Sri Lanka for assembly and progressive manufacture of Ashok Leyland vehicles.

It has been proposed to invest 25% of the Issued Capital in Automative Castings Ltd., a joint venture with TIDCO. 26 per cent of the Issued Capital will be subscribed to by TIDCO, while 49 per cent will be offered to the public through a prospectus or to the public financial institutions. The company will also be investing to the extent of 26 per cent in Ashok Leasing and Hire Purchasing Co. Ltd., promoted by the dealers of the company.

CAPITAL : Authorised : Rs. 2,500 lakhs in 2,50,00,000 Equity shares of Rs. 10 each. **Subscribed :** Rs. 1650.04 lakhs in 1,65,00,000 Equity shares of Rs. 10 each, plus forfeited shares of Rs. 0.04 lakhs.

In 1976, the Authorised capital was increased to Rs. 15 crores by the creation of one crore Equity shares of Rs. 5 each. At the same time 31,15,405 Equity shares of Rs. 5 each were issued as Bonus at 1 : 5 to holders as on 12th August 1976. In 1978, Authorised capital was increased to Rs. 25 crores by the creation of two crore Equity shares of Rs. 5 each. Another Bonus issue was made at the proportion 1 : 2 to holders as on 30th December 1978. In 1979, in order to reduce the foreign shareholding to 51 per cent as also to raise finance to increase the then existing capacities, 49,61,349 Equity shares of Rs. 5 each were issued at a premium of Rs. 3 per share. In 1981, the Equity shares were consolidated to a face value of Rs. 10 each.

Date of Accounts : 31st December. **Transfer, Sub-division/New certificate Fee :** *Nil.*

Dividend declared : 1982—18 per cent, 1981—20 per cent, 1980—20 per cent and 1979—17 per cent.

Analysis of Working *Year ending : 31st December*

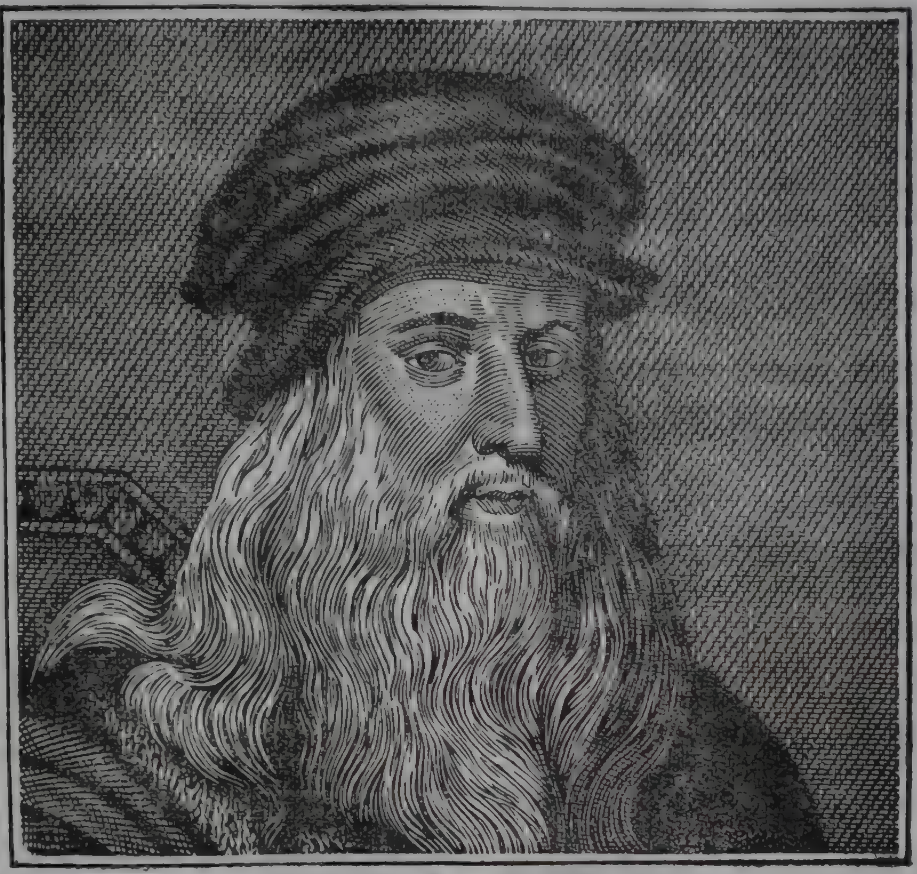
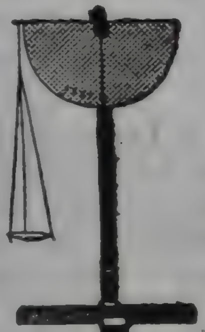
Dividend declared : 1982—30 per cent, 1981—25 per cent, 1980—20½ per cent and 1979—20 per cent.

Meet Avery's first Design Engineer



Leonardo da Vinci
1452-1519



A many-sided genius, the likes of whom the world will never know again, Leonardo da Vinci's brilliance was centuries ahead of his time.

The world's first self-indicating scale, which does away with the manipulation of weights, was sketched and designed by da Vinci five centuries ago.

At the beginning of the Industrial Revolution, two and a half centuries ago, two other pioneers, William and Thomas Avery, developed this idea further, eventually resulting in the self-indicating dial scale which revolutionised commercial and industrial weighing across the world.

Today, Leonardo's design of "load and look" is perfected in the Avery self-indicating dial scale.

He designed it. We perfected it.

Da Vinci, Avery salutes you.

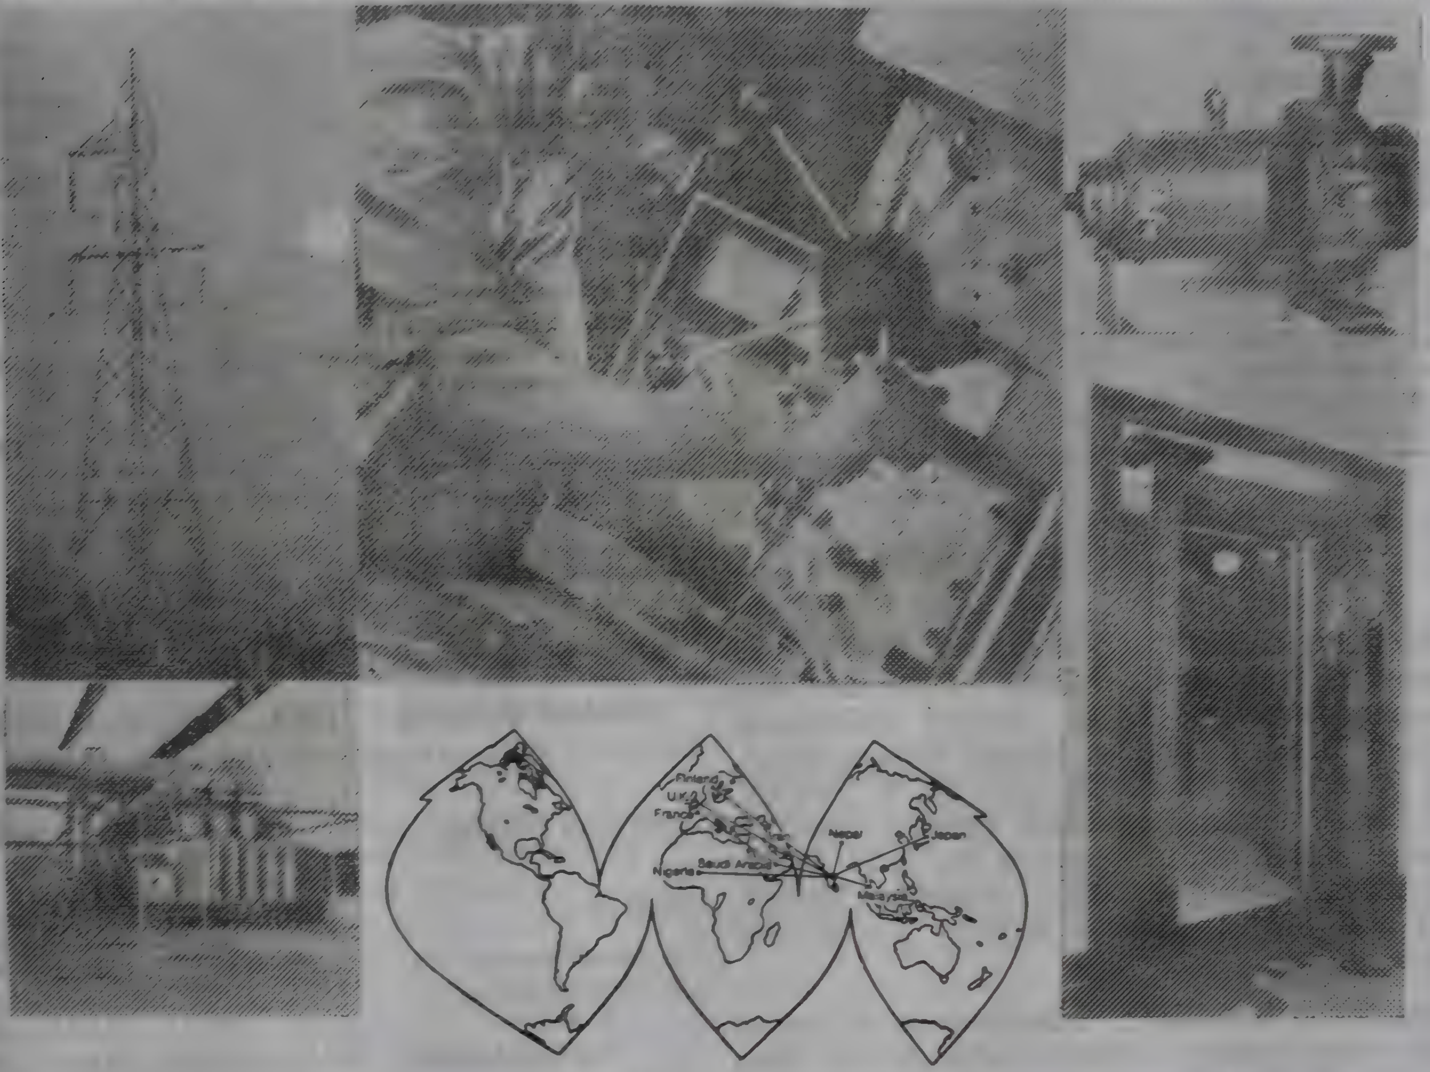
BEST & CROMPTON
THE HIGH-TECH SOURCE



Just when you think they've outdone themselves, they push the graphs up higher still.

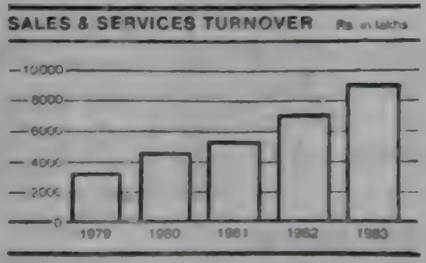
Best & Crompton's 4134 keen performers

Expanded operations, a 130% spurt in sales, a trebling in profits — all in the last five years. Best & Crompton's performance can be compared only with a handful of Indian corporations.

It has been achieved by investing not only in new lines, R&D, foreign collaborations and knowhow but also in the best talent available in each discipline.

Over 4000 persons, including more than 1000 skilled engineers, surely and steadily lead the company to new achievements year after year.

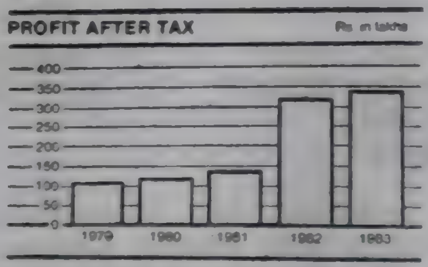
Activities include the manufacture of a variety of engineering equipment (castings, heavy-duty pumps, auto-electricals, valve actuators, busducts, control panels, train lighting alternators — among others); turnkey services in every branch of engineering; and project management, for which the company has been long recognised the world over.



SALES & SERVICES TURNOVER Rs. in lakhs

Their overseas connections extend to UK, Japan, France, Iran...

In other words, every peak is only a stepping stone to new heights.



PROFIT AFTER TAX Rs. in lakhs

BHARAT ELECTRONICS LTD.

REGISTERED in 1954. **Directors :** S. Krishnan (*Chairman and Managing Director*), V. S. Bhir, A. K. Pandya, Lt.-Gen. M. S. Sodhi, Air Marshal Satish C. Lal, Vice-Admiral Narendra Bhalla, Dr. R. P. Shenoy, S. K. Datta (R and D), M. N. Kesari (*Executive Director*—Bangalore Complex) and Col. S. D. Maini (*Executive Director*—Northern Units). **Secretary :** N. P. Manjunatha. **Registered Office :** 'Trade Centre', 29/4, Race Course Road, Bangalore-560 001. **Auditors :** Messrs. Sampathkumaran & Company and Messrs Rao & Swami. **Branch Auditors :** Messrs. Jagdish Prasad & Company and Messrs. Brahmayya & Company.

Objects and Activities : Manufacturing professional grade electronic components and equipments. The Government of India has sanctioned the establishment of a new unit at Taloja, Maharashtra for the manufacture of Black and white T.V. glass bulbs with a licensed capacity of one million bulbs per year under licence with Messrs Corning Glass Works, USA. The unit is expected to commence trial production in December 1985. The Government has also sanctioned establishment of two new units for production of equipments at Panchkula, Haryana and Garhwal, Uttar Pradesh. The Government of India having promulgated the Andhra Scientific Company Limited (Acquisition and Transfer of Undertakings) Act, has transferred the right, title and interest of the said company to this company effective from 1st July 1981. This unit is engaged in the manufacture of optical/opto-electronic equipments. The significant achievements of the year are, development of satellite relay receiver for Doordarshan for re-broadcast of TV transmissions and development of other items like video switcher, B and W monitor, junction box for TV antenna, etc. for Doordarshan ; development of a microprocessor based accounting and listing machine for the P & T ; a 100 W solid state ground-to-air communication transmitter ; engineering of the switching system for the Army and the Unit level switch board developed by the LRDE and development of a modulation transformer of the 100 KW medium wave broadcast transmitter.

The first lot of 100 electronic voting machines developed and produced by the company were successfully employed in the Parliamentary and Assembly elections conducted in Kerala, Karnataka and Arunachal Pradesh. The company has also developed different types of hybrid microcircuits and liquid crystal displays. A number of development projects are in the final stage of completion.

CAPITAL : Authorised : Rs. 15,00,00,000 in 1,50,000 Equity shares of Rs. 1000 each. **Issued, Subscribed and Paid-up :** Rs. 15,00,00,000 in 1,50,000 Equity shares of Rs. 1000 each.

Date of Accounts : 31st March.

Dividends declared : 1983—12 per cent,

BHARAT STEEL TUBES LTD.

INCORPORATED in 1959 at NEW DELHI as a Private company and converted into a Public Company in 1962. **Directors :** Mr. Raunaq Singh, (*Chairman*), Mr. Onkar S. Kanwar (*Managing Director*), Mr. C. P. Shah, Mr. D. N. Kapur, Mr. Indarjit Singh, Lt.-Gen. J. S. Aurora, Mr. N. D. Abbey, Mr. Prem Pandhi, Mr. Raghu Raj Bhalla, Mr. S. S. Kanwar, Mr. Stephen Stranahan, Mr. G. S. Cheema, **President :** Mr. H. R. Shiv. **Secretary :** Mr. P. C. Mathur, **Registered Office :** Allahabad Bank Building, 17, Parliament Street, New Delhi-110 001. Telegrams : 'TUBEMAKERS' Telephones : 310014, 310310, 310318. **Auditors :** Messrs. Mohinder Puri & Company. BST Engineering Services : Chiranjiv Towers, 43, Nehru Place, New Delhi.

Objects and Activities : Manufacture of steel tubes and pipes, both galvanised and black, for gas, water, steam, oil and petroleum. The works are at Ganaur, Haryana. There is a separate Engineering Services Division located at Delhi :

Items	*Licensed Capacity*	*Installed Capacity*
Steel pipes and tubes (Tons)	1,44,000	1,44,000
Fabricated pipe work (Tons)	3,000	3,000
Tubular structures (Tons)	6,000	6,000
Steel pipes and tubes manufacturing plant (units)	6	6
Galvanising plant (Rs. in lakhs)	180	180
PVC/HDPE pipes	4,000	4,000

The company has taken steps to diversify into precision tubes and for higher production of API pipes used for oil pipelines. An industrial laminates project with 2,000 tonnes annual capacity is soon to be implemented with technical collaboration arrangements. It has also been decided to acquire a 27000 DWT ship as part of further diversification.

CAPITAL : Authorised : Rs. 10,00,00,000 in 2,50,000 Cumulative Redeemable Preference shares of Rs. 100 each and 75,00,000 Equity shares of Rs. 10 each. **Issued and Subscribed :** Rs. 4,35,00,000 in 65,000—11 per cent Redeemable Preference shares of Rs. 100 each and 37,00,000 Equity shares of Rs. 10 each: (Of these 13,50,000 Equity shares of Rs. 10 each have been allotted as fully paid Bonus shares by capitalisation of Reserves and out of Profits on reissue of forfeited shares. **Bonus Issue :** In 1973-74, 13,50,000 Bonus Equity shares were issued in the proportion 1 ; 1.

Date of Accounts : 30th June. **Transfer fee :** *Nil.*

Messrs Reliance Overseas Limited is a subsidiary of the company. The company has promoted Bharat Gears Ltd., for the manufacture of automobile gears and was one of the Promoters of Apollo Tyres Ltd. The company has also subscribed to the Equity of Apollo Tubes Ltd., a project for the manufacture of steel pipes. The company supplied technical know-how, engineering services and supervision for the implementation and commissioning of this project.
